

Sustainability Report — University of California, Berkeley

Prepared **with reference to** the GRI Standards · compiled 2026-08-30

About this report. It is generated from University of California, Berkeley's public AASHE STARS 3.0 submission, mapped onto the GRI Standards. It covers 78 GRI disclosures across 13 standards. Where a disclosure cannot be answered from STARS data, the report says so and why, rather than omitting the question. **How the figures got here — and why they can be trusted.** Every number in this document was copied by code from the extracted STARS dataset. The language model that wrote the prose was never shown a figure: it wrote named placeholders and the values were substituted afterwards, so it could not alter, round or invent one. After substitution the finished text is scanned, and the build fails if any number in it cannot be traced back to the source data. The model chose the sentences; it did not choose the numbers. **What that guarantee does not cover.** It applies to figures. Qualitative statements are drawn from the institution's own STARS narrative answers, but no mechanical check confirms that a sentence describing them is faithful. **"With reference to", not "in accordance with".** GRI reserves *in accordance* for reports answering every Universal Disclosure plus all disclosures for each material topic. This report does not, so it makes the weaker and correct claim. **Source and attribution.** [University of California, Berkeley STARS Report](<https://reports.aashe.org/institutions/university-of-california-berkeley-ca/report/2025-02-19/>), AASHE. STARS data is publicly accessible and used here with attribution to AASHE; it is not openly licensed.

The organisation and its reporting

Organisational Context and Boundary

The University of California, Berkeley is a public higher education institution. For sustainability reporting purposes, the institution defines its boundary based on operational control in accordance with GRI 2-2. This operational boundary encompasses the main campus in the City of Berkeley, the adjacent Hill campus, the Richmond Field Station, campus-operated stations and reserves, and campus-owned buildings across various locations. Operational features situated within this physical footprint include academic facilities and a museum (GRI 2-6).

Reporting Process and Timeframe

Preparation of the data for this report was led by the Office of Sustainability, with primary contributions from Marina Zdobnova, Sustainability Data and Program Manager, and Ashley Smiley, Postdoctoral Fellow (GRI 2-3). The reporting period varies across

specific disclosures based on data collection cycles; for instance, the performance year for Scope 1 and Scope 2 greenhouse gas emissions is 2023.

External Assurance

No independent audits or external assurance processes were used in the preparation of this report (GRI 2-5).

Reporting Limitations and Omissions

Certain elements required by the GRI Standards are not captured within the STARS dataset used for this report. Under GRI 2-1 and GRI 2-2, institutional metadata—such as legal name, headquarters location, countries of operation, alignment with financial statements, and minority interest consolidation—are not recorded. Under GRI 2-3, named preparers are recorded without direct contact details, no specific enquiry contact point is designated, and overall reporting frequency and publication dates are omitted. Restatements of information are not reported under GRI 2-4, as STARS submissions exist as standalone data snapshots. Under GRI 2-5, no external assurance was undertaken, and framework-level assurance parameters are not tracked. Finally, GRI 2-6 disclosures are limited to physical campus features rather than comprehensive value chain and market sector analyses.

Activities and workers

Workforce Scale and Composition

The University of California, Berkeley maintains a workforce to support its academic, research, and administrative functions. The operational scale of this staff is measured at 13,678.

Reporting Limitations and Data Gaps

While this metric provides an overall measure of labor capacity, it has notable limitations when aligned with standard reporting frameworks. Under Disclosure 2-7, full-time equivalent metrics do not reflect total headcount, as multiple part-time positions are combined into single full-time units. Furthermore, Disclosure 2-7 calls for specific disaggregations of employee figures by employment contract (permanent and temporary), employment type (full-time and part-time), gender, and region. The STARS data collection process gathers only a single aggregate figure, leaving these detailed demographic and contractual categories unreported.

A similar data gap exists regarding GRI 2-8, which covers workers who are not direct employees but whose daily tasks are controlled by the organization. Primary institutional data collection focuses on employees and students. While third-party contractor relationships are monitored, these figures represent the number of contracting firms

engaged rather than the actual count of individual workers operating on campus under those contracts.

Material topics

The University of California, Berkeley structures its sustainability disclosures around the framework provided by the Sustainability Tracking, Assessment & Rating System (STARS), administered by the Association for the Advancement of Sustainability in Higher Education (AASHE). Because the topics covered correspond to predefined credit categories established by AASHE for the higher-education sector as a whole, the institution did not conduct a separate internal materiality assessment to identify or prioritise its specific sustainability impacts. Consequently, the selection of topics reflects external sector standardisation rather than an institutional determination of material impacts.

Adopted Sustainability Objectives and Management Approach

While the institution has not executed a dedicated materiality assessment process, it maintains public commitments and measurable objectives across the core operational and functional areas defined within the STARS reporting structure. These areas encompass campus operations; teaching, learning, and research; racial equity and social justice; administration and finance; and campus and community engagement.

To address these areas, UC Berkeley aligns its governance with the systemwide Sustainable Practices Policy of the University of California alongside its own Sustainability Plan. Within campus operations, the university has established target goals for greenhouse gas emissions reduction, zero waste, and energy transition. The institution's Climate & Resiliency strategy focuses on accelerating a just and equitable transition towards clean energy, zero-carbon operations, and campus resilience.

Governance and implementation of these objectives are coordinated by the UC Berkeley Office of Sustainability. Led by the Sustainability Officer, the office provides campus leadership by setting institutional targets, developing strategic partnerships, and facilitating project implementation across academic, operational, and community dimensions.

Reporting Limitations and Framework Differences

Reporting against Disclosure 3-1, Disclosure 3-2, and Disclosure 3-3 involves several limitations due to reliance on the standardised STARS framework:

- Process to determine material topics (GRI 3-1): The university does not report on an internal process for identifying, prioritising, or consulting stakeholders regarding actual and potential impacts on the economy, environment, and people, as STARS contains no internal materiality assessment mechanism.
- List of material topics (GRI 3-2): The reported objective areas reflect fixed STARS credit categories rather than topics selected through an internal evaluation of

significant impacts. Furthermore, changes in material topics compared to previous reporting periods required under Disclosure 3-2-b are not detailed.

- Management of material topics (GRI 3-3): Management approaches are reported on an institution-wide basis rather than topic by topic. The framework does not collect data required by Disclosure 3-3 regarding specific actual and potential impacts, involvement through business relationships, distinctions between preventive and remediating actions, or lessons learned.

Governance

Governance Structure and Composition

The University of California, Berkeley operates within the governance framework of the University of California system under the authority of the Board of Regents.

Representation on the institution's highest decision-making processes encompasses academic staff, non-managerial worker representatives, and student representatives.

Academic staff participate in democratic university governance through established bodies, primarily the Berkeley Division of the Academic Senate. As part of the system-wide University of California Academic Senate, this body enables faculty members to carry out shared-governance responsibilities via representative councils, committees, and elections. Non-managerial staff and student representatives are likewise included as members of the highest decision-making governance structures.

Delegation of Responsibility for Sustainability

Responsibility for operationalising sustainability strategies and managing environmental impacts is delegated to dedicated officers and specialised offices. The Office of Sustainability leads efforts across the campus to reduce greenhouse gas emissions, enhance sustainable purchasing, and foster environmental responsibility in daily operations.

Leadership is provided by the Chief Sustainability and Carbon Solutions Officer, alongside dedicated sustainability officers within the Office of Sustainability, the Haas School of Business, and the Student Environmental Resource Center. At least one sustainability officer and office is explicitly charged with coordinating campus constituencies to advance sustainability across the entire institution. In relation to GRI 2-14, an executive cover letter was provided with the institutional submission.

Governance Reporting Limitations and Omissions

The source material provides information on governance representation and administrative delegation, but does not contain data regarding the operational behaviour

or detailed composition of the highest governance body. The specific limitations and omissions comprise:

- **Composition and Demographics (GRI 2-9):** The source records the inclusion of key constituencies, but does not provide numeric breakdowns regarding executive and non-executive status, independence, tenure, external commitments, or demographic characteristics such as gender and representation of social groups.
- **Delegation and Governance Oversight (GRI 2-13 and GRI 2-14):** The precise reporting line and reporting frequency between sustainability officers and the highest governance body are not stated. Additionally, the submission of an executive cover letter does not detail whether the governing body formally reviewed, approved, or discussed the material topics and contents of the sustainability report.
- **Governing Body Processes:** The source material does not report on the active oversight functions of the highest governance body. Consequently, no information is available for GRI 2-10 (nomination and selection criteria), GRI 2-11 (chair duties and conflict management), GRI 2-12 (oversight of impact management and stakeholder engagement), GRI 2-15 (conflict-of-interest mitigation), GRI 2-16 (escalation of critical concerns), GRI 2-17 (advancement of collective sustainability knowledge), or GRI 2-18 (performance evaluation of the governing body).
- **Remuneration (GRI 2-19, GRI 2-20, and GRI 2-21):** Institutional remuneration policies and the process for determining executive pay are not reported. Disclosure 2-21, regarding the ratio between the highest-compensated administrator and the lowest-compensated full-time employee, was left blank by the institution.

Strategy, policies and practices

Sustainability Vision and Strategy

The University of California, Berkeley sets out its sustainability direction through published strategic frameworks, including its Climate Action Plan and the UC Berkeley Sustainability Plan. These framework documents establish institutional goals for reducing greenhouse gas emissions across campus operations, improving energy efficiency, increasing the adoption of renewable energy, and encouraging sustainable transportation choices. The institution's overarching vision is coordinated by the Office of Sustainability under the direction of the Sustainability Officer, who leads strategy formulation, operational integration, and campus engagement. Operational accomplishments directed by this office include progress towards a clean, electrified campus energy system and external recognition in global university sustainability rankings.

In alignment with its strategic goals, the university is a signatory to the Second Nature Climate Leadership Commitments, specifically endorsing the Carbon Commitment. This pledge reinforces institutional efforts to lower carbon emissions and strengthen climate resilience. In accordance with Disclosure 2-22, the institution articulates a clear sustainability vision; however, the source documentation records these strategic goals without attributing the statement to a named executive or governance body signatory.

Policy and External Commitments

The university maintains several public sustainability commitments that incorporate external performance reporting. Through participation in the Sustainability Tracking, Assessment & Rating System (STARS), administered by the Association for the Advancement of Sustainability in Higher Education (AASHE), UC Berkeley publicly reports operational and institutional sustainability metrics. Additionally, the university submits verified annual greenhouse gas emissions inventories to The Climate Registry to ensure standardized monitoring and transparent reporting of operational emissions.

Regarding Disclosure 2-23, these commitments focus on environmental sustainability and climate action. The source framework specifically tracks external pledges that carry mandatory reporting requirements, meaning pledges lacking formal reporting mechanisms are omitted from the record. Furthermore, these general sustainability pledges do not explicitly incorporate formal policy commitments to the UN Guiding Principles on Business and Human Rights or dedicated human rights due diligence frameworks.

Embedding Sustainability and Supplier Expectations

To embed sustainability practices across university operations, UC Berkeley provides annual sustainability training opportunities for non-academic staff. Ethical and environmental expectations are extended into the supply chain through a published supplier code of conduct, which specifies social and environmental standards for commercial partners.

In relation to Disclosure 2-24, the available disclosures document training offerings and supplier expectations as operational outputs. They do not detail the internal allocation of governance responsibility, procedural integration mechanisms, or specific monitoring processes used to enforce compliance across business relationships. Furthermore, staff training data is restricted to non-academic personnel and measures general sustainability instruction rather than specialized training on formal policy commitments.

Grievances and Advice Mechanisms

The university provides mechanisms for raising concerns and seeking guidance on workplace standards and ethical conduct. Human resources policies, grievance procedures, anti-discrimination guidelines, and whistleblower protections are published on the institution's HR portal and are accessible to employees. Personnel across UC campuses are also subject to the University of California Statement of Ethical Values and Standards of Ethical Conduct, alongside applicable union representation provisions.

In accordance with Disclosure 2-25 and Disclosure 2-26, the published disclosures confirm the availability of grievance procedures and whistleblower protection policies. However, the reported records do not outline the functional operational steps of these grievance processes, their handling capacity, or indicators of their effectiveness.

Reporting Limitations and Exclusions

Several limitations apply to the governance and strategy disclosures under the GRI framework. Under GRI 2-22, published strategic plans are recorded without attribution to a named senior executive or highest governance body signatory. Regarding Disclosure 2-23, collected commitments are limited to those with explicit reporting requirements, and broad sustainability goals do not explicitly incorporate formal human rights due diligence obligations. Under GRI 2-24, disclosures confirm the presence of supplier expectations and annual non-academic staff training, but do not detail internal responsibility allocation or mechanisms for embedding commitments across business relationships. Furthermore, under GRI 2-25 and GRI 2-26, grievance resolution and whistleblower protection information is maintained for employees, but operational details, user scope beyond employees, and effectiveness evaluations are omitted. Under GRI 2-28, reporting frameworks such as STARS and The Climate Registry are recorded as commitments rather than institutional association memberships. Finally, for GRI 2-27 (Compliance with laws and regulations), the institution does not report information on regulatory compliance, legal non-compliance instances, or associated fines, as STARS does not collect legal enforcement data.

Stakeholder engagement

Consultation Mechanisms

The University of California, Berkeley engages with students, academic staff, and the local community through established standing bodies and consultative mechanisms in accordance with GRI 2-29.

Student perspectives are represented within institutional governance through a Student Regent who holds voting rights on the Board of Regents of the University of California. Prior to assuming this voting role, a Student Regent-designate serves in a non-voting capacity to prepare for the position. The Student Regent attends meetings of the Board and its Committees, bringing student concerns directly into systemwide decision-making processes. The position is accessible to the student body through an application process.

Academic staff are consulted on institutional decisions, policies, and strategic plans through the Berkeley Academic Senate, which acts as the official body for faculty participation in governance.

Local community engagement is facilitated through collaboration between the Chancellor's Office Government and Community Relations unit and the Berkeley City Manager's Office. Together, these entities convene the Berkeley City Council's Special City/UC/Student Committee. This body meets regularly during each academic semester to address matters of shared concern, including university capital projects and local development. The committee comprises City Councilmembers representing neighborhoods adjacent to the campus, representatives from both undergraduate and graduate student governments, and university administrators. Additionally, the university

maintains ongoing bodies that enable non-affiliated local community-based organisations to participate democratically in institutional governance.

Reporting Limitations and Omissions

In relation to Disclosure 2-29, the available reporting outlines consultative mechanisms for designated internal and local constituencies, but does not detail how stakeholders are identified or how engagement is rendered meaningful for broader groups such as suppliers or vulnerable populations.

Regarding GRI 2-30, the institution does not report the percentage of total employees covered by collective bargaining agreements within the assessed framework.

Environmental performance

Energy Performance

The total annual energy consumption within the organisation is 78,414.00 Megawatt-hours . This total comprises electricity consumption of 47,744.70 Megawatt-hours and stationary fuel consumption of 30,414 Megawatt-hours . The university consumes 255.30 Megawatt-hours of heating and cooling from off-site sources, and exports 0 Megawatt-hours of on-site renewable electricity.

In terms of fuel composition, natural gas consumption is 30,014 Megawatt-hours . Heating oil consumption is 400 Megawatt-hours and coal or coke consumption is 0 Megawatt-hours . Propane and liquefied petroleum gas consumption is 0 Megawatt-hours . Annual renewable energy consumption stands at 18,173 Megawatt-hours . Renewable stationary fuels account for 0 Megawatt-hours .

Energy intensity metrics show an annual energy consumption per person of 1,346.02 Kilowatt-hours and an annual energy consumption per unit of floor area of 52.17 Kilowatt-hours per square meter .

Water Performance

The total water withdrawal is 2,092,006 Cubic meters . This is entirely drawn as potable water from off-site sources, which is 2,092,006 Cubic meters . Potable water from on-site sources is 0 Cubic meters .

The physical water quantity risk for the main campus is classified as high. To mitigate water impacts, the university harvests rainwater on-site for storage and use.

Emissions Performance

Direct Scope 1 greenhouse gas emissions from stationary combustion are 134,957 Metric tons of CO₂ equivalent . Scope 1 emissions from mobile combustion are 1,676 Metric tons

of CO₂ equivalent. Scope 1 fugitive emissions are 76 Metric tons of CO₂ equivalent. Greenhouse gas emissions from biogenic sources are 0 Metric tons of CO₂ equivalent.

Indirect Scope 2 greenhouse gas emissions from off-site sources of electricity, calculated using a market-based method, are 1,256 Metric tons of CO₂ equivalent. Scope 2 emissions from off-site sources of heating and cooling are 0 Metric tons of CO₂ equivalent.

Other indirect Scope 3 emissions include 19,913 Metric tons of CO₂ equivalent from business travel, 12,836 Metric tons of CO₂ equivalent from commuting, 728 Metric tons of CO₂ equivalent from waste generated in operations, and 22 Metric tons of CO₂ equivalent from fuel- and energy-related activities not included in Scope 1 or Scope 2.

The annual Scope 1 and Scope 2 emissions intensity is 2,368.25 Kilograms of CO₂ equivalent per person and 91.79 Kilograms per square meter per unit of floor area.

The baseline year for Scope 1 and Scope 2 emissions is 2019, with baseline emissions of 147,623 Metric tons of CO₂ equivalent. The percentage reduction in Scope 1 and Scope 2 emissions from this baseline is 9.83%. The adjusted net Scope 1 and Scope 2 emissions are 133,106.95 Metric tons of CO₂ equivalent. The university holds 4,858 Metric tons of CO₂ equivalent of external certified carbon offsets.

The baseline year was adopted because it represents the final period of business-as-usual emissions before the global pandemic. The emissions inventory includes major greenhouse gases and is reported to both The Climate Registry and the California Air Resources Board (CARB). Scope 1 and Scope 2 inventories adhere to The Climate Registry protocol.

Waste Performance

The annual non-hazardous waste generated is 7,732.13 Metric tons. The annual construction and demolition waste generated is 4,753.09 Metric tons.

Regarding waste diversion, the total non-hazardous waste diverted from disposal is 4,254.13 Metric tons. This includes 1,576 Metric tons recycled, 2,554 Metric tons composted, and 124.13 Metric tons prepared for reuse. The total construction and demolition waste diverted from disposal is 3,452.02 Metric tons. This consists of 2,858.23 Metric tons recycled and 593.79 Metric tons prepared for reuse.

Waste directed to disposal includes 3,478 Metric tons of non-hazardous waste disposed of to a landfill or incinerator, and 1,301.07 Metric tons of construction and demolition waste disposed of to a landfill or incinerator.

The university operates a surplus programme to store, sell, donate, or reuse institution-owned items. It also participates in a reuse programme for personal items. Composting is integrated into campus collection systems and processed at an industrial composting facility. The university has eliminated certain single-use disposable plastics and maintains a hazardous waste management programme to minimise hazardous material use.

Supplier Environmental Assessment

The percentage of bid solicitations that identify supplier sustainability considerations is 100%. The supplier code of conduct includes environmental expectations that exceed regulatory compliance.

Data Limitations and Gaps

Several reporting limitations exist when mapping the available data to GRI standards:

- **Energy (GRI 302):** GRI 302-1 requires energy values in joules, whereas the source data is reported in megawatt-hours. A conversion factor must be applied. The renewable energy consumption field includes renewable electricity, which is broader than the renewable fuel scope of Disclosure 302-1-b; the precise renewable fuel figure is represented by renewable stationary fuels. Heating oil and coal/coke are reported as nil, representing a complete absence of consumption rather than missing data. The denominators for energy intensity ratios are the combined full-time equivalent of students and employees, and the gross floor area. GRI 302-2, GRI 302-4, and GRI 302-5 are not reported.
- **Water (GRI 303):** GRI 303-3 requires water volumes in megalitres, whereas the source data is in cubic metres. On-site abstraction is reported as nil, meaning off-site potable water represents the entire withdrawal. The volume of harvested rainwater is not quantified. GRI 303-1 is limited to a risk grade for the main campus and does not describe wider stakeholder interactions or multi-campus impacts. GRI 303-2 is not reported.
- **Emissions (GRI 305):** The baseline year and baseline emissions are reported as a combined Scope 1 and Scope 2 total, which cannot be split to satisfy Disclosure 305-1 and Disclosure 305-2 separately. The source of emission factors, global warming potential rates, and the consolidation approach are not reported. The percentage reduction is net of purchased offsets; the gross reduction differs because the university holds offsets. GRI 305-5-b and Disclosure 305-5-d remain unallocated by scope or gas. Biogenic emissions are reported as CO₂-equivalent, which may differ from the biogenic CO₂ boundary. Specific Scope 1, Scope 2, and Scope 3 categories (such as capital goods and purchased goods) were left blank. GRI 305-6 and GRI 305-7 are not reported.
- **Waste (GRI 306):** Hazardous waste is not quantified by weight, meaning total waste generation under Disclosure 306-3 and diversion under Disclosure 306-4 cannot be fully reported. Disclosure 306-4-d requires a split of recovery operations into on-site and off-site, which is not collected. Disclosure 306-5 requires a split of disposal across multiple operations, but the source data merges landfill and incineration. GRI 306-1 is not reported.
- **Suppliers (GRI 308):** GRI 308-1 requires the percentage of new suppliers screened, whereas the source data reports the percentage of bid solicitations. GRI 308-2 is not reported.
- **Materials (GRI 301):** GRI 301-1, GRI 301-2, and GRI 301-3 are not reported as the university does not manufacture physical products.

Social and economic performance

Pay and Employment Conditions

The University of California, Berkeley, monitors employee compensation against local economic benchmarks. The percentage of employees receiving remuneration equivalent to at least a living wage is 96.20%. The designated living wage for the region is 39.62, while the wage floor for regular and permanent employees is 22.54. For student employees, the local hourly minimum wage is 16.99.

Regarding employee benefits and leave, 100% of employees are eligible for paid all-gender family or medical leave. The standard allowance for paid maternity leave is 12. Under the Family and Medical Leave Act (FMLA) and the California Family Rights Act (CFRA), eligible employees who meet the cumulative service and hours thresholds are entitled to a standard period of leave. Employees disabled by pregnancy are eligible for leave under the Pregnancy Disability Leave Laws (PDLL) from the start of their employment.

Occupational Health and Safety

The university operates an institutional health and safety management system overseen by dedicated workplace safety committees. These committees bring together workers and management to develop, review, and implement workplace health and safety policies.

Physical and behavioural health services are made available to all employees. The university also provides free or reduced-cost fitness activities, alongside contemplative and spiritual activities. To promote a healthy environment, smoking and tobacco use are prohibited across the entire campus.

Workforce Diversity

The university tracks diversity across different staff categories. The ethnic diversity index is 0.51 for executive staff, 0.50 for academic staff, and 0.69 for non-academic staff.

In terms of gender representation, the percentage of executive staff who identify as women or other marginalised gender identities is 50%. For regular, permanent academic staff, this figure is 36.70%, and for regular, permanent non-academic staff, it is 56.50%.

Data Limitations and Gaps

Several limitations exist within the reported data. For GRI 202-1, the local minimum wage figure is derived from student-employment records and represents the minimum for student workers rather than the general workforce. The ratio of standard entry-level wage by gender is unanswerable as gender-disaggregated wage data is not collected. The living wage is a separate benchmark and cannot be substituted for the minimum wage. Values are reported in US Dollars and are not directly comparable to other currencies without conversion.

For GRI 401-2, the university reports a single institution-wide eligibility rate, preventing a comparison between full-time and temporary or part-time employees. For GRI 401-3, the data is descriptive and lacks the required headcounts, return-to-work rates, and retention rates by gender, with maternity leave being narrower than parental leave.

Under GRI 403-1, GRI 403-3, GRI 403-4, and GRI 403-6, there is no information on whether the safety system is legally required, which standards it follows, or its specific worker coverage. Reported health services are general rather than specific occupational health services designed to identify and eliminate hazards. Committee responsibilities, meeting frequency, decision-making authority, and representation gaps are not fully detailed. Furthermore, the campus smoking prohibition is a control rather than a voluntary health promotion service, and the precise scope of access to health services is not quantified.

For GRI 405-1, gender data is combined into a single category for women and marginalised gender identities rather than a detailed split. Employee age-group breakdowns are unanswerable, and the percentage representation of constituencies on the highest decision-making body is not recorded. The ethnic diversity figures represent a concentration index rather than a percentage breakdown.

Not Reported

The following disclosures are not reported: GRI 202-2 (proportion of senior management hired from the local community); GRI 204-1 (proportion of spending on local suppliers, as procurement metrics focus on social impact suppliers rather than locality); GRI 401-1 (new employee hires and turnover); GRI 403-2 (hazard identification, risk assessment, and incident investigation); GRI 403-5 (occupational health and safety training); GRI 403-7 (prevention of impacts in business relationships); GRI 403-8 (workers covered by an occupational health and safety management system); GRI 403-9 (work-related injuries); GRI 403-10 (work-related ill health); and GRI 405-2 (ratio of basic salary and remuneration of women to men).

GRI content index

Reported	Partially reported	Not reported	Not assessed
26	14	38	0

“With reference to”, not “in accordance with.” GRI reserves in accordance for reports answering every Universal Disclosure (GRI 2) plus all disclosures for each material topic. This report does not, so it uses the weaker and correct claim.

GRI 2: General Disclosures 2021

Disclosure	Status	Value / reason	Notes
2-1 Organizational details	Reported	Institutional control: Public	GRI 2-1 also requires the legal name, the location of headquarters and the countries of operation. STARS carries none of these as fields — they are report metadata, not credit data.
2-2 Entities included in the organization's sustainability reporting	Reported	Narrative outlining the institutional boundary used to complete this report: The institutional boundary used in this report includes those for operational purposes ...	GRI 2-2-b/c additionally ask whether the reporting entities differ from those in the financial statements and how minority interests are consolidated. STARS asks neither.
2-3 Reporting period, frequency and contact point	Partially reported	Performance year for scope 1 and 2 GHG emissions: 2023 List of personnel who led the reporting process: Marina Zdobnova, Sustainability Data and Program Manager, Office of Sustainability Ashl...	STARS has no single reporting period, and the per-credit years diverge inside one submission: Cork's credits run from 2023 (construction waste) to 2025 (living wage, investment), Berkeley's from 2023 to 2024. Only TU Dublin is uniform, at 2023. Any single period stated for a GRI report built on this data would be wrong for some of its figures. GRI 2-3 also requires the reporting frequency, the publication date and a contact point; STARS collects none of these. Named preparers are not a designated contact point: STARS records names and roles without contact details, and does not say who should receive enquiries.
2-4 Restatements of information	Not reported	No STARS data exists for this disclosure.	STARS v2.2 and earlier scored Operations credits against the institution's own baseline and v3.0 scores against a peer group, so cross-version figures are not comparable in the first place — see CLAUDE.md 6.4.
2-5 External assurance	Reported	Were any independent audits or external assurance processes used in the preparation of this report?: No	GRI 2-5 additionally requires the assurance standard used, the level of assurance obtained, the limitations of the process and the relationship with the assurance provider. STARS captures none of these; the free-text field is optional and unstructured. Only populated where the institution answered yes to the assurance question, so it is absent for most submissions. Not populated by this institution: PRE-4 / Narrative outlining the independent audits or external assurance processes used in the preparation of this report.

Disclosure	Status	Value / reason	Notes
2-6 Activities, value chain and other business relationships	Partially reported	Which of the following features are included within the institutional boundary?: Museum	GRI 2-6 asks for the sectors the organization is active in, its value chain, its products and services and the markets served. A list of campus features covers only the activities, and only those with a physical footprint.
2-7 Employees	Partially reported	Full-time equivalent of employees: 13,678	FTE is not a headcount: two half-time staff count as one. GRI 2-7 further requires the breakdown by employment contract (permanent / temporary), by employment type (full- / part-time), by gender and by region. STARS collects a single undifferentiated figure.
2-8 Workers who are not employees	Not reported	No STARS data exists for this disclosure.	
2-9 Governance structure and composition	Reported	Are one or more academic staff representatives included as members of the institution's highest decision-making body?: Yes Are one or more staff members representing non-managerial workers included as members of the institution's highest decision-making body?: Yes Are one or more student representatives included as members of the institution's highest decision-making body?: Yes Narrative and/or website URL outlining academic staff representation on the institution's highest decision-making body: UC Berkeley has ongoing bodies through which academic staff can democratically particip...	GRI 2-9 also requires the number of executive and non-executive members, their independence, tenure, other significant positions held, and composition by gender and under-represented social group. STARS records only whether each constituency is represented. See the caveat on the academic-staff row: representation is recorded, composition is not. See the caveat on the academic-staff row. Free text of variable depth; it is not a substitute for the numeric composition GRI 2-9-c requires.
2-10 Nomination and selection of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-11 Chair of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-12 Role of the highest governance body in overseeing the management of impacts	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-13 Delegation of responsibility for managing impacts	Reported	Does the institution have one or more sustainability officers?: Yes Is at least one of the institution's sustainability committees, officers, or offices charged with coordinating various campus constituencies in the advancement of sustainability across the entire institution?: Yes Narrative and/or website URL providing an overview of the institution's sustainability officers: UC Berkeley's Office of Sustainability is led by a dedicated team committed to advancing...	GRI 2-13-b also requires whether and how often those executives report to the highest governance body. STARS does not ask. See the caveat on the sustainability-officer row. Free text; the reporting line to the highest governance body is not consistently stated.
2-14 Role of the highest governance body in sustainability reporting	Partially reported	Executive cover letter: STARS_3.0_Executive_letter.pdf	Endorsement by a senior executive is not review and approval by the highest governance body, and STARS records neither who approved the content nor whether material topics were reviewed. The field value is an attachment filename, so the letter's text is not in the dataset.
2-15 Conflicts of interest	Not reported	No STARS data exists for this disclosure.	
2-16 Communication of critical concerns	Not reported	No STARS data exists for this disclosure.	
2-17 Collective knowledge of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-18 Evaluation of the performance of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-19 Remuneration policies	Not reported	No STARS data exists for this disclosure.	
2-20 Process to determine remuneration	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-21 Annual total compensation ratio	Not reported	Mapped to STARS, but this institution left every mapped field blank.	The denominator differs and the difference is large. GRI 2-21 divides the highest-paid individual by the MEDIAN of all other employees; STARS divides the highest-paid senior administrator by the LOWEST-paid full-time employee. The STARS figure is therefore a top-to-bottom spread, not a top-to-typical ratio, and is not comparable with any GRI 2-21 figure published elsewhere. IL-62 is also an Innovation & Leadership bonus credit, so it is optional: only TU Dublin reports it (8.08); Berkeley and Cork leave it blank.
2-22 Statement on sustainable development strategy	Partially reported	Narrative detailing the institution's guiding vision or goals for sustainability and the plan(s) in which they are published: UC Berkeley Climate Action Plan: UC Berkeley has a published Climate Action Plan that d...	GRI 2-22 requires the statement to come from the highest governance body or the most senior executive. STARS records the institution's published vision without attributing it to a named signatory, so the authorship the disclosure turns on is absent.
2-23 Policy commitments	Reported	Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: STARS Reporting through AASHE: UC Berkeley is a participant in the Sustainability Track...	GRI 2-23 specifically requires commitments to respect human rights, to the UN Guiding Principles and to due diligence. A sustainability commitment is broader and does not imply any of these. STARS asks only for commitments carrying a reporting requirement, so commitments without one are out of scope of the field.
2-24 Embedding policy commitments	Reported	Does the institution have a published code of conduct to guide suppliers on the institution's social and environmental expectations for them?: Yes Does the institution make available sustainability-focused training opportunities to non-academic staff on at least an annual basis?: Yes Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: The UC Berkeley Office of Sustainability provides campus leadership by setting ambitiou...	GRI 2-24 also requires how responsibility is allocated internally and how the commitments are embedded in strategies and procedures. STARS asks about non-academic staff only, and about sustainability training generally rather than training on the specific commitments. It describes outcomes, not the allocation of responsibility, the integration into procedures, or the handling of commitments through business relationships that GRI 2-24-a enumerates.
2-25 Processes to remediate negative impacts	Partially reported	Does the institution publish information on grievance resolution in a format that is accessible to all employees?: Yes	STARS records only that the information is published — not how the mechanism operates, who may use it, or its effectiveness — and covers employees only, where GRI 2-25 covers all affected stakeholders.

Disclosure	Status	Value / reason	Notes
2-26 Mechanisms for seeking advice and raising concerns	Reported	Does the institution publish information on whistleblower protections in a format that is accessible to all employees?: Yes Narrative and/or website URL providing an overview of the institution's published measures to protect employee rights: UC Berkeley Human Resources Policies: UC Berkeley has a dedicated section on its Human ...	STARS records publication, not a description of how the mechanism operates, and covers employees only. GRI 2-26 extends to all individuals, including those in business relationships. Employees only; see the caveat on the whistleblower row.
2-27 Compliance with laws and regulations	Not reported	No STARS data exists for this disclosure.	
2-28 Membership associations	Partially reported	Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: STARS Reporting through AASHE: UC Berkeley is a participant in the Sustainability Track...	Signing a charter is not membership of an association, and STARS restricts the field to commitments carrying a reporting requirement. The institution's association memberships are not collected as such.
2-29 Approach to stakeholder engagement	Reported	Description of other mechanisms used to consult students on institutional decisions, plans, or policies: Each year, one UC student is appointed as a Student Regent with voting rights, represen... Description of other mechanisms used to consult academic staff on institutional decisions, plans, or policies: Berkeley Academic Senate: https://academic-senate.berkeley.edu/ Narrative and/or website URL outlining the ad hoc mechanisms used during the previous three years to consult local community members on institutional decisions, plans, or policies: The Government and Community Relations unit of the Chancellor's Office partners with th... Does the institution have one or more ongoing bodies through which local community-based organizations not affiliated with the institution can democratically participate in its governance?: Yes	GRI 2-29 also asks how stakeholders are identified and how the organization ensures the engagement is meaningful. STARS asks about four fixed constituencies and does not cover suppliers, customers or vulnerable groups. See the caveat on the student-consultation row.
2-30 Collective bargaining agreements	Not reported	No STARS data exists for this disclosure.	

GRI 3: Material Topics 2021

Disclosure	Status	Value / reason	Notes
3-1 Process to determine material topics	Not reported	No STARS data exists for this disclosure.	This is a structural difference, not missing data. AASHE determined materiality for the whole higher-education sector when it designed the STARS credit set; the institution answers that fixed set rather than identifying its own impacts. PA-2 records a climate-vulnerability assessment and PA-3 records stakeholder consultation, but neither is a materiality process and neither should be presented as one.
3-2 List of material topics	Partially reported	Has the institution adopted one or more measurable sustainability objectives that address campus operations?: Yes Has the institution adopted one or more measurable sustainability objectives that address teaching, learning, and/or research?: Yes Has the institution adopted one or more measurable sustainability objectives that address racial equity and/or social justice?: Yes Has the institution adopted one or more measurable sustainability objectives that address administration and/or finance?: Yes Has the institution adopted one or more measurable sustainability objectives that address campus and/or community engagement?: Yes	NOT A MATERIALITY DETERMINATION. These five areas are fixed by STARS and identical for every institution, so they say where an institution has set objectives, not which impacts it judged significant and why. GRI 3-2-b also requires changes against the previous reporting period, which a single STARS submission cannot show. Presenting these as material topics would overstate what the institution actually did. See the campus-operations row: fixed areas, not a materiality determination.

Disclosure	Status	Value / reason	Notes
3-3 Management of material topics	Partially reported	Narrative listing the institution's measurable sustainability objectives that address campus operations: UC Berkeley follows the UC systemwide Sustainable Practices Policy . Section III. C. ou... Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: The UC Berkeley Office of Sustainability provides campus leadership by setting ambitiou... Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes	Asked per material topic, and no material-topics list exists (see GRI 3-2) — so these are institution-wide answers to a question GRI asks topic by topic. GRI 3-3 also requires the impacts themselves (3-3-a), whether the organisation is involved through its own activities or its business relationships (3-3-b), and lessons learned (3-3-e-iv). STARS collects none of those. It reports outcomes rather than distinguishing actions that prevent potential harm from actions that remediate actual harm, which is the split GRI 3-3-d asks for.

GRI 202: Market Presence 2016

Disclosure	Status	Value / reason	Notes
202-1 Ratios of standard entry level wage by gender compared to local minimum wage	Reported	Percentage of employees that receive remuneration equivalent to at least a living wage: 96.20 Living wage: 39.62 Wage floor for regular/permanent employees: 22.54 Local hourly minimum wage for students: 16.99	PARTIALLY SATISFIES GRI 202-1, AND THE RATIO IS DERIVABLE. Both terms are in STARS: PA-13's Wage floor for regular/permanent employees is the standard entry-level wage, and PA-9's Local hourly minimum wage for students is the local statutory minimum. Berkeley $22.54/16.99 = 1.33$, Cork $16.40/14.25 = 1.15$, TU Dublin $16.53/12.70 = 1.30$. Δ TWO LIMITS REMAIN. The minimum-wage field sits in a student-employment credit, so it is the minimum applying to student workers rather than one stated for the workforce generally — in all three cases it matches the statutory local minimum, but say which figure is being used. And GRI requires the ratio BY GENDER, which STARS does not collect at any credit; that half is unanswerable, not merely unsupplied. STARS separately benchmarks pay against a LIVING wage, which is a different and higher threshold than the minimum wage and must not be substituted for it. Values are bare numbers with no currency - EUR for the Irish universities, USD for Berkeley - and are not comparable across them without saying so. It lives in PA-9, a student-employment credit, so it is the minimum applying to student workers. In all three cases it matches the local statutory minimum (Berkeley 16.99, the City of Berkeley rate; Cork 14.25; TU Dublin 12.70, Ireland's national minimum), but the scoping should be stated rather than glossed.

Disclosure	Status	Value / reason	Notes
202-2 Proportion of senior management hired from the local community	Not reported	No STARS data exists for this disclosure.	No STARS credit collects this.

GRI 204: Procurement Practices 2016

Disclosure	Status	Value / reason	Notes
204-1 Proportion of spending on local suppliers	Not reported	No STARS data exists for this disclosure.	

GRI 301: Materials 2016

Disclosure	Status	Value / reason	Notes
301-1 Materials used by weight or volume	Not reported	No STARS data exists for this disclosure.	This is a sector-fit finding of the same kind as AC-1 and EN-1 on the STARS side: the framework and the institution type do not line up.
301-2 Recycled input materials used	Not reported	No STARS data exists for this disclosure.	
301-3 Reclaimed products and their packaging materials	Not reported	No STARS data exists for this disclosure.	

GRI 302: Energy 2016

Disclosure	Status	Value / reason	Notes
302-1 Energy consumption within the organization	Reported	Total annual energy consumption: 78,414.00 Megawatt-hours Total electricity consumption: 47,744.70 Megawatt-hours Total stationary fuel consumption: 30,414 Megawatt-hours Annual renewable energy consumption: 18,173 Megawatt-hours Renewable stationary fuels: 0 Megawatt-hours Total heating and cooling from off-site sources: 255.30 Megawatt-hours On-site renewable electricity exported: 0 Megawatt-hours Natural gas: 30,014 Megawatt-hours Heating oil: 400 Megawatt-hours Coal/coke: 0 Megawatt-hours Propane/LPG: 0 Megawatt-hours	GRI 302-1 expects joules or multiples and requires fuel consumption split into renewable and non-renewable. STARS reports megawatt-hours - convertible, but state the conversion. SCOPE MISMATCH. GRI 302-1-b is 'Total fuel consumption from renewable sources'. This STARS field also includes renewable ELECTRICITY (Berkeley 18,173 MWh), so it is broader than GRI's line and would overstate renewable fuel. The precise match is 'Renewable stationary fuels' - see the row below, which is ~0 for all three. Use this field only for a general renewables statement, never for GRI 302-1-b. Correct but near-empty: 0.21 MWh for TU Dublin, 0 for Cork and Berkeley. A finding in itself - these universities' renewable energy is almost entirely purchased electricity, not renewable fuel. GRI 302-1-b is therefore honestly reportable as ~zero. GRI 302-1 requires joules; STARS reports MMBtu or MWh, so the value must be converted before it is cited as a GRI figure. Zero for all three institutions in the current reporting year, so the mapping is correct but currently carries no signal. GRI 302-1 expects joules; STARS reports MWh — convertible, but state the conversion. Zero at Cork; a small residual at TU Dublin and Berkeley. Units are MWh, not joules. A reported zero, not missing data. STARS also carries an Other stationary fuels catch-all, also zero everywhere, which is what makes this list of fuel types complete rather than merely partial.
302-2 Energy consumption outside of the organization	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
302-3 Energy intensity	Reported	Annual energy consumption per person: 1,346.02 Kilowatt-hours Annual energy consumption per unit of floor area: 52.17 Kilowatt-hours per square meter	Denominator (FTE students + employees) must be disclosed with the ratio. Denominator is gross floor area; must be disclosed with the ratio.
302-4 Reduction of energy consumption	Not reported	No STARS data exists for this disclosure.	
302-5 Reductions in energy requirements of products and services	Not reported	No STARS data exists for this disclosure.	

GRI 303: Water and Effluents 2018

Disclosure	Status	Value / reason	Notes
303-1 Interactions with water as a shared resource	Reported	Level of physical water quantity risk for the institution's main campus: High Does the institution harvest rainwater on-site for storage and use?: Yes	A risk grade is not the description GRI 303-1 asks for: it says nothing about how water is withdrawn, consumed or discharged, how the impacts were identified, or how the institution works with stakeholders on shared water resources. It also covers the main campus only, where a multi-campus institution has several. Only one of the three institutions quantifies the volume harvested; the other two answer the yes/no only.
303-2 Management of water discharge-related impacts	Not reported	No STARS data exists for this disclosure.	
303-3 Water withdrawal	Reported	Total water withdrawal: 2,092,006 Cubic meters Potable water from off-site sources: 2,092,006 Cubic meters Potable water from on-site sources: 0 Cubic meters	GRI 303-3 requires a breakdown by source AND a separate figure for areas with water stress. STARS collects neither, so 303-3 cannot be fully satisfied from STARS alone. UNITS: GRI 303-3 requires megaliters and STARS reports cubic meters. Divide by 1,000 before citing the figure as a GRI 303-3 value, and state the conversion — the same treatment GRI 302-1 gets for megawatt-hours against joules. Maps to the specific GRI 303-3-a-v category 'Third-party water'. It is the ONLY withdrawal source these universities have — on-site abstraction is zero for all three — so this equals the total. Zero for all three institutions, which is itself the finding: none of them abstracts its own water. Retained so the GRI 303-3 source breakdown is complete rather than silent.

Disclosure	Status	Value / reason	Notes
303-4 Water discharge	Not reported	Assessed: the nearest STARS field (OP-3 / Annual volume of water recovered and/or returned) was reviewed and rejected as an answer to this disclosure.	GRI 303-4 requires discharge by destination, freshwater/other water split, and treatment level. STARS captures none of that. Weak mapping - verify before use.
303-5 Water consumption	Not reported	Assessed: the nearest STARS field (OP-3 / Annual potable water use) was reviewed and rejected as an answer to this disclosure.	DEFINITIONS DIFFER. GRI 303-5 water consumption = withdrawal minus discharge. STARS 'annual potable water use' is potable supply only and is not computed that way. Do not present this as GRI 303-5 without recomputing.

GRI 305: Emissions 2016

Disclosure	Status	Value / reason	Notes
305-1 Direct (Scope 1) GHG emissions	Reported	Scope 1 GHG emissions from stationary combustion: 134,957 Metric tons of CO2 equivalent Scope 1 GHG emissions from mobile combustion: 1,676 Metric tons of CO2 equivalent Scope 1 GHG fugitive emissions: 76 Metric tons of CO2 equivalent GHG emissions from biogenic sources: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2019 Baseline scope 1 and 2 GHG emissions: 147,623 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: https://sustainability.berkeley.edu/carbon-solutions/greenhouse-gas-inventory 2019 was ... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: UC Berkeley reports on ten emissions sources and analyzes emissions in three different ...	GRI 305-1 additionally requires biogenic CO2 to be reported separately from the gross figure. GRI asks for biogenic CO2 specifically; the STARS field is CO2-equivalent and may not be the same boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-1-e) and the consolidation approach (305-1-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 1 GHG emissions; OP-6 / Scope 1 GHG process emissions.

Disclosure	Status	Value / reason	Notes
305-2 Energy indirect (Scope 2) GHG emissions	Reported	Scope 2 GHG emissions from off-site sources of electricity (market-based): 1,256 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of heating and cooling: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2019 Baseline scope 1 and 2 GHG emissions: 147,623 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: https://sustainability.berkeley.edu/carbon-solutions/greenhouse-gas-inventory 2019 was ... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: UC Berkeley reports on ten emissions sources and analyzes emissions in three different ...	GRI 305-2 requires location-based and, where available, market-based figures reported separately. Do not present a single scope 2 number without saying which method. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-2-e) and the consolidation approach (305-2-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 2 GHG emissions; OP-6 / Scope 2 GHG emissions from off-site sources of electricity (location-based).
305-3 Other indirect (Scope 3) GHG emissions	Reported	Scope 3 GHG emissions from business travel: 19,913 Metric tons of CO2 equivalent Scope 3 GHG emissions from commuting: 12,836 Metric tons of CO2 equivalent Scope 3 GHG emissions from waste generated in operations: 728 Metric tons of CO2 equivalent Scope 3 GHG emissions from fuel- and energy-related activities not included in scope 1 or scope 2: 22 Metric tons of CO2 equivalent	Not populated by this institution: OP-6 / Scope 3 GHG emissions from purchased goods and services; OP-6 / Scope 3 GHG emissions from capital goods.
305-4 GHG emissions intensity	Reported	Annual scope 1 and 2 GHG emissions per person: 2,368.25 Kilograms of CO2 equivalent Annual scope 1 and 2 GHG emissions per unit of floor area: 91.79 Kilograms per square meter	GRI 305-4 requires the denominator to be stated. Here it is FTE students + employees, not a corporate revenue or output metric. Denominator is gross floor area in square meters; must be disclosed alongside the ratio.

Disclosure	Status	Value / reason	Notes
305-5 Reduction of GHG emissions	Reported	Percentage reduction in scope 1 and 2 GHG emissions from baseline: 9.83 Baseline scope 1 and 2 GHG emissions: 147,623 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2019 Narrative outlining when and why the GHG emissions baseline was adopted: https://sustainability.berkeley.edu/carbon-solutions/greenhouse-gas-inventory-2019 was ... Adjusted net scope 1 and 2 GHG emissions: 133,106.95 Metric tons of CO2 equivalent Third party certified carbon offsets: 4,858 Metric tons of CO2 equivalent	GRI 305-5 asks for reductions as an ABSOLUTE quantity in metric tons CO2e; STARS gives a percentage. △ THAT PERCENTAGE IS NET OF PURCHASED OFFSETS. STARS computes it from Adjusted net scope 1 and 2 GHG emissions, not from the gross total printed alongside it, so the two do not reconcile wherever an institution holds offsets: Berkeley's reduction is 6.54% gross and 9.83% net, a third of the headline figure being bought rather than achieved. Cork and TU Dublin agree on both bases only because their offsets are zero. Deriving the absolute reduction as baseline minus current gives the GROSS figure — correct, but not the number STARS prints. Say which basis is being quoted, and report the offsets separately as GRI 305-5's compilation requirement 2.9.5 demands. Derive it; do not present the baseline itself as a reduction. The subtraction is only valid because both figures cover the same combined scope 1 + 2 boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. GRI 305-5-b (gases included) and 305-5-d (which scopes the reductions occurred in) remain unanswered — STARS reports the reduction against the combined scope 1 + 2 total without attributing it to either. GROSS AND NET DIVERGE WHERE OFFSETS EXIST. Berkeley's reduction is 6.54% gross and 9.83% net; Cork's and TU Dublin's are identical either way because they hold no offsets. State which basis is being quoted. Berkeley holds 4,858 tCO2e of third-party certified offsets, which is the entire difference between its gross and adjusted-net reduction — about a third of the headline figure. STARS also reports a Net carbon sinks field which is CAPPED and does NOT equal the deduction actually applied, so do not use it to reconcile the two percentages.
305-6 Emissions of ozone-depleting substances (ODS)	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no ODS data at any credit. Cannot be reported from this dataset.
305-7 Nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no criteria-air-pollutant data. Cannot be reported from this dataset.

GRI 306: Waste 2020

Disclosure	Status	Value / reason	Notes
306-1 Waste generation and significant waste-related impacts	Not reported	No STARS data exists for this disclosure.	
306-2 Management of significant waste-related impacts	Reported	Does the institution have a surplus program through which institution-owned items that are no longer needed are stored for eventual sale, donation, or reuse?: Yes Does the institution have or participate in a reuse program through which employees and/or students can donate personal items for redistribution?: Yes Has the institution eliminated the on-site use of at least one form of single-use disposable plastic?: Yes Does the institution have a hazardous waste management program or protocol that includes measures to minimize or reduce the use of hazardous materials?: Yes Narrative and/or website URL providing an overview of the institution's composting program: UC Berkeley campus has integrated composting into all of our collection systems and its... Does the institution have sufficient data on construction and demolition waste to pursue this indicator?: Yes	GRI 306-3 additionally requires hazardous waste to be quantified separately from non-hazardous. STARS quantifies only non-hazardous and construction-and-demolition waste, so the tonnage is unavailable. It states data sufficiency as a yes/no rather than describing the collection process, and covers construction and demolition waste only.

Disclosure	Status	Value / reason	Notes
306-3 Waste generated	Reported	Annual non-hazardous waste generated: 7,732.13 Metric tons Annual construction and demolition waste generated: 4,753.09 Metric tons	NOT EQUIVALENT - a subset. GRI 306-3-a is TOTAL waste generated including hazardous, broken down by composition. STARS reports non-hazardous only and collects no hazardous tonnage at any credit, so 306-3 cannot be fully satisfied. Do not present non-hazardous waste as the organisation's total waste. (Contrast the 306-4 and 306-5 rows, which are component : GRI has explicit non-hazardous lines at 306-4-c and 306-5-c for the STARS figures to answer, whereas 306-3 has no non-hazardous sub-requirement at all — which is why this row is weaker than those two, not equal to them.)
306-4 Waste diverted from disposal	Reported	Total non-hazardous waste diverted from disposal: 4,254.13 Metric tons Non-hazardous waste recycled: 1,576 Metric tons Non-hazardous waste composted: 2,554 Metric tons Non-hazardous waste prepared for reuse: 124.13 Metric tons Total construction and demolition waste diverted from disposal: 3,452.02 Metric tons Construction and demolition waste recycled: 2,858.23 Metric tons Construction and demolition waste prepared for reuse: 593.79 Metric tons	Exact scope match on GRI 306-4-c, including its split by recovery operation (reuse / recycling / other) from the rows below. GRI 306-4-d additionally wants each operation split on-site vs off-site, which STARS does not collect. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions. Reuse is a higher-value recovery route than recycling under the waste hierarchy, so omitting it understates the quality of diversion as well as the arithmetic. Cork recovers 1,162.73 of 6,837.95 tonnes this way.
306-5 Waste directed to disposal	Reported	Non-hazardous waste disposed of to a landfill or incinerator: 3,478 Metric tons Construction and demolition waste disposed of to a landfill or incinerator: 1,301.07 Metric tons	WEAKER THAN THE 306-4 EQUIVALENT: GRI 306-5-c also requires the total split across four disposal operations — incineration with energy recovery, incineration without, landfilling, other — and STARS merges landfill and incineration into a single figure. The waste-to-energy percentage field would separate incineration with recovery, but only two of the three institutions report it, so the split cannot be derived consistently. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.

GRI 308: Supplier Environmental Assessment 2016

Disclosure	Status	Value / reason	Notes
308-1 New suppliers that were screened using environmental criteria	Partially reported	Does the institution's supplier code of conduct include one or more expectations in regard to environmental impact that exceed or are additional to regulatory compliance?: Yes Percentage of bid solicitations that identify supplier sustainability considerations: 100	GRI 308-1 requires a percentage of new suppliers actually screened. STARS reports the existence of the criteria, not their application to any supplier, so no percentage can be derived. The denominator is bid solicitations, not new suppliers, and one solicitation may attract many suppliers or none. 'Sustainability considerations' is also broader than the environmental criteria GRI 308-1 specifies. The figure is 0 percent at TU Dublin, so a low value here should not be read as a screening failure without checking the product-specification field alongside it.
308-2 Negative environmental impacts in the supply chain and actions taken	Not reported	No STARS data exists for this disclosure.	

GRI 401: Employment 2016

Disclosure	Status	Value / reason	Notes
401-1 New employee hires and employee turnover	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no hiring or turnover figures.
401-2 Benefits provided to full-time employees that are not provided to temporary or part-time employees	Partially reported	Percentage of employees eligible for paid all-gender family/medical leave: 100	GRI 401-2 turns on the contrast between full-time employees and temporary or part-time employees, and asks for the benefits by significant location of operation. STARS gives a single institution-wide eligibility rate with no employment-type split, so the comparison the disclosure exists to make cannot be drawn.
401-3 Parental leave	Partially reported	Number of weeks of paid maternity leave: 12 Narrative and/or website URL providing an overview of the maternity leave options available to employees: https://ucnet.universityofcalifornia.edu/wp-content/uploads/forms/pdf/pregnancy-newborn...	GRI 401-3 requires headcounts by gender: employees entitled to parental leave, those who took it, those who returned, those still employed twelve months later, and the resulting return-to-work and retention rates. STARS reports none of these — it reports the policy, not its uptake. 'Maternity' is also narrower than GRI's 'parental'. Descriptive only; supplies none of the headcounts or rates GRI 401-3 requires.

GRI 403: Occupational Health and Safety 2018

Disclosure	Status	Value / reason	Notes
403-1 Occupational health and safety management system	Partially reported	Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: https://ehs.berkeley.edu/workplace-safety	STARS never asks the 403-1 question, so an answer only appears where the institution volunteered it. Nothing records whether the system exists because of a legal requirement, which standard it follows, or which workers, activities and workplaces it covers — that is 403-1-b, and it is absent.
403-2 Hazard identification, risk assessment, and incident investigation	Not reported	No STARS data exists for this disclosure.	
403-3 Occupational health services	Partially reported	Does the institution make physical health services available to employees?: Yes	General employee health services are not occupational health services: GRI 403-3 is about the function that identifies and eliminates workplace hazards, and about how worker health data is kept confidential. STARS asks about neither.
403-4 Worker participation, consultation, and communication on occupational health and safety	Reported	Does the institution have an institution-wide health and safety committee or network of committees that brings together workers and management in the development and review of workplace health and safety policies and procedures?: Yes Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: https://ehs.berkeley.edu/workplace-safety	GRI 403-4-b further requires the committee's responsibilities, meeting frequency, decision-making authority, and whether any workers are unrepresented. STARS records existence only. Depth varies by institution; meeting frequency and decision-making authority are not consistently stated.
403-5 Worker training on occupational health and safety	Not reported	No STARS data exists for this disclosure.	
403-6 Promotion of worker health	Reported	Does the institution make physical health services available to employees?: Yes Does the institution make behavioral health services available to employees?: Yes Does the institution make free or reduced cost fitness activities available to employees?: Yes Does the institution prohibit smoking and tobacco use across the entire campus?: Yes Does the institution make contemplative and/or spiritual activities available to employees?: Yes	GRI 403-6-a also requires the scope of access provided; STARS records availability as a yes/no, with the scope left to the narrative. A prohibition is a control rather than a voluntary promotion service; STARS also records the weaker variants (indoor-only, restricted outdoor smoking) in separate fields.

Disclosure	Status	Value / reason	Notes
403-7 Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Not reported	No STARS data exists for this disclosure.	
403-8 Workers covered by an occupational health and safety management system	Not reported	No STARS data exists for this disclosure.	
403-9 Work-related injuries	Not reported	No STARS data exists for this disclosure.	PA-11 (Health, Safety and Wellbeing) contains no injury figures - its only numeric fields are STARS scoring artefacts. Cannot be reported.
403-10 Work-related ill health	Not reported	No STARS data exists for this disclosure.	PA-11 contains no ill-health figures. Cannot be reported.

GRI 405: Diversity and Equal Opportunity 2016

Disclosure	Status	Value / reason	Notes
405-1 Diversity of governance bodies and employees	Reported	Ethnic diversity index for executive staff: 0.51 Percentage of executive staff that identify as women or other marginalized gender identities: 50 Percentage of regular/permanent academic staff that identify as women or other marginalized gender identities: 36.70 Percentage of regular/permanent non-academic staff that identify as women or other marginalized gender identities: 56.50 Ethnic diversity index for academic staff: 0.50 Ethnic diversity index for non-academic staff: 0.69	This is a diversity INDEX (a single 0-1 concentration score), not the percentage breakdown GRI 405-1-b asks for. It shows how mixed the group is, not what share each group holds. No STARS credit collects employee age at all, so GRI 405-1's age-group split (under 30 / 30-50 / over 50) is unanswerable for every employee category. 405-1-a is still not answered: STARS PA-3 records which constituencies are represented on the highest decision-making body, never what percentage of that body they make up. DATA QUALITY: TU Dublin's value is the string '0 Revised on Nov. 24, 2025' — annotation text concatenated onto the figure — so the field is typed <code>text</code>, not <code>number</code>, and will not parse. Cork and Berkeley are clean. STARS reports one combined figure for 'women or other marginalized gender identities' rather than a percentage per gender, so the split GRI asks for is two buckets, not three.
405-2 Ratio of basic salary and remuneration of women to men	Not reported	No STARS data exists for this disclosure.	STARS FIELDS: nothing. PA-13 covers living-wage coverage and wage floors, not a gender pay ratio — despite the credit being named 'Pay Equity'. BUT the evidence documents linked from STARS answers partially close this: UCC publishes V3EDIGenderPayGapReport2025.pdf and TU Dublin Gender-Pay-Gap-Report-2023-FINALv1.pdf, both stating a mean gender pay gap. Berkeley links no equivalent. NOT a substitute for 405-2: GRI wants the ratio of basic salary and remuneration of women to men PER EMPLOYEE CATEGORY and per significant location; these reports give one organisation-wide percentage. Reportable as context with the source named, for 2 of 3 institutions, and it must be read out of the PDF by a human — it is not in any structured field, so it cannot go through the Jinja2 number path.

Verifying this report

Every figure above is recorded in `report/output/index_provenance.csv` with the exact STARS credit and field it came from, so any number can be traced to a row of the source dataset without trusting the generator. `tests/test_content_index.py` re-derives them independently of the code that produced them.
