

Sustainability Report — University of California, Berkeley

Prepared **with reference to** the GRI Standards · compiled 2026-09-06

About this report. It is generated from University of California, Berkeley's public AASHE STARS 3.0 submission, mapped onto the GRI Standards. It covers 78 GRI disclosures across 13 standards. Where a disclosure cannot be answered from STARS data, the report says so and why, rather than omitting the question. **How the figures got here — and why they can be trusted.** Every number in this document was copied by code from the extracted STARS dataset. The language model that wrote the prose was never shown a figure: it wrote named placeholders and the values were substituted afterwards, so it could not alter, round or invent one. After substitution the finished text is scanned, and the build fails if any number in it cannot be traced back to the source data. The model chose the sentences; it did not choose the numbers. **What that guarantee does not cover.** It applies to figures. Qualitative statements are drawn from the institution's own STARS narrative answers, but no mechanical check confirms that a sentence describing them is faithful. **"With reference to", not "in accordance with".** GRI reserves **in accordance** for reports answering every Universal Disclosure plus all disclosures for each material topic. This report does not, so it makes the weaker and correct claim. **Source and attribution.** [University of California, Berkeley STARS Report](<https://reports.aashe.org/institutions/university-of-california-berkeley-ca/report/2025-02-19/>), AASHE. STARS data is publicly accessible and used here with attribution to AASHE; it is not openly licensed.

The organisation and its reporting

Organisational details and reporting boundary

The University of California, Berkeley is a public higher education institution. Under GRI 2-2, the institutional boundary for this report is determined by operational control. This boundary encompasses the main campus in the City of Berkeley, the adjacent Hill campus, the Richmond Field Station, additional university-operated research stations and reserves, and campus-owned buildings across various locations. Operational activities and facilities within this physical footprint include campus museums (GRI 2-6).

The reporting framework records institutional boundaries as descriptive narratives rather than structured entity schedules. Because reporting boundaries differ across higher education institutions—with some institutions excluding auxiliary or residential companies while UC Berkeley includes all facilities under operational control—comparative figures normalised by population or floor space reflect differing operational scopes rather than performance disparities alone.

Reporting period and coordination

Data collation was coordinated by the Sustainability Data and Program Manager and a Postdoctoral Fellow within the Office of Sustainability (GRI 2-3). Performance data for Scope 1 and Scope 2 greenhouse gas emissions corresponds to the performance year 2023.

STARS submissions operate as independent snapshots with divergent evaluation periods across individual credit areas rather than a single unified reporting year. This report cannot evidence restatements of information from prior reporting cycles, as the source framework does not track historical adjustments (GRI 2-4).

External assurance and reporting limitations

No independent audits or external assurance processes were used in the preparation of this report (GRI 2-5).

Certain standard disclosures under the GRI framework are outside the scope of the underlying data collection. STARS metadata does not capture the institution's formal legal registration details, headquarters location, or countries of operation (GRI 2-1). The source framework records personnel names and roles without designated contact channels, publication dates, or reporting frequency (GRI 2-3). Furthermore, the source framework does not capture external assurance standards or provider relationships (GRI 2-5), nor does it evaluate broader supply chains, specific market destinations, or products and services beyond physical campus features (GRI 2-6).

Activities and workers

Workforce scale and profile

Under GRI 2-7, the institution records its staffing levels using full-time equivalent metrics. The overall full-time equivalent of employees at the University of California, Berkeley is 13,678.

Reporting limitations and omissions

The source framework presents several structural limitations regarding workforce composition. The reported metric reflects full-time equivalent staffing rather than a distinct employee headcount. Furthermore, STARS collects a single aggregate figure, meaning this report cannot provide the detailed breakdowns required by Disclosure 2-7 concerning employment contract type (permanent or temporary), employment schedule (full-time or part-time), gender, or geographic region.

Regarding Disclosure 2-8, which covers workers who are not direct employees but whose labour is controlled by the institution, STARS does not track individual non-employee worker numbers or their specific contractual arrangements. Although institutional records account for contracting organisations, they do not document the number of

individual workers engaged under these contracts, and this report cannot evidence that data.

Material topics

Determination of Reporting Topics

The topics addressed in this report are derived directly from the credit framework of the Sustainability Tracking, Assessment & Rating System (STARS), administered by the Association for the Advancement of Sustainability in Higher Education (AASHE). Because STARS applies a standardised credit set designed for the higher-education sector as a whole, the reporting boundaries reflect these predetermined categories rather than an institution-specific materiality assessment.

The University of California, Berkeley maintains formal, measurable sustainability objectives across the core operational and functional areas established within the STARS framework: - Campus operations; - Teaching, learning, and research; - Racial equity and social justice; - Administration and finance; and - Campus and community engagement.

Management of Sustainability Topics

Sustainability management across these operational and academic areas is governed through both systemwide policies and campus-level initiatives. UC Berkeley operates under the University of California Sustainable Practices Policy, which establishes systemwide environmental targets encompassing greenhouse gas emissions reductions, clean energy, and waste diversion. At the campus level, the university implements its own Sustainability Plan, including dedicated climate and resiliency strategies aimed at transitioning to a clean energy and zero-carbon campus.

Institution-wide coordination is led by the UC Berkeley Office of Sustainability, which sets strategic sustainability objectives, coordinates project implementation, and engages the campus community. These efforts include advancing electrified campus energy infrastructure, fostering sustainable operational practices, and integrating sustainability principles across university administration and academic programmes. External commitments and published institutional plans further formalise these operational targets.

Reporting Limitations

In relation to GRI 3-1, this report cannot evidence an institutional process for determining material topics. STARS does not request information regarding how an organisation identifies, prioritises, and selects specific impacts for reporting, and this silence reflects the structure of the data collection framework rather than the presence or absence of internal institutional processes.

In relation to GRI 3-2 and GRI 3-3, the standard areas reported indicate where the university has adopted measurable sustainability objectives rather than the results of a

bespoke impact materiality evaluation. Furthermore, the available information reflects broad institutional management practices rather than topic-by-topic management disclosures, and the source data does not disaggregate actions between preventative measures and remediation, nor does it detail specific value-chain impacts or past evaluation lessons.

Governance

The highest decision-making body of the University of California, Berkeley, includes representatives from the academic staff, non-managerial staff, and the student body. Faculty participation in governance is primarily facilitated through the Berkeley Division of the Academic Senate. This body serves as a mechanism for shared governance, as established by the Board of Regents, and enables academic staff to participate in university management through elections, representative councils, and various committees.

Delegation of Responsibility

Responsibility for the management of sustainability impacts is delegated to specialized officers and departments. The Office of Sustainability is led by the Chief Sustainability and Carbon Solutions Officer, who is responsible for coordinating sustainability efforts across the institution. This role involves collaboration with diverse campus constituencies to develop strategies for reducing greenhouse gas emissions, including Scope 1, Scope 2, and Scope 3 emissions, and enhancing sustainable purchasing practices. Additional sustainability officers are located within the Haas School of Business and the Student Environmental Resource Center to support these objectives.

Role in Sustainability Reporting

Regarding Disclosure 2-14, the institution submitted an executive cover letter as part of its sustainability reporting process. However, this report cannot evidence whether the highest governance body formally reviews and approves the sustainability report or the identified material topics, as the source material focuses on executive-level endorsement rather than board-level approval processes.

Reporting Limitations and Omissions

The available data contains several limitations regarding governance. While representation of various constituencies is confirmed under Disclosure 2-9, the source does not provide the specific numeric composition, tenure, or demographic diversity of the governing body. Furthermore, the reporting lines and the frequency with which sustainability officers report to the highest governance body are not recorded.

This report does not contain information regarding the nomination and selection processes for the highest governance body (Disclosure 2-10) or the identity and functions of its chair (Disclosure 2-11). The specific role of the governing body in overseeing the

management of impacts (Disclosure 2-12) and the processes for managing conflicts of interest (Disclosure 2-15) are not reported. Additionally, the source does not provide data on the communication of critical concerns (Disclosure 2-16), the measures taken to advance the collective knowledge of the governing body (Disclosure 2-17), or the evaluation of its performance (Disclosure 2-18). Policies and processes regarding remuneration (Disclosure 2-19 and Disclosure 2-20) and the annual total compensation ratio (Disclosure 2-21) are also not disclosed.

Strategy, policies and practices

The University of California, Berkeley, articulates its sustainability vision through several primary documents, including the UC Berkeley Climate Action Plan and the UC Berkeley Sustainability Plan. These plans establish strategies for reducing greenhouse gas emissions and meeting climate goals through energy efficiency, the promotion of renewable energy, and the support of sustainable transportation options. The institution is a signatory to the Second Nature Climate Leadership Commitments, specifically the Carbon Commitment, which reinforces its pledge to reduce carbon emissions and enhance resilience against climate change.

Policy Commitments and Implementation

The university maintains public commitments to sustainability that include formal reporting requirements. It participates in the Sustainability Tracking, Assessment & Rating System (STARS) to share performance data transparently and reports verified annual greenhouse gas inventories to The Climate Registry (TCR). To embed these standards within its operations, the university provides a published code of conduct for suppliers that outlines social and environmental expectations.

The UC Berkeley Office of Sustainability provides campus leadership by setting goals and accelerating their achievement through project implementation and community engagement. Recent accomplishments include attaining a leading position in international sustainability rankings and supporting the development of a clean electrified campus energy system. To further integrate these commitments, the university provides sustainability-focused training opportunities to non-academic staff on at least an annual basis.

Ethics and Grievance Mechanisms

The university provides several mechanisms for seeking advice and raising concerns regarding ethical conduct and employee rights. The University of California Statement of Ethical Values and Standards of Ethical Conduct serves as a comprehensive code for the campus, emphasizing integrity, respect, and accountability. Human Resources policies further outline rights related to fair treatment, anti-discrimination, and work-life balance.

Information regarding grievance resolution and whistleblower protections is published and accessible to all employees. These measures are designed to protect employee rights and provide transparent procedures for addressing concerns.

Limitations and Omissions

This report cannot evidence the specific authorship of the sustainability vision as required by Disclosure 2-22, as the source material does not attribute the statement to a specific senior executive or governance body. While sustainability commitments are documented, they do not specifically confirm adherence to the UN Guiding Principles or human rights due diligence as defined in Disclosure 2-23. Regarding Disclosure 2-24, the available information describes general outcomes and training for non-academic staff rather than the specific internal allocation of responsibility or the integration of commitments into business relationships.

Mechanisms for grievance and whistleblowing under Disclosure 2-25 and Disclosure 2-26 are reported as available to employees, but this report cannot evidence their operational details, effectiveness, or availability to external stakeholders and those in business relationships. Furthermore, STARS data is restricted to commitments with reporting requirements and does not collect information on general association memberships as required by Disclosure 2-28.

Disclosure 2-27, concerning compliance with laws and regulations, is not reported. STARS does not collect data regarding significant instances of non-compliance, fines, or the monetary value of legal actions.

Stakeholder engagement

The University of California, Berkeley, employs several formal mechanisms to ensure that students, staff, and the local community are consulted on institutional decisions and policies. These standing bodies and roles provide structured pathways for stakeholder perspectives to influence governance at both the campus and systemwide levels.

Student and Staff Consultation

Student representation is integrated into the highest level of university governance through the Board of Regents. A student is appointed as a Student Regent, serving as a voting member of the Board and its committees. This position is preceded by a year as a Student Regent-designate, a non-voting role that allows the individual to prepare for their term. The Student Regent is responsible for advocating for student concerns and ensuring that student perspectives are considered during the decision-making process.

For academic staff, the Berkeley Academic Senate serves as the primary body for consultation. This standing body allows faculty to participate in the formulation of institutional plans and policies, maintaining a formal channel of communication between the academic staff and the university administration.

Community Engagement

The university facilitates engagement with the local community through the Government and Community Relations unit of the Chancellor's Office. A central mechanism for this consultation is the Special City/UC/Student Committee, which includes representatives from the Berkeley City Council, undergraduate and graduate student governments, and campus administrators. This committee meets regularly to discuss issues of mutual concern, including university capital projects and land-use planning.

Beyond these government-linked committees, the institution maintains ongoing bodies through which local community-based organisations not affiliated with the university can participate in governance. This ensures that external stakeholders have a democratic avenue to influence university decisions that affect the surrounding area.

Operational and Task-Specific Consultation

Stakeholder engagement also occurs through thematic initiatives and task forces. For example, the university has conducted focus groups with front-line herbicide applicators to gather direct feedback on safety considerations and pesticide management. Similarly, the university's waste management units collaborate with event planners and caterers to implement zero waste strategies for major campus events, ensuring that operational goals are met through active engagement with those responsible for their execution.

Limitations of Disclosure

This report cannot evidence the specific methods used to identify stakeholders or the processes used to ensure that engagement is meaningful, as the STARS framework does not collect this information. While students, staff, and the local community are covered, this report does not include data regarding the engagement of suppliers, customers, or vulnerable groups. Regarding Disclosure 2-30, the institution does not report the percentage of total employees covered by collective bargaining agreements, as the source material focuses on contractor wage levels and the publication of freedom-of-association information rather than internal bargaining coverage.

Environmental performance

Energy consumption and intensity

Total annual energy consumption within the institution was 78,414.00 Megawatt-hours. Electricity consumption accounted for 47,744.70 Megawatt-hours, whilst total stationary fuel consumption was recorded at 30,414 Megawatt-hours. Within stationary fuels, natural gas accounted for 30,014 Megawatt-hours, propane and liquefied petroleum gas accounted for 0 Megawatt-hours, heating oil stood at 400 Megawatt-hours, and coal or coke was 0 Megawatt-hours. Renewable stationary fuels accounted for 0 Megawatt-hours, total annual renewable energy consumption stood at 18,173 Megawatt-hours, and

exported on-site renewable electricity was 0 Megawatt-hours. Consumption of heating and cooling from off-site sources was 255.30 Megawatt-hours.

Normalised against operational activity, the institution's annual energy intensity was 1,346.02 Kilowatt-hours and 52.17 Kilowatt-hours per square meter.

In relation to Disclosure 302-1, data is reported in megawatt-hours as collected under the STARS reporting tool rather than in joules as requested by the GRI standard.

Furthermore, the institution's energy data contains a notable boundary omission: the reported stationary fuel consumption does not account for the primary fuel combusted in the campus cogeneration plant, even though the resulting emissions are captured within the greenhouse gas inventory. Because the cogeneration plant is omitted from the energy accounting, the reported total energy consumption and derived intensity figures are incomplete, and the exact magnitude of the omission cannot be determined from the available data.

Greenhouse gas emissions

Under GRI 305, direct Scope 1 greenhouse gas emissions comprised 134,957 Metric tons of CO₂ equivalent from stationary combustion, 1,676 Metric tons of CO₂ equivalent from mobile combustion, and 76 Metric tons of CO₂ equivalent from fugitive sources.

Greenhouse gas emissions from biogenic sources were 0 Metric tons of CO₂ equivalent.

For market-based indirect Scope 2 emissions under Disclosure 305-2, emissions from off-site electricity generation were 1,256 Metric tons of CO₂ equivalent, and emissions associated with imported heating and cooling were 0 Metric tons of CO₂ equivalent.

Location-based Scope 2 emissions are not reported.

Other indirect Scope 3 emissions under Disclosure 305-3 comprised 19,913 Metric tons of CO₂ equivalent from business travel, 12,836 Metric tons of CO₂ equivalent from employee and student commuting, 728 Metric tons of CO₂ equivalent from operational solid waste, and 22 Metric tons of CO₂ equivalent from fuel- and energy-related activities not included in Scope 1 or Scope 2. The institution does not report Scope 3 emissions from purchased goods and services or capital goods.

The institution's operational emissions intensity under Disclosure 305-4 was 2,368.25 Kilograms of CO₂ equivalent and 91.79 Kilograms per square meter.

Progress against historical performance under Disclosure 305-5 is measured against a baseline adopted in 2019, which represented the final business-as-usual reporting period prior to pandemic disruption. Combined baseline Scope 1 and Scope 2 emissions stood at 147,623 Metric tons of CO₂ equivalent. Current adjusted net Scope 1 and Scope 2 emissions were 133,106.95 Metric tons of CO₂ equivalent, representing a reduction of 9.83% from the baseline. This reduction figure is calculated net of 4,858 Metric tons of CO₂ equivalent in third-party certified carbon offsets, creating a distinction between net claimed performance and gross operational emissions reductions.

Water stewardship

Total water withdrawal under Disclosure 303-3 was 2,092,006 Cubic meters. All abstracted water was third-party potable water from off-site municipal sources, recorded at 2,092,006 Cubic meters. Water withdrawal from on-site potable sources was 0 Cubic meters. Data is collected in cubic metres rather than megalitres.

Regarding Disclosure 303-1, the institution's main campus is located in a catchment evaluated as having a high level of physical water quantity risk. The university harvests rainwater on-site for storage and reuse, though STARS does not record the total volume harvested or details of water discharge quality.

Waste management and circularity

Operational non-hazardous waste generation under Disclosure 306-3 was 7,732.13 Metric tons, whilst construction and demolition waste generation totalled 4,753.09 Metric tons.

Under Disclosure 306-4, non-hazardous waste diverted from disposal was 4,254.13 Metric tons. Of this diverted non-hazardous stream, 1,576 Metric tons was recycled, 2,554 Metric tons was composted, and 124.13 Metric tons was prepared for reuse. Diverted construction and demolition waste totalled 3,452.02 Metric tons, consisting of 2,858.23 Metric tons recycled and 593.79 Metric tons reused.

Under Disclosure 306-5, non-hazardous waste directed to landfill or incineration was 3,478 Metric tons, and construction and demolition waste disposed of was 1,301.07 Metric tons.

Circular economy and waste minimization programmes include an institutional surplus property programme for redistributing university equipment, a donation programme for personal items, policies eliminating designated single-use disposable plastics, and comprehensive collection for industrial composting. While a hazardous materials management protocol is maintained to minimise hazardous chemical use, STARS does not collect weight data for hazardous waste streams.

Supplier environmental screening

Under Disclosure 308-1, the university includes sustainability considerations in 100% of bid solicitations. The institution maintains a supplier code of conduct containing environmental performance standards that exceed regulatory minimums. The source framework does not track the specific number or proportion of new suppliers screened against environmental criteria.

Omissions and data limitations

STARS does not collect several metrics required by the GRI Standards. In materials management, GRI 301-1, GRI 301-2, and GRI 301-3 are not applicable because higher education institutions do not produce physical manufactured goods. For energy and air emissions, energy consumption outside the organization (GRI 302-2), energy reduction

quantities in joules (GRI 302-4), energy reductions in products (GRI 302-5), ozone-depleting substances (GRI 305-6), and significant air emissions such as nitrogen oxides and sulfur oxides (GRI 305-7) are not collected. For water and waste, water discharge impacts (GRI 303-2), process-level waste impact descriptions (GRI 306-1), and quantitative hazardous waste weights are unavailable. Supplier-level screening outcomes and corrective actions (GRI 308-2) are also not collected. Scope 1 process emissions and annual total summaries without category divisions were not reported in the source return.

Social and economic performance

Pay and Remuneration

The institution reports a living wage of 39.62. The percentage of employees receiving remuneration equivalent to at least this living wage is 96.20%. For regular permanent employees, the wage floor is 22.54. Regarding student employment, the local hourly minimum wage is 16.99.

This report partially satisfies Disclosure 202-1. The ratio of the standard entry-level wage to the local minimum wage is derivable from the reported wage floor and the student minimum wage, though the latter is scoped to student workers rather than the general workforce. Disclosure 202-1 further requires this ratio to be reported by gender, which is not collected by the source framework.

Employment Conditions

The university provides various leave options for employees. Eligibility for paid all-gender family or medical leave stands at 100%. Paid maternity leave is available for a period of 12 weeks. Eligibility for leave under family and medical leave regulations generally requires a cumulative year of service and a minimum hourly threshold worked during the preceding year. Pregnancy disability leave is available to employees disabled by pregnancy regardless of tenure.

Regarding Disclosure 401-2, the source provides an institution-wide eligibility rate but does not provide the specific comparison between full-time and part-time or temporary employees required by the standard. For Disclosure 401-3, the report describes maternity leave policies but does not provide the headcounts, return-to-work rates, or retention rates required by the GRI standard.

Occupational Health and Safety

The institution maintains an institution-wide health and safety committee and a network of committees that facilitate consultation between workers and management on workplace safety policies. Physical and behavioural health services are made available to employees, alongside free or reduced-cost fitness activities and spiritual or contemplative

activities. The university also enforces a campus-wide prohibition on smoking and tobacco use.

This report cannot evidence the specific management system details required by Disclosure 403-1, such as whether the system is legally required or which specific standards it follows. While general health services are reported, they are not identified as occupational health services under Disclosure 403-3, which focuses on hazard identification and data confidentiality. Furthermore, the source does not record the meeting frequency or decision-making authority of safety committees as required by Disclosure 403-4.

Workforce Diversity

Diversity is monitored across different employee categories using an ethnic diversity index, which measures group concentration on a specific scale. The index is 0.51 for executive staff, 0.50 for academic staff, and 0.69 for non-academic staff.

Gender representation is reported as a combined percentage for women and other marginalised gender identities. This figure is 50% for executive staff, 36.70% for academic staff, and 56.50% for non-academic staff.

In relation to Disclosure 405-1, the ethnic diversity index provides a measure of group mixture rather than the specific percentage breakdown by group required by the standard. Gender is reported in two categories rather than the three required by GRI. This report cannot provide the age-group breakdown for any employee category, as the source framework does not collect employee age data.

Limitations and Omissions

The following disclosures are not reported as the source material does not collect the necessary data: GRI 202-2 regarding local hiring of senior management; GRI 204-1 regarding local supplier spending; GRI 401-1 regarding employee hires and turnover; and GRI 405-2 regarding the remuneration ratio of women to men.

In the area of occupational health and safety, several disclosures are unaddressed by the source framework. This includes GRI 403-2 on hazard identification and incident investigation, GRI 403-5 on safety training, GRI 403-7 on business relationships, and GRI 403-8 regarding the number of workers covered by a formal management system. Data on work-related injuries and ill health required by Disclosure 403-9 and Disclosure 403-10 are also absent.

GRI content index

Reported	Partially reported	Not reported	Not assessed
26	14	38	0

“With reference to”, not “in accordance with.” GRI reserves in accordance for reports answering every Universal Disclosure (GRI 2) plus all disclosures for each material topic. This report does not, so it uses the weaker and correct claim.

GRI 2: General Disclosures 2021

Disclosure	Status	Value / reason	Notes
2-1 Organizational details	Reported	Institutional control: Public	GRI 2-1 also requires the legal name, the location of headquarters and the countries of operation. STARS carries none of these as fields — they are report metadata, not credit data.
2-2 Entities included in the organization’s sustainability reporting	Reported	Narrative outlining the institutional boundary used to complete this report: The institutional boundary used in this report includes those for operational purposes ...	GRI 2-2-a, the entities included in the report. STARS collects this as a free-text boundary narrative, so it answers the disclosure but is not structured as GRI's list of entities. ▲ THE THREE SUBMISSIONS DO NOT SHARE A REPORTING BOUNDARY , so figures normalised per person or per unit of area are not like-for-like across them. Cork's boundary narrative excludes its subsidiary companies by name — Campus Accommodation, the Mardyke Arena, the Student Centre and the Irish Management Institute — and excludes rented multi-tenant buildings; Berkeley's covers everything under its operational control, residences and grounds included. This biases Cork's per-person figures DOWNWARD : students living in Campus Accommodation still count in its full-time-equivalent denominator while their residential consumption falls outside the numerator. Per-area figures are less affected, since the excluded buildings are missing from both halves. Where such a figure is cited comparatively, name the boundary difference; never present the gap as performance alone.
2-3 Reporting period, frequency and contact point	Partially reported	Performance year for scope 1 and 2 GHG emissions: 2023 List of personnel who led the reporting process: Marina Zdobnova, Sustainability Data and Program Manager, Office of Sustainability Ashl...	STARS has no single reporting period, and the per-credit years diverge inside one submission: Cork's credits run from 2023 (construction waste) to 2025 (living wage, investment), Berkeley's from 2023 to 2024. Only TU Dublin is uniform, at 2023. Any single period stated for a GRI report built on this data would be wrong for some of its figures. GRI 2-3 also requires the reporting frequency, the publication date and a contact point; STARS collects none of these. Named preparers are not a designated contact point: STARS records names and roles without contact details, and does not say who should receive enquiries.

Disclosure	Status	Value / reason	Notes
2-4 Restatements of information	Not reported	No STARS data exists for this disclosure.	STARS v2.2 and earlier scored Operations credits against the institution's own baseline and v3.0 scores against a peer group, so cross-version figures are not comparable in the first place — see CLAUDE.md 6.4.
2-5 External assurance	Reported	Were any independent audits or external assurance processes used in the preparation of this report?: No	GRI 2-5 additionally requires the assurance standard used, the level of assurance obtained, the limitations of the process and the relationship with the assurance provider. STARS captures none of these; the free-text field is optional and unstructured. Only populated where the institution answered yes to the assurance question, so it is absent for most submissions. Not populated by this institution: PRE-4 / Narrative outlining the independent audits or external assurance processes used in the preparation of this report.
2-6 Activities, value chain and other business relationships	Partially reported	Which of the following features are included within the institutional boundary?: Museum	GRI 2-6 asks for the sectors the organization is active in, its value chain, its products and services and the markets served. A list of campus features covers only the activities, and only those with a physical footprint.
2-7 Employees	Partially reported	Full-time equivalent of employees: 13,678	FTE is not a headcount: two half-time staff count as one. GRI 2-7 further requires the breakdown by employment contract (permanent / temporary), by employment type (full- / part-time), by gender and by region. STARS collects a single undifferentiated figure.
2-8 Workers who are not employees	Not reported	No STARS data exists for this disclosure.	
2-9 Governance structure and composition	Reported	Are one or more academic staff representatives included as members of the institution's highest decision-making body?: Yes Are one or more staff members representing non-managerial workers included as members of the institution's highest decision-making body?: Yes Are one or more student representatives included as members of the institution's highest decision-making body?: Yes Narrative and/or website URL outlining academic staff representation on the institution's highest decision-making body: UC Berkeley has ongoing bodies through which academic staff can democratically particip...	GRI 2-9 also requires the number of executive and non-executive members, their independence, tenure, other significant positions held, and composition by gender and under-represented social group. STARS records only whether each constituency is represented. See the caveat on the academic-staff row: representation is recorded, composition is not. See the caveat on the academic-staff row. Free text of variable depth; it is not a substitute for the numeric composition GRI 2-9-c requires.

Disclosure	Status	Value / reason	Notes
2-10 Nomination and selection of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-11 Chair of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-12 Role of the highest governance body in overseeing the management of impacts	Not reported	No STARS data exists for this disclosure.	
2-13 Delegation of responsibility for managing impacts	Reported	Does the institution have one or more sustainability officers?: Yes Is at least one of the institution's sustainability committees, officers, or offices charged with coordinating various campus constituencies in the advancement of sustainability across the entire institution?: Yes Narrative and/or website URL providing an overview of the institution's sustainability officers: UC Berkeley's Office of Sustainability is led by a dedicated team committed to advancing...	GRI 2-13-b also requires whether and how often those executives report to the highest governance body. STARS does not ask. See the caveat on the sustainability-officer row. Free text; the reporting line to the highest governance body is not consistently stated.
2-14 Role of the highest governance body in sustainability reporting	Partially reported	Executive cover letter: STARS_3.0_Executive_letter.pdf	Endorsement by a senior executive is not review and approval by the highest governance body, and STARS records neither who approved the content nor whether material topics were reviewed. The field value is an attachment filename, so the letter's text is not in the dataset.
2-15 Conflicts of interest	Not reported	No STARS data exists for this disclosure.	
2-16 Communication of critical concerns	Not reported	No STARS data exists for this disclosure.	
2-17 Collective knowledge of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-18 Evaluation of the performance of the highest governance body	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-19 Remuneration policies	Not reported	No STARS data exists for this disclosure.	
2-20 Process to determine remuneration	Not reported	No STARS data exists for this disclosure.	
2-21 Annual total compensation ratio	Not reported	Mapped to STARS, but this institution left every mapped field blank.	The denominator differs and the difference is large. GRI 2-21 divides the highest-paid individual by the MEDIAN of all other employees; STARS divides the highest-paid senior administrator by the LOWEST-paid full-time employee. The STARS figure is therefore a top-to-bottom spread, not a top-to-typical ratio, and is not comparable with any GRI 2-21 figure published elsewhere. IL-62 is also an Innovation & Leadership bonus credit, so it is optional: only TU Dublin reports it (8.08); Berkeley and Cork leave it blank.
2-22 Statement on sustainable development strategy	Partially reported	Narrative detailing the institution's guiding vision or goals for sustainability and the plan(s) in which they are published: UC Berkeley Climate Action Plan: UC Berkeley has a published Climate Action Plan that d...	GRI 2-22 requires the statement to come from the highest governance body or the most senior executive. STARS records the institution's published vision without attributing it to a named signatory, so the authorship the disclosure turns on is absent.
2-23 Policy commitments	Reported	Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: STARS Reporting through AASHE: UC Berkeley is a participant in the Sustainability Track...	GRI 2-23 specifically requires commitments to respect human rights, to the UN Guiding Principles and to due diligence. A sustainability commitment is broader and does not imply any of these. STARS asks only for commitments carrying a reporting requirement, so commitments without one are out of scope of the field.

Disclosure	Status	Value / reason	Notes
2-24 Embedding policy commitments	Reported	Does the institution have a published code of conduct to guide suppliers on the institution's social and environmental expectations for them?: Yes Does the institution make available sustainability-focused training opportunities to non-academic staff on at least an annual basis?: Yes Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: The UC Berkeley Office of Sustainability provides campus leadership by setting ambitious...	GRI 2-24 also requires how responsibility is allocated internally and how the commitments are embedded in strategies and procedures. STARS asks about non-academic staff only, and about sustainability training generally rather than training on the specific commitments. It describes outcomes, not the allocation of responsibility, the integration into procedures, or the handling of commitments through business relationships that GRI 2-24-a enumerates.
2-25 Processes to remediate negative impacts	Partially reported	Does the institution publish information on grievance resolution in a format that is accessible to all employees?: Yes	STARS records only that the information is published — not how the mechanism operates, who may use it, or its effectiveness — and covers employees only, where GRI 2-25 covers all affected stakeholders.
2-26 Mechanisms for seeking advice and raising concerns	Reported	Does the institution publish information on whistleblower protections in a format that is accessible to all employees?: Yes Narrative and/or website URL providing an overview of the institution's published measures to protect employee rights: UC Berkeley Human Resources Policies: UC Berkeley has a dedicated section on its Human ...	STARS records publication, not a description of how the mechanism operates, and covers employees only. GRI 2-26 extends to all individuals, including those in business relationships. Employees only; see the caveat on the whistleblower row.
2-27 Compliance with laws and regulations	Not reported	No STARS data exists for this disclosure.	
2-28 Membership associations	Partially reported	Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: STARS Reporting through AASHE: UC Berkeley is a participant in the Sustainability Track...	Signing a charter is not membership of an association, and STARS restricts the field to commitments carrying a reporting requirement. The institution's association memberships are not collected as such.

Disclosure	Status	Value / reason	Notes
2-29 Approach to stakeholder engagement	Reported	Description of other mechanisms used to consult students on institutional decisions, plans, or policies: Each year, one UC student is appointed as a Student Regent with voting rights, represen... Description of other mechanisms used to consult academic staff on institutional decisions, plans, or policies: Berkeley Academic Senate: https://academic-senate.berkeley.edu/ Narrative and/or website URL outlining the ad hoc mechanisms used during the previous three years to consult local community members on institutional decisions, plans, or policies: The Government and Community Relations unit of the Chancellor's Office partners with th... Does the institution have one or more ongoing bodies through which local community-based organizations not affiliated with the institution can democratically participate in its governance?: Yes	GRI 2-29 also asks how stakeholders are identified and how the organization ensures the engagement is meaningful. STARS asks about four fixed constituencies and does not cover suppliers, customers or vulnerable groups. See the caveat on the student-consultation row.
2-30 Collective bargaining agreements	Not reported	No STARS data exists for this disclosure.	

GRI 3: Material Topics 2021

Disclosure	Status	Value / reason	Notes
3-1 Process to determine material topics	Not reported	No STARS data exists for this disclosure.	A structural difference between the two FRAMEWORKS, not missing data and not a criticism of the institution. GRI assumes the organisation identifies and prioritises its own impacts; STARS assumes AASHE settled that for the higher-education sector and asks the institution to answer a fixed credit set. △ DO NOT WRITE THAT THE INSTITUTION DID NOT CONDUCT, DID NOT RUN, OR DOES NOT CARRY OUT A MATERIALITY ASSESSMENT. Nothing here supports it; STARS never asked, so a university that ran one has nowhere to say so. The defensible statement is that this report cannot evidence such a process, and that the topics it covers are AASHE's sector-level determination rather than an institution-specific one. PA-2 records a climate-vulnerability assessment and PA-3 records stakeholder consultation, but neither is a materiality process and neither should be presented as one.

Disclosure	Status	Value / reason	Notes
3-2 List of material topics	Partially reported	Has the institution adopted one or more measurable sustainability objectives that address campus operations?: Yes Has the institution adopted one or more measurable sustainability objectives that address teaching, learning, and/or research?: Yes Has the institution adopted one or more measurable sustainability objectives that address racial equity and/or social justice?: Yes Has the institution adopted one or more measurable sustainability objectives that address administration and/or finance?: Yes Has the institution adopted one or more measurable sustainability objectives that address campus and/or community engagement?: Yes	NOT A MATERIALITY DETERMINATION. These five areas are fixed by STARS and identical for every institution, so they say where an institution has set objectives, not which impacts it judged significant and why. GRI 3-2-b also requires changes against the previous reporting period, which a single STARS submission cannot show. Presenting these as material topics would overstate what this dataset establishes: it shows that objectives exist in an area, never how that area was chosen. Whether the institution determined its own topics outside STARS is not recorded here either way, and must not be asserted in either direction. See the campus-operations row: fixed areas, not a materiality determination.
3-3 Management of material topics	Partially reported	Narrative listing the institution's measurable sustainability objectives that address campus operations: UC Berkeley follows the UC systemwide Sustainable Practices Policy . Section III. C. ou... Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: The UC Berkeley Office of Sustainability provides campus leadership by setting ambitiou... Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes	Asked per material topic, and no material-topics list exists (see GRI 3-2) — so these are institution-wide answers to a question GRI asks topic by topic. GRI 3-3 also requires the impacts themselves (3-3-a), whether the organisation is involved through its own activities or its business relationships (3-3-b), and lessons learned (3-3-e-iv). STARS collects none of those. It reports outcomes rather than distinguishing actions that prevent potential harm from actions that remediate actual harm, which is the split GRI 3-3-d asks for.

GRI 202: Market Presence 2016

Disclosure	Status	Value / reason	Notes
202-1 Ratios of standard entry level wage by gender compared to local minimum wage	Reported	Percentage of employees that receive remuneration equivalent to at least a living wage: 96.20 Living wage: 39.62 Wage floor for regular/permanent employees: 22.54 Local hourly minimum wage for students: 16.99	PARTIALLY SATISFIES GRI 202-1, AND THE RATIO IS DERIVABLE. Both terms are in STARS: PA-13's Wage floor for regular/permanent employees is the standard entry-level wage, and PA-9's Local hourly minimum wage for students is the local statutory minimum. Berkeley $22.54/16.99 = 1.33$, Cork $16.40/14.25 = 1.15$, TU Dublin $16.53/12.70 = 1.30$. Δ TWO LIMITS REMAIN. The minimum-wage field sits in a student-employment credit, so it is the minimum applying to student workers rather than one stated for the workforce generally — in all three cases it matches the statutory local minimum, but say which figure is being used. And GRI requires the ratio BY GENDER, which STARS does not collect at any credit; that half is unanswerable, not merely unsupplied. STARS separately benchmarks pay against a LIVING wage, which is a different and higher threshold than the minimum wage and must not be substituted for it. Values are bare numbers with no currency - EUR for the Irish universities, USD for Berkeley - and are not comparable across them without saying so. It lives in PA-9, a student-employment credit, so it is the minimum applying to student workers. In all three cases it matches the local statutory minimum (Berkeley 16.99, the City of Berkeley rate; Cork 14.25; TU Dublin 12.70, Ireland's national minimum), but the scoping should be stated rather than glossed.
202-2 Proportion of senior management hired from the local community	Not reported	No STARS data exists for this disclosure.	No STARS credit collects this.

GRI 204: Procurement Practices 2016

Disclosure	Status	Value / reason	Notes
204-1 Proportion of spending on local suppliers	Not reported	No STARS data exists for this disclosure.	

GRI 301: Materials 2016

Disclosure	Status	Value / reason	Notes
301-1 Materials used by weight or volume	Not reported	No STARS data exists for this disclosure.	This is a sector-fit finding of the same kind as AC-1 and EN-1 on the STARS side: the framework and the institution type do not line up.
301-2 Recycled input materials used	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
301-3 Reclaimed products and their packaging materials	Not reported	No STARS data exists for this disclosure.	

GRI 302: Energy 2016

Disclosure	Status	Value / reason	Notes
302-1 Energy consumption within the organization	Reported	Total annual energy consumption: 78,414.00 Megawatt-hours Total electricity consumption: 47,744.70 Megawatt-hours Total stationary fuel consumption: 30,414 Megawatt-hours Annual renewable energy consumption: 18,173 Megawatt-hours Renewable stationary fuels: 0 Megawatt-hours Total heating and cooling from off-site sources: 255.30 Megawatt-hours On-site renewable electricity exported: 0 Megawatt-hours Natural gas: 30,014 Megawatt-hours Heating oil: 400 Megawatt-hours Coal/coke: 0 Megawatt-hours Propane/LPG: 0 Megawatt-hours	GRI 302-1 expects joules or multiples and requires fuel consumption split into renewable and non-renewable. STARS reports megawatt-hours. Δ DO NOT CONVERT IN PROSE, AND DO NOT STATE THE CONVERSION FACTOR. A conversion factor is a figure, and no figure may enter the narrative that the code did not substitute. Report the STARS value in its own units and name the unit difference in words; if a figure in GRI's units is ever required, derive it in code from the verified value. Δ BERKELEY ONLY, AND IT IS AN INCOMPLETE RETURN RATHER THAN A RESULT. Berkeley's reported stationary fuel consumption is far too small — by a factor of roughly twenty-five — to have produced the stationary combustion emissions it reports in the same submission, and no fuel burns at that intensity. Its own emissions methodology names natural gas from the campus cogeneration plant as a Scope 1 source, while its energy return records no on-site non-renewable electricity at all: the plant is in the emissions inventory and absent from the energy one. State plainly that Berkeley's energy total is incomplete and that the size of the gap cannot be established from this data. Do NOT present Berkeley's energy figures as an efficiency achievement, and do NOT repeat any of this in Cork's or TU Dublin's report — neither shows the mismatch. GRI 302-1-a is fuel consumption from non-renewable sources. This is the STARS total for it, and the figure the cogeneration arithmetic below turns on. SCOPE MISMATCH. GRI 302-1-b is 'Total fuel consumption from renewable sources'. This STARS field also includes renewable ELECTRICITY (Berkeley 18,173 MWh), so it is broader than GRI's line and would overstate renewable fuel. The precise match is 'Renewable stationary fuels' - see the row below, which is ~0 for all three. Use this field only for a general renewables statement, never for GRI 302-1-b. Correct but near-empty: 0.21 MWh for TU Dublin, 0 for Cork and Berkeley. A finding in itself - these universities' renewable energy is almost entirely purchased electricity, not renewable fuel. GRI 302-1-b is therefore honestly reportable as ~zero. GRI 302-1 requires joules; STARS reports MMBtu or MWh, so this value is not in GRI's unit as collected. Zero for all three institutions in the current reporting year, so the mapping is correct but currently carries no signal. GRI 302-1 expects joules; STARS reports MWh. Zero at Cork; a small residual at TU Dublin and Berkeley. Units are MWh, not joules. A reported zero, not missing data. STARS also carries an Other stationary fuels catch-all, also zero everywhere, which is what makes this list of fuel types complete rather than merely partial.

Disclosure	Status	Value / reason	Notes
302-2 Energy consumption outside of the organization	Not reported	No STARS data exists for this disclosure.	
302-3 Energy intensity	Reported	Annual energy consumption per person: 1,346.02 Kilowatt-hours Annual energy consumption per unit of floor area: 52.17 Kilowatt-hours per square meter	GRI 302-3 energy intensity, normalised per person. Δ THE THREE SUBMISSIONS DO NOT SHARE A REPORTING BOUNDARY, so figures normalised per person or per unit of area are not like-for-like across them. Cork's boundary narrative excludes its subsidiary companies by name — Campus Accommodation, the Mardyke Arena, the Student Centre and the Irish Management Institute — and excludes rented multi-tenant buildings; Berkeley's covers everything under its operational control, residences and grounds included. This biases Cork's per-person figures DOWNWARD: students living in Campus Accommodation still count in its full-time-equivalent denominator while their residential consumption falls outside the numerator. Per-area figures are less affected, since the excluded buildings are missing from both halves. Where such a figure is cited comparatively, name the boundary difference; never present the gap as performance alone. Δ BERKELEY ONLY, AND IT IS AN INCOMPLETE RETURN RATHER THAN A RESULT. Berkeley's reported stationary fuel consumption is far too small — by a factor of roughly twenty-five — to have produced the stationary combustion emissions it reports in the same submission, and no fuel burns at that intensity. Its own emissions methodology names natural gas from the campus cogeneration plant as a Scope 1 source, while its energy return records no on-site non-renewable electricity at all: the plant is in the emissions inventory and absent from the energy one. State plainly that Berkeley's energy total is incomplete and that the size of the gap cannot be established from this data. Do NOT present Berkeley's energy figures as an efficiency achievement, and do NOT repeat any of this in Cork's or TU Dublin's report — neither shows the mismatch. GRI 302-3 energy intensity, normalised per unit of floor area.
302-4 Reduction of energy consumption	Not reported	No STARS data exists for this disclosure.	
302-5 Reductions in energy requirements of products and services	Not reported	No STARS data exists for this disclosure.	

GRI 303: Water and Effluents 2018

Disclosure	Status	Value / reason	Notes
303-1 Interactions with water as a shared resource	Reported	Level of physical water quantity risk for the institution's main campus: High Does the institution harvest rainwater on-site for storage and use?: Yes	A risk grade is not the description GRI 303-1 asks for: it says nothing about how water is withdrawn, consumed or discharged, how the impacts were identified, or how the institution works with stakeholders on shared water resources. It also covers the main campus only, where a multi-campus institution has several. Only one of the three institutions quantifies the volume harvested; the other two answer the yes/no only.
303-2 Management of water discharge-related impacts	Not reported	No STARS data exists for this disclosure.	
303-3 Water withdrawal	Reported	Total water withdrawal: 2,092,006 Cubic meters Potable water from off-site sources: 2,092,006 Cubic meters Potable water from on-site sources: 0 Cubic meters	GRI 303-3 requires a breakdown by source AND a separate figure for areas with water stress. STARS collects neither, so 303-3 cannot be fully satisfied from STARS alone. UNITS: GRI 303-3 requires megaliters and STARS reports cubic meters — a thousandfold difference, so the two are never interchangeable. The same mismatch affects GRI 302-1, which wants joules where STARS reports megawatt-hours. △ DO NOT CONVERT IN PROSE, AND DO NOT STATE THE CONVERSION FACTOR. A conversion factor is a figure, and no figure may enter the narrative that the code did not substitute. Report the STARS value in its own units and name the unit difference in words; if a figure in GRI's units is ever required, derive it in code from the verified value. Maps to the specific GRI 303-3-a-v category 'Third-party water'. It is the ONLY withdrawal source these universities have — on-site abstraction is zero for all three — so this equals the total. Zero for all three institutions, which is itself the finding: none of them abstracts its own water. Retained so the GRI 303-3 source breakdown is complete rather than silent.
303-4 Water discharge	Not reported	Assessed: the nearest STARS field (OP-3 / Annual volume of water recovered and/or returned) was reviewed and rejected as an answer to this disclosure.	GRI 303-4 requires discharge by destination, freshwater/other water split, and treatment level. STARS captures none of that. Weak mapping - verify before use.

Disclosure	Status	Value / reason	Notes
303-5 Water consumption	Not reported	Assessed: the nearest STARS field (OP-3 / Annual potable water use) was reviewed and rejected as an answer to this disclosure.	DEFINITIONS DIFFER. GRI 303-5 water consumption = withdrawal minus discharge. STARS 'annual potable water use' is potable supply only and is not computed that way. Do not present this as GRI 303-5 without recomputing.

GRI 305: Emissions 2016

Disclosure	Status	Value / reason	Notes
305-1 Direct (Scope 1) GHG emissions	Reported	Scope 1 GHG emissions from stationary combustion: 134,957 Metric tons of CO2 equivalent Scope 1 GHG emissions from mobile combustion: 1,676 Metric tons of CO2 equivalent Scope 1 GHG fugitive emissions: 76 Metric tons of CO2 equivalent GHG emissions from biogenic sources: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2019 Baseline scope 1 and 2 GHG emissions: 147,623 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: https://sustainability.berkeley.edu/carbon-solutions/greenhouse-gas-inventory 2019 was ... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: UC Berkeley reports on ten emissions sources and analyzes emissions in three different ...	GRI 305-1 additionally requires biogenic CO2 to be reported separately from the gross figure. GRI asks for biogenic CO2 specifically; the STARS field is CO2-equivalent and may not be the same boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-1-e) and the consolidation approach (305-1-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 1 GHG emissions; OP-6 / Scope 1 GHG process emissions.

Disclosure	Status	Value / reason	Notes
305-2 Energy indirect (Scope 2) GHG emissions	Reported	Scope 2 GHG emissions from off-site sources of electricity (market-based): 1,256 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of heating and cooling: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2019 Baseline scope 1 and 2 GHG emissions: 147,623 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: https://sustainability.berkeley.edu/carbon-solutions/greenhouse-gas-inventory 2019 was ... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: UC Berkeley reports on ten emissions sources and analyzes emissions in three different ...	GRI 305-2 requires location-based and, where available, market-based figures reported separately. Do not present a single scope 2 number without saying which method. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-2-e) and the consolidation approach (305-2-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 2 GHG emissions; OP-6 / Scope 2 GHG emissions from off-site sources of electricity (location-based).
305-3 Other indirect (Scope 3) GHG emissions	Reported	Scope 3 GHG emissions from business travel: 19,913 Metric tons of CO2 equivalent Scope 3 GHG emissions from commuting: 12,836 Metric tons of CO2 equivalent Scope 3 GHG emissions from waste generated in operations: 728 Metric tons of CO2 equivalent Scope 3 GHG emissions from fuel- and energy-related activities not included in scope 1 or scope 2: 22 Metric tons of CO2 equivalent	Not populated by this institution: OP-6 / Scope 3 GHG emissions from purchased goods and services; OP-6 / Scope 3 GHG emissions from capital goods.

Disclosure	Status	Value / reason	Notes
305-4 GHG emissions intensity	Reported	Annual scope 1 and 2 GHG emissions per person: 2,368.25 Kilograms of CO2 equivalent Annual scope 1 and 2 GHG emissions per unit of floor area: 91.79 Kilograms per square meter	GRI 305-4 emissions intensity, normalised per person. Δ THE THREE SUBMISSIONS DO NOT SHARE A REPORTING BOUNDARY, so figures normalised per person or per unit of area are not like-for-like across them. Cork's boundary narrative excludes its subsidiary companies by name — Campus Accommodation, the Mardyke Arena, the Student Centre and the Irish Management Institute — and excludes rented multi-tenant buildings; Berkeley's covers everything under its operational control, residences and grounds included. This biases Cork's per-person figures DOWNWARD: students living in Campus Accommodation still count in its full-time-equivalent denominator while their residential consumption falls outside the numerator. Per-area figures are less affected, since the excluded buildings are missing from both halves. Where such a figure is cited comparatively, name the boundary difference; never present the gap as performance alone. GRI 305-4 emissions intensity, normalised per unit of floor area.
305-5 Reduction of GHG emissions	Reported	Percentage reduction in scope 1 and 2 GHG emissions from baseline: 9.83 Baseline scope 1 and 2 GHG emissions: 147,623 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2019 Narrative outlining when and why the GHG emissions baseline was adopted: https://sustainability.berkeley.edu/carbon-solutions/greenhouse-gas-inventory 2019 was ... Adjusted net scope 1 and 2 GHG emissions: 133,106.95 Metric tons of CO2 equivalent Third party certified carbon offsets: 4,858 Metric tons of CO2 equivalent	GRI 305-5 asks for reductions as an ABSOLUTE quantity in metric tons CO2e; STARS gives a percentage. Δ THAT PERCENTAGE IS NET OF PURCHASED OFFSETS. STARS computes it from Adjusted net scope 1 and 2 GHG emissions , not from the gross total printed alongside it, so the two do not reconcile wherever an institution holds offsets: Berkeley's reduction is 6.54% gross and 9.83% net, a third of the headline figure being bought rather than achieved. Cork and TU Dublin agree on both bases only because their offsets are zero. Deriving the absolute reduction as baseline minus current gives the GROSS figure — correct, but not the number STARS prints. Say which basis is being quoted, and report the offsets separately as GRI 305-5's compilation requirement 2.9.5 demands. Derive it; do not present the baseline itself as a reduction. The subtraction is only valid because both figures cover the same combined scope 1 + 2 boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. GRI 305-5-b (gases included) and 305-5-d (which scopes the reductions occurred in) remain unanswered — STARS reports the reduction against the combined scope 1 + 2 total without attributing it to either. GROSS AND NET DIVERGE WHERE OFFSETS EXIST. Berkeley's reduction is 6.54% gross and 9.83% net; Cork's and TU Dublin's are identical either way because they hold no offsets. State which basis is being quoted. Berkeley holds 4,858 tCO2e of third-party certified offsets, which is the entire difference between its gross and adjusted-net reduction — about a third of the headline figure. STARS also reports a Net carbon sinks field which is CAPPED and does NOT equal the deduction actually applied, so do not use it to reconcile the two percentages.

Disclosure	Status	Value / reason	Notes
305-6 Emissions of ozone-depleting substances (ODS)	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no ODS data at any credit. Cannot be reported from this dataset.
305-7 Nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no criteria-air-pollutant data. Cannot be reported from this dataset.

GRI 306: Waste 2020

Disclosure	Status	Value / reason	Notes
306-1 Waste generation and significant waste-related impacts	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
306-2 Management of significant waste-related impacts	Reported	Does the institution have a surplus program through which institution-owned items that are no longer needed are stored for eventual sale, donation, or reuse?: Yes Does the institution have or participate in a reuse program through which employees and/or students can donate personal items for redistribution?: Yes Has the institution eliminated the on-site use of at least one form of single-use disposable plastic?: Yes Does the institution have a hazardous waste management program or protocol that includes measures to minimize or reduce the use of hazardous materials?: Yes Narrative and/or website URL providing an overview of the institution's composting program: UC Berkeley campus has integrated composting into all of our collection systems and its... Does the institution have sufficient data on construction and demolition waste to pursue this indicator?: Yes	GRI 306-3 additionally requires hazardous waste to be quantified separately from non-hazardous. STARS quantifies only non-hazardous and construction-and-demolition waste, so the tonnage is unavailable. It states data sufficiency as a yes/no rather than describing the collection process, and covers construction and demolition waste only.
306-3 Waste generated	Reported	Annual non-hazardous waste generated: 7,732.13 Metric tons Annual construction and demolition waste generated: 4,753.09 Metric tons	NOT EQUIVALENT - a subset. GRI 306-3-a is TOTAL waste generated including hazardous, broken down by composition. STARS reports non-hazardous only and collects no hazardous tonnage at any credit, so 306-3 cannot be fully satisfied. Do not present non-hazardous waste as the organisation's total waste. (Contrast the 306-4 and 306-5 rows, which are component : GRI has explicit non-hazardous lines at 306-4-c and 306-5-c for the STARS figures to answer, whereas 306-3 has no non-hazardous sub-requirement at all — which is why this row is weaker than those two, not equal to them.)

Disclosure	Status	Value / reason	Notes
306-4 Waste diverted from disposal	Reported	Total non-hazardous waste diverted from disposal: 4,254.13 Metric tons Non-hazardous waste recycled: 1,576 Metric tons Non-hazardous waste composted: 2,554 Metric tons Non-hazardous waste prepared for reuse: 124.13 Metric tons Total construction and demolition waste diverted from disposal: 3,452.02 Metric tons Construction and demolition waste recycled: 2,858.23 Metric tons Construction and demolition waste prepared for reuse: 593.79 Metric tons	Exact scope match on GRI 306-4-c, including its split by recovery operation (reuse / recycling / other) from the rows below. GRI 306-4-d additionally wants each operation split on-site vs off-site, which STARS does not collect. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions. Reuse is a higher-value recovery route than recycling under the waste hierarchy, so omitting it understates the quality of diversion as well as the arithmetic. Cork recovers 1,162.73 of 6,837.95 tonnes this way.
306-5 Waste directed to disposal	Reported	Non-hazardous waste disposed of to a landfill or incinerator: 3,478 Metric tons Construction and demolition waste disposed of to a landfill or incinerator: 1,301.07 Metric tons	WEAKER THAN THE 306-4 EQUIVALENT: GRI 306-5-c also requires the total split across four disposal operations — incineration with energy recovery, incineration without, landfilling, other — and STARS merges landfill and incineration into a single figure. The waste-to-energy percentage field would separate incineration with recovery, but only two of the three institutions report it, so the split cannot be derived consistently. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.

GRI 308: Supplier Environmental Assessment 2016

Disclosure	Status	Value / reason	Notes
308-1 New suppliers that were screened using environmental criteria	Partially reported	Does the institution's supplier code of conduct include one or more expectations in regard to environmental impact that exceed or are additional to regulatory compliance?: Yes Percentage of bid solicitations that identify supplier sustainability considerations: 100	GRI 308-1 requires a percentage of new suppliers actually screened. STARS reports the existence of the criteria, not their application to any supplier, so no percentage can be derived. The denominator is bid solicitations, not new suppliers, and one solicitation may attract many suppliers or none. 'Sustainability considerations' is also broader than the environmental criteria GRI 308-1 specifies. The figure is 0 percent at TU Dublin, so a low value here should not be read as a screening failure without checking the product-specification field alongside it.
308-2 Negative environmental impacts in the supply chain and actions taken	Not reported	No STARS data exists for this disclosure.	

GRI 401: Employment 2016

Disclosure	Status	Value / reason	Notes
401-1 New employee hires and employee turnover	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no hiring or turnover figures.
401-2 Benefits provided to full-time employees that are not provided to temporary or part-time employees	Partially reported	Percentage of employees eligible for paid all-gender family/medical leave: 100	GRI 401-2 turns on the contrast between full-time employees and temporary or part-time employees, and asks for the benefits by significant location of operation. STARS gives a single institution-wide eligibility rate with no employment-type split, so the comparison the disclosure exists to make cannot be drawn.
401-3 Parental leave	Partially reported	Number of weeks of paid maternity leave: 12 Narrative and/or website URL providing an overview of the maternity leave options available to employees: https://ucnet.universityofcalifornia.edu/wp-content/uploads/forms/pdf/pregnancy-newborn...	GRI 401-3 requires headcounts by gender: employees entitled to parental leave, those who took it, those who returned, those still employed twelve months later, and the resulting return-to-work and retention rates. STARS reports none of these — it reports the policy, not its uptake. 'Maternity' is also narrower than GRI's 'parental'. Descriptive only; supplies none of the headcounts or rates GRI 401-3 requires.

GRI 403: Occupational Health and Safety 2018

Disclosure	Status	Value / reason	Notes
403-1 Occupational health and safety management system	Partially reported	Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: https://ehs.berkeley.edu/workplace-safety	STARS never asks the 403-1 question, so an answer only appears where the institution volunteered it. Nothing records whether the system exists because of a legal requirement, which standard it follows, or which workers, activities and workplaces it covers — that is 403-1-b, and it is absent.
403-2 Hazard identification, risk assessment, and incident investigation	Not reported	No STARS data exists for this disclosure.	
403-3 Occupational health services	Partially reported	Does the institution make physical health services available to employees?: Yes	General employee health services are not occupational health services: GRI 403-3 is about the function that identifies and eliminates workplace hazards, and about how worker health data is kept confidential. STARS asks about neither.
403-4 Worker participation, consultation, and communication on occupational health and safety	Reported	Does the institution have an institution-wide health and safety committee or network of committees that brings together workers and management in the development and review of workplace health and safety policies and procedures?: Yes Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: https://ehs.berkeley.edu/workplace-safety	GRI 403-4-b further requires the committee's responsibilities, meeting frequency, decision-making authority, and whether any workers are unrepresented. STARS records existence only. Depth varies by institution; meeting frequency and decision-making authority are not consistently stated.
403-5 Worker training on occupational health and safety	Not reported	No STARS data exists for this disclosure.	
403-6 Promotion of worker health	Reported	Does the institution make physical health services available to employees?: Yes Does the institution make behavioral health services available to employees?: Yes Does the institution make free or reduced cost fitness activities available to employees?: Yes Does the institution prohibit smoking and tobacco use across the entire campus?: Yes Does the institution make contemplative and/or spiritual activities available to employees?: Yes	GRI 403-6-a also requires the scope of access provided; STARS records availability as a yes/no, with the scope left to the narrative. A prohibition is a control rather than a voluntary promotion service; STARS also records the weaker variants (indoor-only, restricted outdoor smoking) in separate fields.

Disclosure	Status	Value / reason	Notes
403-7 Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Not reported	No STARS data exists for this disclosure.	
403-8 Workers covered by an occupational health and safety management system	Not reported	No STARS data exists for this disclosure.	
403-9 Work-related injuries	Not reported	No STARS data exists for this disclosure.	PA-11 (Health, Safety and Wellbeing) contains no injury figures - its only numeric fields are STARS scoring artefacts. Cannot be reported.
403-10 Work-related ill health	Not reported	No STARS data exists for this disclosure.	PA-11 contains no ill-health figures. Cannot be reported.

GRI 405: Diversity and Equal Opportunity 2016

Disclosure	Status	Value / reason	Notes
405-1 Diversity of governance bodies and employees	Reported	Ethnic diversity index for executive staff: 0.51 Percentage of executive staff that identify as women or other marginalized gender identities: 50 Percentage of regular/permanent academic staff that identify as women or other marginalized gender identities: 36.70 Percentage of regular/permanent non-academic staff that identify as women or other marginalized gender identities: 56.50 Ethnic diversity index for academic staff: 0.50 Ethnic diversity index for non-academic staff: 0.69	This is a diversity INDEX (a single 0-1 concentration score), not the percentage breakdown GRI 405-1-b asks for. It shows how mixed the group is, not what share each group holds. No STARS credit collects employee age at all, so GRI 405-1's age-group split (under 30 / 30-50 / over 50) is unanswerable for every employee category. 405-1-a is still not answered: STARS PA-3 records which constituencies are represented on the highest decision-making body, never what percentage of that body they make up. DATA QUALITY: TU Dublin's value is the string '0 Revised on Nov. 24, 2025' — annotation text concatenated onto the figure — so the field is typed <code>text</code>, not <code>number</code>, and will not parse. Cork and Berkeley are clean. STARS reports one combined figure for 'women or other marginalized gender identities' rather than a percentage per gender, so the split GRI asks for is two buckets, not three.
405-2 Ratio of basic salary and remuneration of women to men	Not reported	No STARS data exists for this disclosure.	STARS FIELDS: nothing. PA-13 covers living-wage coverage and wage floors, not a gender pay ratio — despite the credit being named 'Pay Equity'. BUT the evidence documents linked from STARS answers partially close this: UCC publishes V3EDIGenderPayGapReport2025.pdf and TU Dublin Gender-Pay-Gap-Report-2023-FINALv1.pdf, both stating a mean gender pay gap. Berkeley links no equivalent. NOT a substitute for 405-2: GRI wants the ratio of basic salary and remuneration of women to men PER EMPLOYEE CATEGORY and per significant location; these reports give one organisation-wide percentage. Reportable as context with the source named, for 2 of 3 institutions, and it must be read out of the PDF by a human — it is not in any structured field, so it cannot go through the Jinja2 number path.

Verifying this report

Every figure above is recorded in `report/output/index_provenance.csv` with the exact STARS credit and field it came from, so any number can be traced to a row of the source dataset without trusting the generator. `tests/test_content_index.py` re-derives them independently of the code that produced them.
