

Sustainability Report — Technological University Dublin

Prepared **with reference to** the GRI Standards · compiled 2026-08-30

About this report. It is generated from Technological University Dublin's public AASHE STARS 3.0 submission, mapped onto the GRI Standards. It covers 78 GRI disclosures across 13 standards. Where a disclosure cannot be answered from STARS data, the report says so and why, rather than omitting the question. **How the figures got here — and why they can be trusted.** Every number in this document was copied by code from the extracted STARS dataset. The language model that wrote the prose was never shown a figure: it wrote named placeholders and the values were substituted afterwards, so it could not alter, round or invent one. After substitution the finished text is scanned, and the build fails if any number in it cannot be traced back to the source data. The model chose the sentences; it did not choose the numbers. **What that guarantee does not cover.** It applies to figures. Qualitative statements are drawn from the institution's own STARS narrative answers, but no mechanical check confirms that a sentence describing them is faithful. **"With reference to", not "in accordance with".** GRI reserves *in accordance* for reports answering every Universal Disclosure plus all disclosures for each material topic. This report does not, so it makes the weaker and correct claim. **Source and attribution.** [Technological University Dublin STARS Report](<https://reports.aashe.org/institutions/technological-university-dublin-dublin/report/2024-12-02/>), AASHE. STARS data is publicly accessible and used here with attribution to AASHE; it is not openly licensed.

The organisation and its reporting

Technological University Dublin (TU Dublin) is a public higher education institution. Its activities within the reporting boundary include academic and research functions, as well as campus operations such as an agricultural school.

Entities Included in Reporting

The reporting boundary encompasses the university's campuses at City, Tallaght, and Blanchardstown. The City campus comprises several locations in Dublin city centre, including Grangegorman, Bolton Street, and Aungier Street, alongside smaller facilities. This report covers all estates, buildings, university functions, academic and non-academic staff, students, and research hubs. Research outputs are captured from Scopus and the university's repository, Arrow. Multiple staff members across the institution contributed to the data collection and validation process. A known limitation within this boundary is the availability of data from third-party food service providers.

Reporting Period and Management

The performance year for Scope 1 and Scope 2 greenhouse gas emissions is defined as 2023. The preparation of this report was led by the Head of Sustainability Intelligence, Dr. Philippe Lemarchand, and the Data Analyst in Sustainability Intelligence, Dr. Zeyan Zhao.

External Assurance

The data and disclosures presented in this report have not been subjected to independent audits or external assurance processes.

Reporting Limitations and Omissions

Several disclosures required by the GRI Standards cannot be fully addressed due to the structural limitations of the STARS reporting framework from which this data is derived:

- Under GRI 2-1, the legal name, headquarters location, and countries of operation are omitted as they are not captured within the standard data fields.
- Under GRI 2-2, the report does not clarify whether the reporting boundary differs from the university's financial statements, nor does it address the consolidation of minority interests.
- Under GRI 2-3, the named preparers do not constitute a formal contact point for enquiries, and contact details are not recorded. Furthermore, while TU Dublin's data is uniform for the period 2023, the underlying framework lacks a single standardised reporting period across all institutions, and does not collect reporting frequency or publication dates.
- Under GRI 2-4, restatements of information from previous periods are not reported because STARS submissions function as independent snapshots without comparative historical tracking.
- Under GRI 2-5, because no external assurance was conducted, details regarding assurance standards, levels of assurance, process limitations, and relationships with assurance providers are absent. The narrative field for independent audits was left blank.
- Under GRI 2-6, the description of activities is limited to physical campus features, such as the agricultural school, and does not fully detail the wider value chain, services, or markets served.

Activities and workers

Employee Workforce

Technological University Dublin tracks its workforce size to understand its operational scale and human resource requirements. Under Disclosure 2-7, the total workforce is measured using full-time equivalent metrics. The total full-time equivalent of employees at the institution is 2,404.

There are specific limitations inherent in this dataset. The reported figure represents full-time equivalents rather than an absolute headcount, meaning that multiple part-time staff members are aggregated into single full-time units. Furthermore, the primary reporting framework utilized by the university collects only this single, undifferentiated figure. As a result, the university is currently unable to provide the detailed breakdowns required by GRI 2-7, such as divisions by gender, region, employment contract (permanent versus temporary), or employment type (full-time versus part-time).

Workers Who Are Not Employees

For Disclosure 2-8, which concerns workers who are not employees but whose work is controlled by the organisation, the university does not currently report comprehensive data. The reporting framework focuses primarily on registered employees and students. While the institution maintains records of significant contracting firms, these figures represent the contracting entities themselves rather than the individual workers employed by them. Consequently, the specific number of external contractors, their roles, and their contractual relationships with the university remain unreported.

Material topics

Topic Identification and Framework

Technological University Dublin aligns its sustainability reporting with the Sustainability Tracking, Assessment & Rating System (STARS), a sector-specific framework developed by the Association for the Advancement of Sustainability in Higher Education (AASHE). The university has established measurable sustainability objectives across the core operational and academic areas defined within the STARS credit set: campus operations; teaching, learning, and research; racial equity and social justice; administration and finance; and campus and community engagement.

Because these areas are derived directly from the standardised STARS credit set designed for higher education, the university did not perform its own materiality assessment and cannot describe one. The selected topics reflect the structured criteria of the external framework rather than an internal determination of material impacts.

Management of Sustainability Topics

Management of these sustainability areas is delivered through university-wide strategic planning and dedicated administrative structures, fulfilling Disclosure 3-3 through an institution-wide approach.

Operational sustainability targets are embedded within the university's strategic plan. These operational objectives focus on lowering greenhouse gas emissions and improving energy efficiency to support national climate action targets set for public sector bodies. Executive responsibility for campus operations rests with the Vice-President of Sustainability, supported by dedicated project leadership.

In education and research, management is led by the Sustainability Education team, which oversees curriculum transformation and staff development. AASHE recognises the institution as a Centre for Sustainability Across the Curriculum in Europe. Specific initiatives driving these objectives include a dedicated sustainability education framework, the University Education Model, participation in Sulitest, the creation of a Sustainability Toolkit, collaboration with UNITAR, and SATLE project funding. Institutional targets require staff and students to engage in sustainability education and training, supporting the university's aim to secure a STARS rating.

Reporting Limitations and Omissions

Reporting against GRI standards in this section is subject to several specific limitations:

For GRI 3-1, the university does not report a formal process for identifying, prioritising, or consulting on material impacts, as the topic set is predetermined by the STARS framework.

For Disclosure 3-2, the covered topics represent predefined STARS credit areas rather than an institution-specific materiality determination. Additionally, changes in material topics compared to previous reporting periods are not reported.

For Disclosure 3-3, management approaches are documented at the institutional level rather than topic by topic. The source material records progress and strategic outcomes, but does not distinguish actions that prevent potential harm from those that remediate actual harm, nor does it specify direct versus indirect impact involvement across business relationships or capture formal lessons learned.

Governance

Governance Structure and Composition

The highest decision-making body of Technological University Dublin is the Governing Body. This body includes representation from various university constituencies, with student representatives, academic staff representatives, and staff members representing non-managerial workers all holding seats. Academic staff representatives serve as voting members on this body.

Under GRI 2-9, there are several limitations to the available data. The source material provides qualitative descriptions of representation but does not contain the detailed numeric composition of the Governing Body required by Disclosure 2-9-c. Furthermore, the source does not record the number of executive and non-executive members, their independence, tenure, other significant positions held, or the demographic composition of the body by gender and under-represented social groups.

Delegation of Responsibility for Managing Impacts

Responsibility for coordinating and managing sustainability across the institution is delegated to the Vice President for Sustainability. This role provides strategic direction, leadership, and oversight for the university's sustainability activities. The Vice President governs several sustainability functions, which comprise Sustainability Education, Decarbonisation, Sustainability Intelligence, and Societal Engagement, as well as a dedicated sustainability group for action research and innovation projects.

Each sustainability function is led by a designated head of function. The sustainability group includes project managers, innovation leads, and Green-Campus Co-Chairs. Additionally, the Campus & Estates department works in close coordination with the Vice President for Sustainability to implement environmental policies and energy action plans.

Several reporting gaps exist under GRI 2-13. The exact reporting line from these sustainability officers to the Governing Body is not consistently defined in the source material. Additionally, the source framework does not collect information on whether or how often these executives report directly to the Governing Body on sustainability impacts, which is a requirement of Disclosure 2-13-b.

Role in Sustainability Reporting

For the purposes of sustainability reporting, the university submitted an executive cover letter signed by a senior executive. However, under GRI 2-14, this endorsement does not equate to a formal review and approval of the sustainability report by the Governing Body itself. The source material does not record who approved the final content, whether material topics were formally reviewed by the Governing Body, or the specific text of the executive letter.

Remuneration and Compensation

The annual total compensation ratio, which measures the factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee, is 8.08.

This figure is subject to a significant methodological caveat under GRI 2-21. The standard GRI 2-21 disclosure requires dividing the highest-paid individual's compensation by the median compensation of all other employees. The metric reported here instead utilises the lowest-paid full-time employee as the denominator. This produces a top-to-bottom spread rather than a top-to-typical ratio, meaning the figure is not comparable to standard GRI 2-21 ratios published by other organisations. Furthermore, this metric is part of an optional credit within the reporting framework, meaning peer institutions do not consistently report it.

Unreported Governance Disclosures

A number of governance disclosures required by the GRI standards are not covered by the source material. Regarding the nomination and selection of the highest governance body (GRI 2-10), the source does not report the criteria or processes for nominating, selecting, or removing members of the Governing Body, recording only whether specific constituencies hold representation and voting rights. For the chair of the highest governance body (GRI 2-11), the source does not report whether the chair is also a senior executive, nor how potential conflicts of interest are managed.

The role of the Governing Body in overseeing the management of impacts (GRI 2-12) is also omitted; the source does not describe the role of this body in overseeing due diligence, engaging stakeholders, or reviewing the effectiveness of the university's management of sustainability impacts. Furthermore, the processes for preventing and mitigating conflicts of interest on the Governing Body (GRI 2-15), including disclosures of cross-board memberships or related-party transactions, are not reported.

The university does not report the communication of critical concerns (GRI 2-16), meaning the total number and nature of critical concerns escalated to the Governing Body are not tracked. Measures taken to advance the collective knowledge of the Governing Body on sustainable development (GRI 2-17) are not reported, and the processes for evaluating the performance of the Governing Body (GRI 2-18), including whether such evaluations are independent, are not covered. Finally, the specific remuneration policies for senior executives and the Governing Body (GRI 2-19), alongside the processes and independent committees involved in determining remuneration (GRI 2-20), are not reported.

Strategy, policies and practices

Strategic Vision and Policy Commitments

Technological University Dublin frames its sustainability vision around a commitment to establishing an equitable, sustainable, and environmentally responsible institution. This vision is articulated across several core strategic documents, including its Strategic Intent plan, Sustainability Strategy, Climate Action Roadmap, and regular progress reports on the United Nations Sustainable Development Goals. Strategic leadership for climate action and sustainability governance is provided by a Vice President for Sustainability, who oversees implementation across functional areas including sustainability education and campus decarbonisation.

To fulfil Disclosure 2-22, GRI standards require a strategic statement signed by the highest governance body or most senior executive. The institutional records set out the strategic vision but do not attribute it to a named signatory.

Under Disclosure 2-23, public policy commitments are recorded where they carry formal reporting requirements. These published plans establish broad organizational goals. They

do not explicitly state commitments to human rights frameworks, the UN Guiding Principles, or dedicated due diligence processes, nor do the records capture commitments that lack mandatory reporting obligations.

Embedding Policies across Operations

The institution embeds environmental and social expectations into its supply chain through a published supplier code of conduct. For internal operations, annual sustainability training opportunities are provided for non-academic personnel. Curriculum transformation and staff upskilling are driven by a dedicated sustainability education team, which coordinates an institutional toolkit, strategic educational models, and international academic partnerships.

With respect to Disclosure 2-24, the available material records operational achievements and training availability, but does not detail internal allocations of responsibility, procedural integration into routine operations, or the management of policy commitments throughout business relationships. Furthermore, employee training disclosures focus on general sustainability topics for non-academic staff rather than training on specific policy commitments for all workforce categories.

Grievance Resolution and Mechanisms for Concerns

Processes for resolving grievances and protections for whistleblowers are published and accessible to employees. Human rights, employee protections, and advisory mechanisms are integrated through internal human resources policies, union representation, and national workplace relations bodies, aligned with the European Convention on Human Rights.

For Disclosure 2-25 and Disclosure 2-26, the institution confirms that information on grievance resolution and whistleblower protections is published for staff. The records do not describe the operational steps of these mechanisms, their usage rates, or their evaluated effectiveness. Additionally, while Disclosure 2-25 and Disclosure 2-26 cover all impacted stakeholders and individuals in business relationships, the available disclosures relate strictly to internal employees.

Membership Associations and Regulatory Compliance

Regarding Disclosure 2-28, institutional endorsements of external sustainability charters and frameworks are recorded within strategic planning commitments. However, signing formal charters is distinct from holding organizational memberships in external associations, which are not tracked in the source material.

Under Disclosure 2-27, institutions must report significant instances of non-compliance with laws and regulations, along with any associated monetary fines or sanctions. Technological University Dublin does not collect regulatory compliance or enforcement data within this reporting framework, and no compliance metrics are reported.

Stakeholder engagement

Student Consultation

Technological University Dublin engages students in university decision-making, planning, and policy formulation through direct representation on standing bodies, working groups, and regular university surveys. Student representation is primarily coordinated through the Students' Union. Standing university committees and governance structures with active student involvement include the University Student Committee, the Green Campus committee, the Student Finance Committee, the Research Ethics Committee, and the EUt+ Governing Body.

Staff Consultation

Academic staff are consulted on institutional policies, resource allocation, and strategy through multiple governance committees and formal channels. The University Executive Team includes academic Deans to ensure academic leadership is reflected in resource allocation decisions. Academic staff participate in decisions through Faculty and School Boards, as well as academic quality assurance mechanisms such as the Academic Quality Assurance and Enhancement Committee. Furthermore, academic staff are represented by a trade union that is formally consulted on relevant operational and strategic matters as a social partner.

Community Engagement

The university maintains ongoing channels and standing arrangements that enable non-affiliated, community-based organisations to participate in institutional governance. Ad hoc mechanisms and project-level consultations are also deployed for local community engagement. For example, community members have direct input into decarbonisation planning through collaboration between local groups—such as the Stoneybatter Sustainable Energy Community—and university departments, including TU Dublin Estates and Campus Planning, Decarbonisation and Sustainability Intelligence, alongside the Grangegorman Development Agency. This collaboration explores the provision and distribution of renewable energy from the Grangegorman geothermal project through a district heating network. Broader public and community engagement is additionally supported through research impact frameworks and community engagement pilots across academic faculties.

Reporting Limitations and Omissions

In accordance with GRI 2-29, comprehensive reporting requires details on how stakeholders are identified and how the organisation ensures that engagement is meaningful. The reporting framework utilised here focuses on specific internal and local constituencies, omitting systematic coverage of suppliers, commercial customers, or vulnerable groups. Data limitations also affect the detail available for certain student consultation mechanisms.

Regarding GRI 2-30, the institution does not report the percentage of total employees covered by collective bargaining agreements. Available data frameworks record policies on freedom of association and living wages for contractors, but do not track overall employee collective bargaining coverage.

Environmental performance

Energy Performance

Total annual energy consumption is 38,391 Megawatt-hours . This comprises total electricity consumption of 15,053 Megawatt-hours and total stationary fuel consumption of 21,072 Megawatt-hours .

The breakdown of stationary fuels includes natural gas at 21,056 Megawatt-hours and heating oil at 16 Megawatt-hours . Consumption of coal or coke (0 Megawatt-hours) and propane or LPG (0 Megawatt-hours) are both reported as zero, as is the category for other stationary fuels.

Annual renewable energy consumption stands at 8,397.21 Megawatt-hours . Renewable stationary fuels account for 0.21 Megawatt-hours . This indicates that the institution's renewable energy is almost entirely derived from purchased electricity rather than renewable fuels. Total heating and cooling from off-site sources is 2,266 Megawatt-hours . On-site renewable electricity exported is 0 Megawatt-hours .

For intensity metrics, the annual energy consumption per person is 1,520.74 Kilowatt-hours (with the denominator defined as full-time equivalent students and employees). The annual energy consumption per unit of floor area is 182.05 Kilowatt-hours per square meter (with the denominator defined as gross floor area).

Reporting Notes on Energy: GRI 302-1 requires energy consumption to be reported in joules or multiples, whereas the source data is reported in megawatt-hours. To convert these figures to megajoules, a standard conversion factor must be applied.

Water Performance

Total water withdrawal is 56,570 Cubic meters . Potable water from off-site sources is 56,570 Cubic meters . Potable water from on-site sources is 0 Cubic meters . Because on-site abstraction is zero, potable water from off-site sources represents the sole source of water withdrawal for the institution.

Water Management and Risks: The physical water quantity risk for the main campus is classified as medium-high. While the institution harvests rainwater on-site for storage and use, the specific volume harvested is not quantified.

Reporting Notes on Water: GRI 303-3 requires water withdrawal to be reported in megalitres, whereas the source data is provided in cubic metres. To convert these values to megalitres, they must be divided by the appropriate metric factor. Additionally, GRI

303-3 requires a breakdown of withdrawal by source and a separate figure for areas with water stress, which are not fully captured by the STARS framework.

Emissions Performance

The institution's greenhouse gas emissions are reported across Scope 1, Scope 2, and Scope 3.

For Scope 1, emissions from stationary combustion are 3,728 Metric tons of CO₂ equivalent. Mobile combustion emissions are 2 Metric tons of CO₂ equivalent. Fugitive emissions are 55 Metric tons of CO₂ equivalent. Process emissions are 0 Metric tons of CO₂ equivalent.

For Scope 2, emissions from off-site sources of electricity are 4,992 Metric tons of CO₂ equivalent on a market-based approach and 0 Metric tons of CO₂ equivalent on a location-based approach. Emissions from off-site sources of heating and cooling are 181 Metric tons of CO₂ equivalent.

For Scope 3, emissions from business travel are 410 Metric tons of CO₂ equivalent. Commuting emissions are 10,694 Metric tons of CO₂ equivalent. Emissions from purchased goods and services are 26,269 Metric tons of CO₂ equivalent. Capital goods emissions are 83 Metric tons of CO₂ equivalent. Emissions from waste generated in operations are 9 Metric tons of CO₂ equivalent. Emissions from fuel- and energy-related activities not included in Scope 1 or Scope 2 are 0 Metric tons of CO₂ equivalent.

The baseline year for Scope 1 and Scope 2 emissions is 2018 (representing the baseline period), with baseline emissions of 10,064 Metric tons of CO₂ equivalent. This baseline was adopted because it represents a pre-COVID period when electricity and gas data became consistent between utility bills and the SEAI Monitoring & Reporting platform, providing the same level of data granularity as today to enable like-for-like comparison.

The percentage reduction in Scope 1 and Scope 2 emissions from the baseline is 10.99%. The adjusted net Scope 1 and Scope 2 emissions are 8,958 Metric tons of CO₂ equivalent. Third-party certified carbon offsets are 0 Metric tons of CO₂ equivalent.

The annual Scope 1 and Scope 2 emissions intensity per person is 354.84 Kilograms of CO₂ equivalent (with the denominator defined as full-time equivalent students and employees). The emissions intensity per unit of floor area is 42.48 Kilograms per square meter (with the denominator defined as gross floor area).

Methodology and Reporting Notes on Emissions: The inventory was conducted following the GHG Protocol Corporate Standard. Scope 1 stationary combustion was calculated using consolidated data from gas bills and the SEAI platform. Scope 2 market-based electricity was calculated using electric bills and the SEAI platform. Other Scope 1 emissions were calculated using inventories of university-owned vehicles and fugitive emissions, combined with National Conversion Factors. Scope 2 heating and cooling emissions were derived from the consumption of water-waste heat from the AWS data centre feeding into the Tallaght campus, combined with National Conversion Factors.

Under Disclosure 305-1 and Disclosure 305-2, the baseline year must be reported separately for Scope 1 and Scope 2. However, the source data provides a single combined baseline that cannot be split. The percentage reduction is calculated net of purchased offsets; since the institution holds no offsets, the gross and net reductions are identical. Disclosure 305-5-b (gases included) and Disclosure 305-5-d (scopes where reductions occurred) are not reported. Additionally, "Annual scope 1 GHG emissions" and "GHG emissions from biogenic sources" under Disclosure 305-1, and "Annual scope 2 GHG emissions" under Disclosure 305-2, were mapped but left blank by the institution.

Waste Performance

The institution's annual non-hazardous waste generated is 1,768.85 Metric tons. Of this, the total non-hazardous waste diverted from disposal is 1,452.64 Metric tons. The recovery pathways for non-hazardous waste include: - Recycled: 691.73 Metric tons - Composted: 56.01 Metric tons - Prepared for reuse: 704.90 Metric tons

Non-hazardous waste disposed of to a landfill or incinerator is 316.21 Metric tons.

For construction and demolition waste, the annual amount generated is 1,244.08 Metric tons. The total construction and demolition waste diverted from disposal is 1,121.85 Metric tons. The recovery pathways for this stream include: - Recycled: 531.95 Metric tons - Prepared for reuse: 589.89 Metric tons

Construction and demolition waste disposed of to a landfill or incinerator is 122.23 Metric tons.

Waste Management and Minimisation: The university operates a surplus programme to store institution-owned items no longer needed for eventual sale, donation, or reuse. It also participates in a reuse programme allowing employees and students to donate personal items for redistribution. The university has eliminated at least one form of single-use disposable plastic on-site.

Under the composting programme, some food service providers offer compostable alternatives to single-use plastics certified under the bioplastics standard. These are disposed of in organic bins collected by Panda, the waste service provider. Paper-based alternatives, such as paper cups, must be disposed of in paper recycling bins rather than compostable bins. A hazardous waste management protocol is in place to minimize the use of hazardous materials, and the university has sufficient data on construction and demolition waste to track its performance.

Reporting Notes on Waste: Disclosure 306-3 requires total waste generated, including hazardous waste, broken down by composition. Because the source framework only quantifies non-hazardous and construction-and-demolition waste, total waste cannot be reported. Disclosure 306-4-d requires a split of recovery operations on-site versus off-site, which is not collected. Disclosure 306-5 requires a split of disposal across four operations, whereas the source data merges landfill and incineration into a single figure.

Supplier Environmental Assessment

The percentage of bid solicitations that identify supplier sustainability considerations is 0%. The institution's supplier code of conduct includes expectations regarding environmental impact that exceed regulatory compliance.

Reporting Notes on Supplier Assessment: Disclosure 308-1 requires the percentage of new suppliers actually screened using environmental criteria. The source data reports the percentage of bid solicitations identifying sustainability considerations, which is a broader metric and does not measure actual supplier screening.

Unreported Disclosures and Data Limitations

Several disclosures required by the GRI standards are not reported due to limitations in the source framework or the nature of the institution's operations: - **GRI 301-1, GRI 301-2, and GRI 301-3 (Materials)**: These disclosures require the weight or volume of materials used, recycled input materials, and reclaimed products. Because a university does not manufacture physical products, these disclosures have no applicable subject. - **GRI 302-2 (Energy outside the organisation)**: Upstream and downstream energy consumption in the value chain is not tracked. - **GRI 302-4 (Reduction of energy consumption)**: Absolute energy reductions in joules against a baseline year are not recorded. - **GRI 302-5 (Reductions in energy requirements of products and services)**: Not applicable as the university does not sell energy-consuming products. - **GRI 303-2 (Management of water discharge-related impacts)**: No data exists regarding effluent discharge quality standards. - **GRI 305-6 and GRI 305-7 (Air Emissions)**: Emissions of ozone-depleting substances, nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions are not tracked. - **GRI 306-1 (Waste generation and significant waste-related impacts)**: Process descriptions of material flows causing waste are not available. - **GRI 308-2 (Negative environmental impacts in the supply chain)**: Supplier-level assessment outcomes and corrective actions are not collected.

Social and economic performance

Pay and Employment Conditions

TU Dublin tracks standard entry-level wages and compensation benchmarks to evaluate equitable remuneration across its workforce. The wage floor for regular permanent employees is established at 16.53. For student workers, the local hourly minimum wage is 12.70. The university reports that 100% of its employees receive remuneration equivalent to or exceeding the local living wage, which is defined as 13.85.

In terms of employee benefits and leave, 100% of employees are eligible for paid all-gender family or medical leave. Under the Maternity Protection Acts, which cover all pregnant, recently post-natal, or breastfeeding staff—including transgender males who

have obtained a gender recognition certificate—employees are entitled to 26 of paid maternity leave.

The university's gender pay gap reporting indicates that the primary driver of the pay gap is an imbalance of genders across different roles and grades. Female employees are concentrated in the lower pay quartiles, while male employees comprise the majority in the upper pay grades. To address these structural imbalances, the university has delivered bespoke in-house leadership development programmes for senior managers and secured a membership agreement with AdvanceHE to support external leadership development for female employees. Additionally, faculties and schools have aligned their Athena SWAN submission schedules with the institutional strategic plan to promote gender equality.

Occupational Health and Safety

The university maintains a comprehensive safety management system designed to ensure compliance with health and safety legislation and to promote employee participation. This system is governed by the University Safety, Health and Welfare Steering Committee, alongside Campus Safety, Health and Welfare Committees and various specialised working groups. These bodies bring together management and worker representatives to develop, review, and coordinate workplace health and safety policies.

TU Dublin provides physical and behavioural health services to its employees. The university also offers free or reduced-cost fitness activities, as well as contemplative and spiritual activities. To support a healthy working environment, smoking and tobacco use are prohibited across all campus locations.

Workforce Diversity

The university monitors the representation of women and marginalised gender identities across its staffing categories. Women or individuals with marginalised gender identities comprise 41.09% of executive staff, 41.55% of regular permanent academic staff, and 56.40% of regular permanent non-academic staff. Ethnic diversity indices are also recorded for executive, academic, and non-academic staff categories.

Data Limitations and Omissions

Several reporting gaps exist between the university's current data collection and the full requirements of the GRI standards. Regarding market presence and procurement, the student minimum wage represents the national statutory minimum in Ireland rather than a university-specific entry rate, and the ratio of standard entry-level wages to the local minimum wage by gender is unanswerable under Disclosure 202-1. The proportion of senior management hired from the local community (GRI 202-2) is not tracked, and local supplier spending (GRI 204-1) is omitted as the university measures social impact purchasing rather than geographic locality.

For employment conditions, new employee hires and turnover rates (GRI 401-1) are not reported. Benefit eligibility (GRI 401-2) is reported as an institution-wide rate without the required breakdown comparing full-time employees to temporary or part-time staff. Parental leave reporting (GRI 401-3) is limited to policy descriptions and maternity leave duration; the university does not track the specific headcounts, uptake rates, or return-to-work and retention rates by gender.

Within occupational health and safety, the safety management system's specific legal compliance standards, worker coverage counts (GRI 403-8), and processes for hazard identification, risk assessment, or incident investigation (GRI 403-2) are not detailed. Occupational health training (GRI 403-5), business relationship impacts (GRI 403-7), work-related injuries (GRI 403-9), and work-related ill health (GRI 403-10) are not reported. General employee health services are recorded, but specific occupational health functions (GRI 403-3) and detailed committee responsibilities or meeting frequencies (GRI 403-4) are omitted.

Finally, for diversity and equal opportunity, gender representation is reported as a single combined category for women and marginalised genders rather than a distinct gender split under GRI 405-1. Employee age-group distribution is not tracked, and the ethnic diversity data contains formatting anomalies that limit standard numerical parsing. The ratio of basic salary and remuneration of women to men (GRI 405-2) is not reported.

GRI content index

Reported	Partially reported	Not reported	Not assessed
26	15	37	0

“With reference to”, not “in accordance with.” GRI reserves in accordance for reports answering every Universal Disclosure (GRI 2) plus all disclosures for each material topic. This report does not, so it uses the weaker and correct claim.

GRI 2: General Disclosures 2021

Disclosure	Status	Value / reason	Notes
2-1 Organizational details	Reported	Institutional control: Public	GRI 2-1 also requires the legal name, the location of headquarters and the countries of operation. STARS carries none of these as fields — they are report metadata, not credit data.

Disclosure	Status	Value / reason	Notes
2-2 Entities included in the organization's sustainability reporting	Reported	Narrative outlining the institutional boundary used to complete this report: TU Dublin consists of three campuses, namely City, Tallaght, and Blanchardstown. The Ci...	GRI 2-2-b/c additionally ask whether the reporting entities differ from those in the financial statements and how minority interests are consolidated. STARS asks neither.
2-3 Reporting period, frequency and contact point	Partially reported	Performance year for scope 1 and 2 GHG emissions: 2023 List of personnel who led the reporting process: Dr. Philippe Lemarchand - Head of Sustainability Intelligence Dr Zeyan Zhao - Data Anal...	STARS has no single reporting period, and the per-credit years diverge inside one submission: Cork's credits run from 2023 (construction waste) to 2025 (living wage, investment), Berkeley's from 2023 to 2024. Only TU Dublin is uniform, at 2023. Any single period stated for a GRI report built on this data would be wrong for some of its figures. GRI 2-3 also requires the reporting frequency, the publication date and a contact point; STARS collects none of these. Named preparers are not a designated contact point: STARS records names and roles without contact details, and does not say who should receive enquiries.
2-4 Restatements of information	Not reported	No STARS data exists for this disclosure.	STARS v2.2 and earlier scored Operations credits against the institution's own baseline and v3.0 scores against a peer group, so cross-version figures are not comparable in the first place — see CLAUDE.md 6.4.

Disclosure	Status	Value / reason	Notes
2-5 External assurance	Reported	Were any independent audits or external assurance processes used in the preparation of this report?: No	GRI 2-5 additionally requires the assurance standard used, the level of assurance obtained, the limitations of the process and the relationship with the assurance provider. STARS captures none of these; the free-text field is optional and unstructured. Only populated where the institution answered yes to the assurance question, so it is absent for most submissions. Not populated by this institution: PRE-4 / Narrative outlining the independent audits or external assurance processes used in the preparation of this report.
2-6 Activities, value chain and other business relationships	Partially reported	Which of the following features are included within the institutional boundary?: Agricultural school	GRI 2-6 asks for the sectors the organization is active in, its value chain, its products and services and the markets served. A list of campus features covers only the activities, and only those with a physical footprint.
2-7 Employees	Partially reported	Full-time equivalent of employees: 2,404	FTE is not a headcount: two half-time staff count as one. GRI 2-7 further requires the breakdown by employment contract (permanent / temporary), by employment type (full- / part-time), by gender and by region. STARS collects a single undifferentiated figure.
2-8 Workers who are not employees	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-9 Governance structure and composition	Reported	Are one or more academic staff representatives included as members of the institution's highest decision-making body?: Yes Are one or more staff members representing non-managerial workers included as members of the institution's highest decision-making body?: Yes Are one or more student representatives included as members of the institution's highest decision-making body?: Yes Narrative and/or website URL outlining academic staff representation on the institution's highest decision-making body: TU Dublin's highest decision-making body is Governing Body. This includes both student ...	GRI 2-9 also requires the number of executive and non-executive members, their independence, tenure, other significant positions held, and composition by gender and under-represented social group. STARS records only whether each constituency is represented. See the caveat on the academic-staff row: representation is recorded, composition is not. See the caveat on the academic-staff row. Free text of variable depth; it is not a substitute for the numeric composition GRI 2-9-c requires.
2-10 Nomination and selection of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-11 Chair of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-12 Role of the highest governance body in overseeing the management of impacts	Not reported	No STARS data exists for this disclosure.	
2-13 Delegation of responsibility for managing impacts	Reported	Does the institution have one or more sustainability officers?: Yes Is at least one of the institution's sustainability committees, officers, or offices charged with coordinating various campus constituencies in the advancement of sustainability across the entire institution?: Yes Narrative and/or website URL providing an overview of the institution's sustainability officers: TU Dublin has a VP of Sustainability, Jennifer Boyer, who is governing 4 sustainability...	GRI 2-13-b also requires whether and how often those executives report to the highest governance body. STARS does not ask. See the caveat on the sustainability-officer row. Free text; the reporting line to the highest governance body is not consistently stated.

Disclosure	Status	Value / reason	Notes
2-14 Role of the highest governance body in sustainability reporting	Partially reported	Executive cover letter: TU_Dublin_Executive_letter_STARS_Application_2024.pdf	Endorsement by a senior executive is not review and approval by the highest governance body, and STARS records neither who approved the content nor whether material topics were reviewed. The field value is an attachment filename, so the letter's text is not in the dataset.
2-15 Conflicts of interest	Not reported	No STARS data exists for this disclosure.	
2-16 Communication of critical concerns	Not reported	No STARS data exists for this disclosure.	
2-17 Collective knowledge of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-18 Evaluation of the performance of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-19 Remuneration policies	Not reported	No STARS data exists for this disclosure.	
2-20 Process to determine remuneration	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-21 Annual total compensation ratio	Partially reported	The factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee: 8.08	The denominator differs and the difference is large. GRI 2-21 divides the highest-paid individual by the MEDIAN of all other employees; STARS divides the highest-paid senior administrator by the LOWEST-paid full-time employee. The STARS figure is therefore a top-to-bottom spread, not a top-to-typical ratio, and is not comparable with any GRI 2-21 figure published elsewhere. IL-62 is also an Innovation & Leadership bonus credit, so it is optional: only TU Dublin reports it (8.08); Berkeley and Cork leave it blank.
2-22 Statement on sustainable development strategy	Partially reported	Narrative detailing the institution's guiding vision or goals for sustainability and the plan(s) in which they are published: TU Dublin's sustainability vision is centered around its commitment to creating a susta...	GRI 2-22 requires the statement to come from the highest governance body or the most senior executive. STARS records the institution's published vision without attributing it to a named signatory, so the authorship the disclosure turns on is absent.
2-23 Policy commitments	Reported	Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	GRI 2-23 specifically requires commitments to respect human rights, to the UN Guiding Principles and to due diligence. A sustainability commitment is broader and does not imply any of these. STARS asks only for commitments carrying a reporting requirement, so commitments without one are out of scope of the field.

Disclosure	Status	Value / reason	Notes
2-24 Embedding policy commitments	Reported	Does the institution have a published code of conduct to guide suppliers on the institution's social and environmental expectations for them?: Yes Does the institution make available sustainability-focused training opportunities to non-academic staff on at least an annual basis?: Yes Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform...	GRI 2-24 also requires how responsibility is allocated internally and how the commitments are embedded in strategies and procedures. STARS asks about non-academic staff only, and about sustainability training generally rather than training on the specific commitments. It describes outcomes, not the allocation of responsibility, the integration into procedures, or the handling of commitments through business relationships that GRI 2-24-a enumerates.
2-25 Processes to remediate negative impacts	Partially reported	Does the institution publish information on grievance resolution in a format that is accessible to all employees?: Yes	STARS records only that the information is published — not how the mechanism operates, who may use it, or its effectiveness — and covers employees only, where GRI 2-25 covers all affected stakeholders.
2-26 Mechanisms for seeking advice and raising concerns	Reported	Does the institution publish information on whistleblower protections in a format that is accessible to all employees?: Yes Narrative and/or website URL providing an overview of the institution's published measures to protect employee rights: This is a legal obligation covered by Article 11 of the European Convention on Human Ri...	STARS records publication, not a description of how the mechanism operates, and covers employees only. GRI 2-26 extends to all individuals, including those in business relationships. Employees only; see the caveat on the whistleblower row.
2-27 Compliance with laws and regulations	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-28 Membership associations	Partially reported	Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	Signing a charter is not membership of an association, and STARS restricts the field to commitments carrying a reporting requirement. The institution's association memberships are not collected as such.
2-29 Approach to stakeholder engagement	Reported	Description of other mechanisms used to consult students on institutional decisions, plans, or policies: Students in TU Dublin sit on a wide variety of formal committees, working groups, and e... Description of other mechanisms used to consult academic staff on institutional decisions, plans, or policies: The University committee that decides on resource allocation is the University Executiv... Narrative and/or website URL outlining the ad hoc mechanisms used during the previous three years to consult local community members on institutional decisions, plans, or policies: The Stoneybatter SEC "Cosybatter" is engaged with the Grangegorman Development Agency (... Does the institution have one or more ongoing bodies through which local community-based organizations not affiliated with the institution can democratically participate in its governance?: Yes	GRI 2-29 also asks how stakeholders are identified and how the organization ensures the engagement is meaningful. STARS asks about four fixed constituencies and does not cover suppliers, customers or vulnerable groups. See the caveat on the student-consultation row.
2-30 Collective bargaining agreements	Not reported	No STARS data exists for this disclosure.	

GRI 3: Material Topics 2021

Disclosure	Status	Value / reason	Notes
3-1 Process to determine material topics	Not reported	No STARS data exists for this disclosure.	This is a structural difference, not missing data. AASHE determined materiality for the whole higher-education sector when it designed the STARS credit set; the institution answers that fixed set rather than identifying its own impacts. PA-2 records a climate-vulnerability assessment and PA-3 records stakeholder consultation, but neither is a materiality process and neither should be presented as one.

Disclosure	Status	Value / reason	Notes
3-2 List of material topics	Partially reported	Has the institution adopted one or more measurable sustainability objectives that address campus operations?: Yes Has the institution adopted one or more measurable sustainability objectives that address teaching, learning, and/or research?: Yes Has the institution adopted one or more measurable sustainability objectives that address racial equity and/or social justice?: Yes Has the institution adopted one or more measurable sustainability objectives that address administration and/or finance?: Yes Has the institution adopted one or more measurable sustainability objectives that address campus and/or community engagement?: Yes	NOT A MATERIALITY DETERMINATION. These five areas are fixed by STARS and identical for every institution, so they say where an institution has set objectives, not which impacts it judged significant and why. GRI 3-2-b also requires changes against the previous reporting period, which a single STARS submission cannot show. Presenting these as material topics would overstate what the institution actually did. See the campus-operations row: fixed areas, not a materiality determination.
3-3 Management of material topics	Partially reported	Narrative listing the institution's measurable sustainability objectives that address campus operations: 1. TU Dublin Strategic Plan 2024 – 2028 (Ref 1) include clear measurable sustainability... Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform... Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes	Asked per material topic, and no material-topics list exists (see GRI 3-2) — so these are institution-wide answers to a question GRI asks topic by topic. GRI 3-3 also requires the impacts themselves (3-3-a), whether the organisation is involved through its own activities or its business relationships (3-3-b), and lessons learned (3-3-e-iv). STARS collects none of those. It reports outcomes rather than distinguishing actions that prevent potential harm from actions that remediate actual harm, which is the split GRI 3-3-d asks for.

GRI 202: Market Presence 2016

Disclosure	Status	Value / reason	Notes
202-1 Ratios of standard entry level wage by gender compared to local minimum wage	Reported	Percentage of employees that receive remuneration equivalent to at least a living wage: 100 Living wage: 13.85 Wage floor for regular/permanent employees: 16.53 Local hourly minimum wage for students: 12.70	PARTIALLY SATISFIES GRI 202-1, AND THE RATIO IS DERIVABLE. Both terms are in STARS: PA-13's Wage floor for regular/permanent employees is the standard entry-level wage, and PA-9's Local hourly minimum wage for students is the local statutory minimum. Berkeley $22.54/16.99 = 1.33$, Cork $16.40/14.25 = 1.15$, TU Dublin $16.53/12.70 = 1.30$. Δ TWO LIMITS REMAIN. The minimum-wage field sits in a student-employment credit, so it is the minimum applying to student workers rather than one stated for the workforce generally — in all three cases it matches the statutory local minimum, but say which figure is being used. And GRI requires the ratio BY GENDER, which STARS does not collect at any credit; that half is unanswerable, not merely unsupplied. STARS separately benchmarks pay against a LIVING wage, which is a different and higher threshold than the minimum wage and must not be substituted for it. Values are bare numbers with no currency - EUR for the Irish universities, USD for Berkeley - and are not comparable across them without saying so. It lives in PA-9, a student-employment credit, so it is the minimum applying to student workers. In all three cases it matches the local statutory minimum (Berkeley 16.99, the City of Berkeley rate; Cork 14.25; TU Dublin 12.70, Ireland's national minimum), but the scoping should be stated rather than glossed.
202-2 Proportion of senior management hired from the local community	Not reported	No STARS data exists for this disclosure.	No STARS credit collects this.

GRI 204: Procurement Practices 2016

Disclosure	Status	Value / reason	Notes
204-1 Proportion of spending on local suppliers	Not reported	No STARS data exists for this disclosure.	

GRI 301: Materials 2016

Disclosure	Status	Value / reason	Notes
301-1 Materials used by weight or volume	Not reported	No STARS data exists for this disclosure.	This is a sector-fit finding of the same kind as AC-1 and EN-1 on the STARS side: the framework and the institution type do not line up.
301-2 Recycled input materials used	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
301-3 Reclaimed products and their packaging materials	Not reported	No STARS data exists for this disclosure.	

GRI 302: Energy 2016

Disclosure	Status	Value / reason	Notes
302-1 Energy consumption within the organization	Reported	Total annual energy consumption: 38,391 Megawatt-hours Total electricity consumption: 15,053 Megawatt-hours Total stationary fuel consumption: 21,072 Megawatt-hours Annual renewable energy consumption: 8,397.21 Megawatt-hours Renewable stationary fuels: 0.21 Megawatt-hours Total heating and cooling from off-site sources: 2,266 Megawatt-hours On-site renewable electricity exported: 0 Megawatt-hours Natural gas: 21,056 Megawatt-hours Heating oil: 16 Megawatt-hours Coal/coke: 0 Megawatt-hours Propane/LPG: 0 Megawatt-hours	GRI 302-1 expects joules or multiples and requires fuel consumption split into renewable and non-renewable. STARS reports megawatt-hours - convertible, but state the conversion. SCOPE MISMATCH. GRI 302-1-b is 'Total fuel consumption from renewable sources'. This STARS field also includes renewable ELECTRICITY (Berkeley 18,173 MWh), so it is broader than GRI's line and would overstate renewable fuel. The precise match is 'Renewable stationary fuels' - see the row below, which is ~0 for all three. Use this field only for a general renewables statement, never for GRI 302-1-b. Correct but near-empty: 0.21 MWh for TU Dublin, 0 for Cork and Berkeley. A finding in itself - these universities' renewable energy is almost entirely purchased electricity, not renewable fuel. GRI 302-1-b is therefore honestly reportable as ~zero. GRI 302-1 requires joules; STARS reports MMBtu or MWh, so the value must be converted before it is cited as a GRI figure. Zero for all three institutions in the current reporting year, so the mapping is correct but currently carries no signal. GRI 302-1 expects joules; STARS reports MWh — convertible, but state the conversion. Zero at Cork; a small residual at TU Dublin and Berkeley. Units are MWh, not joules. A reported zero, not missing data. STARS also carries an Other stationary fuels catch-all, also zero everywhere, which is what makes this list of fuel types complete rather than merely partial.
302-2 Energy consumption outside of the organization	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
302-3 Energy intensity	Reported	Annual energy consumption per person: 1,520.74 Kilowatt-hours Annual energy consumption per unit of floor area: 182.05 Kilowatt-hours per square meter	Denominator (FTE students + employees) must be disclosed with the ratio. Denominator is gross floor area; must be disclosed with the ratio.
302-4 Reduction of energy consumption	Not reported	No STARS data exists for this disclosure.	
302-5 Reductions in energy requirements of products and services	Not reported	No STARS data exists for this disclosure.	

GRI 303: Water and Effluents 2018

Disclosure	Status	Value / reason	Notes
303-1 Interactions with water as a shared resource	Reported	Level of physical water quantity risk for the institution's main campus: Medium-high Does the institution harvest rainwater on-site for storage and use?: Yes	A risk grade is not the description GRI 303-1 asks for: it says nothing about how water is withdrawn, consumed or discharged, how the impacts were identified, or how the institution works with stakeholders on shared water resources. It also covers the main campus only, where a multi-campus institution has several. Only one of the three institutions quantifies the volume harvested; the other two answer the yes/no only.
303-2 Management of water discharge-related impacts	Not reported	No STARS data exists for this disclosure.	
303-3 Water withdrawal	Reported	Total water withdrawal: 56,570 Cubic meters Potable water from off-site sources: 56,570 Cubic meters Potable water from on-site sources: 0 Cubic meters	GRI 303-3 requires a breakdown by source AND a separate figure for areas with water stress. STARS collects neither, so 303-3 cannot be fully satisfied from STARS alone. UNITS: GRI 303-3 requires megaliters and STARS reports cubic meters. Divide by 1,000 before citing the figure as a GRI 303-3 value, and state the conversion — the same treatment GRI 302-1 gets for megawatt-hours against joules. Maps to the specific GRI 303-3-a-v category 'Third-party water'. It is the ONLY withdrawal source these universities have — on-site abstraction is zero for all three — so this equals the total. Zero for all three institutions, which is itself the finding: none of them abstracts its own water. Retained so the GRI 303-3 source breakdown is complete rather than silent.

Disclosure	Status	Value / reason	Notes
303-4 Water discharge	Not reported	Assessed: the nearest STARS field (OP-3 / Annual volume of water recovered and/or returned) was reviewed and rejected as an answer to this disclosure.	GRI 303-4 requires discharge by destination, freshwater/other water split, and treatment level. STARS captures none of that. Weak mapping - verify before use.
303-5 Water consumption	Not reported	Assessed: the nearest STARS field (OP-3 / Annual potable water use) was reviewed and rejected as an answer to this disclosure.	DEFINITIONS DIFFER. GRI 303-5 water consumption = withdrawal minus discharge. STARS 'annual potable water use' is potable supply only and is not computed that way. Do not present this as GRI 303-5 without recomputing.

GRI 305: Emissions 2016

Disclosure	Status	Value / reason	Notes
305-1 Direct (Scope 1) GHG emissions	Reported	Scope 1 GHG emissions from stationary combustion: 3,728 Metric tons of CO2 equivalent Scope 1 GHG emissions from mobile combustion: 2 Metric tons of CO2 equivalent Scope 1 GHG fugitive emissions: 55 Metric tons of CO2 equivalent Scope 1 GHG process emissions: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-1 additionally requires biogenic CO2 to be reported separately from the gross figure. GRI asks for biogenic CO2 specifically; the STARS field is CO2-equivalent and may not be the same boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-1-e) and the consolidation approach (305-1-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 1 GHG emissions; OP-6 / GHG emissions from biogenic sources.

Disclosure	Status	Value / reason	Notes
305-2 Energy indirect (Scope 2) GHG emissions	Reported	Scope 2 GHG emissions from off-site sources of electricity (market-based): 4,992 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of electricity (location-based): 0 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of heating and cooling: 181 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-2 requires location-based and, where available, market-based figures reported separately. Do not present a single scope 2 number without saying which method. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-2-e) and the consolidation approach (305-2-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 2 GHG emissions.

Disclosure	Status	Value / reason	Notes
305-3 Other indirect (Scope 3) GHG emissions	Reported	Scope 3 GHG emissions from business travel: 410 Metric tons of CO2 equivalent Scope 3 GHG emissions from commuting: 10,694 Metric tons of CO2 equivalent Scope 3 GHG emissions from purchased goods and services: 26,269 Metric tons of CO2 equivalent Scope 3 GHG emissions from capital goods: 83 Metric tons of CO2 equivalent Scope 3 GHG emissions from waste generated in operations: 9 Metric tons of CO2 equivalent Scope 3 GHG emissions from fuel- and energy-related activities not included in scope 1 or scope 2: 0 Metric tons of CO2 equivalent	
305-4 GHG emissions intensity	Reported	Annual scope 1 and 2 GHG emissions per person: 354.84 Kilograms of CO2 equivalent Annual scope 1 and 2 GHG emissions per unit of floor area: 42.48 Kilograms per square meter	GRI 305-4 requires the denominator to be stated. Here it is FTE students + employees, not a corporate revenue or output metric. Denominator is gross floor area in square meters; must be disclosed alongside the ratio.

Disclosure	Status	Value / reason	Notes
305-5 Reduction of GHG emissions	Reported	Percentage reduction in scope 1 and 2 GHG emissions from baseline: 10.99 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Adjusted net scope 1 and 2 GHG emissions: 8,958 Metric tons of CO2 equivalent Third party certified carbon offsets: 0 Metric tons of CO2 equivalent	GRI 305-5 asks for reductions as an ABSOLUTE quantity in metric tons CO2e; STARS gives a percentage. △ THAT PERCENTAGE IS NET OF PURCHASED OFFSETS. STARS computes it from Adjusted net scope 1 and 2 GHG emissions, not from the gross total printed alongside it, so the two do not reconcile wherever an institution holds offsets: Berkeley's reduction is 6.54% gross and 9.83% net, a third of the headline figure being bought rather than achieved. Cork and TU Dublin agree on both bases only because their offsets are zero. Deriving the absolute reduction as baseline minus current gives the GROSS figure — correct, but not the number STARS prints. Say which basis is being quoted, and report the offsets separately as GRI 305-5's compilation requirement 2.9.5 demands. Derive it; do not present the baseline itself as a reduction. The subtraction is only valid because both figures cover the same combined scope 1 + 2 boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. GRI 305-5-b (gases included) and 305-5-d (which scopes the reductions occurred in) remain unanswered — STARS reports the reduction against the combined scope 1 + 2 total without attributing it to either. GROSS AND NET DIVERGE WHERE OFFSETS EXIST. Berkeley's reduction is 6.54% gross and 9.83% net; Cork's and TU Dublin's are identical either way because they hold no offsets. State which basis is being quoted. Berkeley holds 4,858 tCO2e of third-party certified offsets, which is the entire difference between its gross and adjusted-net reduction — about a third of the headline figure. STARS also reports a Net carbon sinks field which is CAPPED and does NOT equal the deduction actually applied, so do not use it to reconcile the two percentages.
305-6 Emissions of ozone-depleting substances (ODS)	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no ODS data at any credit. Cannot be reported from this dataset.
305-7 Nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no criteria-air-pollutant data. Cannot be reported from this dataset.

GRI 306: Waste 2020

Disclosure	Status	Value / reason	Notes
306-1 Waste generation and significant waste-related impacts	Not reported	No STARS data exists for this disclosure.	
306-2 Management of significant waste-related impacts	Reported	Does the institution have a surplus program through which institution-owned items that are no longer needed are stored for eventual sale, donation, or reuse?: Yes Does the institution have or participate in a reuse program through which employees and/or students can donate personal items for redistribution?: Yes Has the institution eliminated the on-site use of at least one form of single-use disposable plastic?: Yes Does the institution have a hazardous waste management program or protocol that includes measures to minimize or reduce the use of hazardous materials?: Yes Narrative and/or website URL providing an overview of the institution's composting program: Some of TU Dublin food service providers provide compostable alternatives to single-use... Does the institution have sufficient data on construction and demolition waste to pursue this indicator?: Yes	GRI 306-3 additionally requires hazardous waste to be quantified separately from non-hazardous. STARS quantifies only non-hazardous and construction-and-demolition waste, so the tonnage is unavailable. It states data sufficiency as a yes/no rather than describing the collection process, and covers construction and demolition waste only.

Disclosure	Status	Value / reason	Notes
306-3 Waste generated	Reported	Annual non-hazardous waste generated: 1,768.85 Metric tons Annual construction and demolition waste generated: 1,244.08 Metric tons	NOT EQUIVALENT - a subset. GRI 306-3-a is TOTAL waste generated including hazardous, broken down by composition. STARS reports non-hazardous only and collects no hazardous tonnage at any credit, so 306-3 cannot be fully satisfied. Do not present non-hazardous waste as the organisation's total waste. (Contrast the 306-4 and 306-5 rows, which are component : GRI has explicit non-hazardous lines at 306-4-c and 306-5-c for the STARS figures to answer, whereas 306-3 has no non-hazardous sub-requirement at all — which is why this row is weaker than those two, not equal to them.)
306-4 Waste diverted from disposal	Reported	Total non-hazardous waste diverted from disposal: 1,452.64 Metric tons Non-hazardous waste recycled: 691.73 Metric tons Non-hazardous waste composted: 56.01 Metric tons Non-hazardous waste prepared for reuse: 704.90 Metric tons Total construction and demolition waste diverted from disposal: 1,121.85 Metric tons Construction and demolition waste recycled: 531.95 Metric tons Construction and demolition waste prepared for reuse: 589.89 Metric tons	Exact scope match on GRI 306-4-c, including its split by recovery operation (reuse / recycling / other) from the rows below. GRI 306-4-d additionally wants each operation split on-site vs off-site, which STARS does not collect. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions. Reuse is a higher-value recovery route than recycling under the waste hierarchy, so omitting it understates the quality of diversion as well as the arithmetic. Cork recovers 1,162.73 of 6,837.95 tonnes this way.
306-5 Waste directed to disposal	Reported	Non-hazardous waste disposed of to a landfill or incinerator: 316.21 Metric tons Construction and demolition waste disposed of to a landfill or incinerator: 122.23 Metric tons	WEAKER THAN THE 306-4 EQUIVALENT: GRI 306-5-c also requires the total split across four disposal operations — incineration with energy recovery, incineration without, landfilling, other — and STARS merges landfill and incineration into a single figure. The waste-to-energy percentage field would separate incineration with recovery, but only two of the three institutions report it, so the split cannot be derived consistently. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.

GRI 308: Supplier Environmental Assessment 2016

Disclosure	Status	Value / reason	Notes
308-1 New suppliers that were screened using environmental criteria	Partially reported	Does the institution's supplier code of conduct include one or more expectations in regard to environmental impact that exceed or are additional to regulatory compliance?: Yes Percentage of bid solicitations that identify supplier sustainability considerations: 0	GRI 308-1 requires a percentage of new suppliers actually screened. STARS reports the existence of the criteria, not their application to any supplier, so no percentage can be derived. The denominator is bid solicitations, not new suppliers, and one solicitation may attract many suppliers or none. 'Sustainability considerations' is also broader than the environmental criteria GRI 308-1 specifies. The figure is 0 percent at TU Dublin, so a low value here should not be read as a screening failure without checking the product-specification field alongside it.
308-2 Negative environmental impacts in the supply chain and actions taken	Not reported	No STARS data exists for this disclosure.	

GRI 401: Employment 2016

Disclosure	Status	Value / reason	Notes
401-1 New employee hires and employee turnover	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no hiring or turnover figures.
401-2 Benefits provided to full-time employees that are not provided to temporary or part-time employees	Partially reported	Percentage of employees eligible for paid all-gender family/medical leave: 100	GRI 401-2 turns on the contrast between full-time employees and temporary or part-time employees, and asks for the benefits by significant location of operation. STARS gives a single institution-wide eligibility rate with no employment-type split, so the comparison the disclosure exists to make cannot be drawn.
401-3 Parental leave	Partially reported	Number of weeks of paid maternity leave: 26 Narrative and/or website URL providing an overview of the maternity leave options available to employees: The Maternity Protection Acts cover the entitlements for allstaff who are pregnant, hav...	GRI 401-3 requires headcounts by gender: employees entitled to parental leave, those who took it, those who returned, those still employed twelve months later, and the resulting return-to-work and retention rates. STARS reports none of these — it reports the policy, not its uptake. 'Maternity' is also narrower than GRI's 'parental'. Descriptive only; supplies none of the headcounts or rates GRI 401-3 requires.

GRI 403: Occupational Health and Safety 2018

Disclosure	Status	Value / reason	Notes
403-1 Occupational health and safety management system	Partially reported	Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	STARS never asks the 403-1 question, so an answer only appears where the institution volunteered it. Nothing records whether the system exists because of a legal requirement, which standard it follows, or which workers, activities and workplaces it covers — that is 403-1-b, and it is absent.
403-2 Hazard identification, risk assessment, and incident investigation	Not reported	No STARS data exists for this disclosure.	
403-3 Occupational health services	Partially reported	Does the institution make physical health services available to employees?: Yes	General employee health services are not occupational health services: GRI 403-3 is about the function that identifies and eliminates workplace hazards, and about how worker health data is kept confidential. STARS asks about neither.
403-4 Worker participation, consultation, and communication on occupational health and safety	Reported	Does the institution have an institution-wide health and safety committee or network of committees that brings together workers and management in the development and review of workplace health and safety policies and procedures?: Yes Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	GRI 403-4-b further requires the committee's responsibilities, meeting frequency, decision-making authority, and whether any workers are unrepresented. STARS records existence only. Depth varies by institution; meeting frequency and decision-making authority are not consistently stated.
403-5 Worker training on occupational health and safety	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
403-6 Promotion of worker health	Reported	Does the institution make physical health services available to employees?: Yes Does the institution make behavioral health services available to employees?: Yes Does the institution make free or reduced cost fitness activities available to employees?: Yes Does the institution prohibit smoking and tobacco use across the entire campus?: Yes Does the institution make contemplative and/or spiritual activities available to employees?: Yes	GRI 403-6-a also requires the scope of access provided; STARS records availability as a yes/no, with the scope left to the narrative. A prohibition is a control rather than a voluntary promotion service; STARS also records the weaker variants (indoor-only, restricted outdoor smoking) in separate fields.
403-7 Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Not reported	No STARS data exists for this disclosure.	
403-8 Workers covered by an occupational health and safety management system	Not reported	No STARS data exists for this disclosure.	
403-9 Work-related injuries	Not reported	No STARS data exists for this disclosure.	PA-11 (Health, Safety and Wellbeing) contains no injury figures - its only numeric fields are STARS scoring artefacts. Cannot be reported.
403-10 Work-related ill health	Not reported	No STARS data exists for this disclosure.	PA-11 contains no ill-health figures. Cannot be reported.

GRI 405: Diversity and Equal Opportunity 2016

Disclosure	Status	Value / reason	Notes
405-1 Diversity of governance bodies and employees	Reported	Ethnic diversity index for executive staff: 0 Revised on Nov. 24, 2025 Percentage of executive staff that identify as women or other marginalized gender identities: 41.09 Percentage of regular/permanent academic staff that identify as women or other marginalized gender identities: 41.55 Percentage of regular/permanent non-academic staff that identify as women or other marginalized gender identities: 56.40 Ethnic diversity index for academic staff: 0 Revised on Nov. 24, 2025 Ethnic diversity index for non-academic staff: 0 Revised on Nov. 24, 2025	This is a diversity INDEX (a single 0-1 concentration score), not the percentage breakdown GRI 405-1-b asks for. It shows how mixed the group is, not what share each group holds. No STARS credit collects employee age at all, so GRI 405-1's age-group split (under 30 / 30-50 / over 50) is unanswerable for every employee category. 405-1-a is still not answered: STARS PA-3 records which constituencies are represented on the highest decision-making body, never what percentage of that body they make up. DATA QUALITY: TU Dublin's value is the string '0 Revised on Nov. 24, 2025' — annotation text concatenated onto the figure — so the field is typed <code>text</code> , not <code>number</code> , and will not parse. Cork and Berkeley are clean. STARS reports one combined figure for 'women or other marginalized gender identities' rather than a percentage per gender, so the split GRI asks for is two buckets, not three.
405-2 Ratio of basic salary and remuneration of women to men	Not reported	No STARS data exists for this disclosure.	STARS FIELDS: nothing. PA-13 covers living-wage coverage and wage floors, not a gender pay ratio — despite the credit being named 'Pay Equity'. BUT the evidence documents linked from STARS answers partially close this: UCC publishes V3EDIGenderPayGapReport2025.pdf and TU Dublin Gender-Pay-Gap-Report-2023-FINALv1.pdf, both stating a mean gender pay gap. Berkeley links no equivalent. NOT a substitute for 405-2: GRI wants the ratio of basic salary and remuneration of women to men PER EMPLOYEE CATEGORY and per significant location; these reports give one organisation-wide percentage. Reportable as context with the source named, for 2 of 3 institutions, and it must be read out of the PDF by a human — it is not in any structured field, so it cannot go through the Jinja2 number path.

Verifying this report

Every figure above is recorded in `report/output/index_provenance.csv` with the exact STARS credit and field it came from, so any number can be traced to a row of the source dataset without trusting the generator. `tests/test_content_index.py` re-derives them independently of the code that produced them.
