

Sustainability Report — Technological University Dublin

Prepared **with reference to** the GRI Standards · compiled 2026-09-06

About this report. It is generated from Technological University Dublin's public AASHE STARS 3.0 submission, mapped onto the GRI Standards. It covers 78 GRI disclosures across 13 standards. Where a disclosure cannot be answered from STARS data, the report says so and why, rather than omitting the question. **How the figures got here — and why they can be trusted.** Every number in this document was copied by code from the extracted STARS dataset. The language model that wrote the prose was never shown a figure: it wrote named placeholders and the values were substituted afterwards, so it could not alter, round or invent one. After substitution the finished text is scanned, and the build fails if any number in it cannot be traced back to the source data. The model chose the sentences; it did not choose the numbers. **What that guarantee does not cover.** It applies to figures. Qualitative statements are drawn from the institution's own STARS narrative answers, but no mechanical check confirms that a sentence describing them is faithful. **"With reference to", not "in accordance with".** GRI reserves *in accordance* for reports answering every Universal Disclosure plus all disclosures for each material topic. This report does not, so it makes the weaker and correct claim. **Source and attribution.** [Technological University Dublin STARS Report](<https://reports.aashe.org/institutions/technological-university-dublin-dublin/report/2024-12-02/>), AASHE. STARS data is publicly accessible and used here with attribution to AASHE; it is not openly licensed.

The organisation and its reporting

Organisational details and reporting boundary

Technological University Dublin (TU Dublin) is a public higher education institution. In accordance with Disclosure 2-2, the reporting boundary encompasses all three of the university's campuses: the City campus—which includes Grangegorman, Bolton Street, Aungier Street, and central Dublin properties—alongside the Tallaght and Blanchardstown campuses. The operational scope covers all university estates, academic and non-academic functions, student bodies, staff, research hubs, and research repositories. Operational features reported within the institutional boundary also include an agricultural school.

Reporting period and coordination

Data for Scope 1 and Scope 2 greenhouse gas emissions correspond to the performance year 2023. The collation and validation of institutional data were coordinated by the Head of Sustainability Intelligence and a Data Analyst within Sustainability Intelligence.

External assurance

For Disclosure 2-5, the institution reports that no independent audit or external assurance process was used in the preparation of this report.

Framework limitations and omissions

Several specific disclosures required by the GRI Standards cannot be evidenced from the source data:

- **GRI 2-1 and GRI 2-6:** The source framework does not capture corporate metadata such as legal registration details, headquarters location, or country breakdown, nor does it record the full supply chain, product and service structures, or market profiles outside designated campus operational features.
- **GRI 2-3:** Contact details, designated channels for stakeholder enquiries, publication dates, and standard reporting frequencies are not collected by the framework. Furthermore, STARS operates through credit-specific reference years rather than a single unified reporting period.
- **GRI 2-4:** The framework evaluates institutional submissions as independent assessments and contains no mechanism to report restatements of information from previous periods.
- **GRI 2-5:** Detailed assurance disclosures—such as the assurance standard, the level of assurance, and relationships with assurance providers—are not structured within the reporting tool.

Activities and workers

Technological University Dublin manages its operations through a workforce measured by full-time equivalence. Under Disclosure 2-7, the total number of employees is 2,404.

Workforce Composition

The reporting of workforce data is subject to specific limitations based on the source framework. The figure provided for Disclosure 2-7 is a measure of full-time equivalent (FTE) staff and is not a headcount; for example, two employees working half-time are recorded as one unit. The institution does not report a further breakdown of this workforce by gender, region, or employment contract type, such as the distinction between permanent and temporary staff. Similarly, the data does not differentiate between full-time and part-time employment status beyond the consolidated FTE figure.

Workers who are not employees

In relation to Disclosure 2-8, this report cannot provide a count of workers who are not employees but whose work is controlled by the university. The source material used for this section does not collect data on the number of individual workers employed via third-party contractors or other non-employee arrangements. While the institution identifies

the number of significant contracting firms it engages with, this does not translate to a count of the personnel working under those contracts. Consequently, the total number of non-employee workers and their specific contractual relationships remain unreported.

Material topics

The topics addressed in this report are determined by the STARS framework, which AASHE designed for the higher-education sector. This report does not describe a bespoke materiality assessment process, as the STARS credit set is fixed and identical for all participating institutions. Consequently, this dataset cannot evidence the specific process by which the institution identified or prioritised its impacts on the economy, environment, and people, as required by GRI 3-1.

List of Material Topics

The institution has adopted measurable sustainability objectives in areas defined by the STARS framework, including campus operations; teaching, learning, and research; racial equity and social justice; administration and finance; and campus and community engagement. As these categories are predetermined by the reporting framework, they indicate where objectives have been set rather than representing a determination of significant impact by the institution. This report cannot evidence changes in material topics against previous periods, as required by GRI 3-2.

Management of Material Topics

Sustainability objectives are managed through the Strategic Plan and are overseen by the Vice President for Sustainability. The institution has established targets for greenhouse gas emissions and energy efficiency, which are intended to align with national climate action requirements for the public sector. The Sustainability Education team coordinates the transformation of the curriculum and professional development. TU Dublin is recognised as a Centre for Sustainability Across the Curriculum and has implemented various initiatives, including a sustainability education framework, the University Education Model, and partnerships with international organisations such as UNITAR.

This report is subject to limitations inherent in the STARS framework. STARS does not collect information regarding the specific impacts of the institution, its involvement through business relationships, or lessons learned, as required by GRI 3-3. Furthermore, the framework does not distinguish between actions that prevent potential harm and those that remediate actual harm, as specified in GRI 3-3.

Governance

Governance Structure and Composition

The Governing Body serves as the highest decision-making body for Technological University Dublin. Its membership includes representatives from the university's core

constituencies, including academic staff, non-managerial staff, and students. Specifically, the Governing Body includes two academic staff members who serve as voting members. While the presence of these representatives is confirmed, the source material does not provide a comprehensive breakdown of the body's composition regarding gender, tenure, independence, or the number of executive and non-executive members as required by Disclosure 2-9.

Delegation of Responsibility

The university has delegated the management of sustainability impacts to a Vice President for Sustainability. This executive role provides strategic direction and oversight for the coordination of university activities related to climate action and sustainable development. The Vice President governs four primary sustainability functions: Sustainability Education, Decarbonisation, Sustainability Intelligence, and Societal Engagement. Additionally, a Sustainability Action Research and Innovation Projects group supports these efforts.

Each function is led by a head of function, and the sustainability office is tasked with coordinating various campus constituencies to advance sustainability across the entire institution. The university also maintains a Sustainability Council to reflect the scale of transformation required. Under Disclosure 2-13, it is noted that the specific reporting line from these sustainability officers to the Governing Body and the frequency of their reporting are not consistently stated in the source material.

Role in Sustainability Reporting

The institution's sustainability reporting is supported by an executive cover letter from a senior leader. However, this endorsement does not confirm that the Governing Body reviewed and approved the reported information or the material topics identified, as required by Disclosure 2-14. The source material does not record the specific internal processes for the review and approval of the sustainability report.

Remuneration

The annual total compensation ratio, which measures the factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee, is 8.08. This figure, reported under Disclosure 2-21, represents a top-to-bottom pay spread. It is not directly comparable to ratios calculated against median employee compensation.

Limitations of Governance Reporting

The source framework does not collect several items of information required by the GRI standards. This report cannot evidence the criteria or processes for the nomination and selection of Governing Body members (GRI 2-10), nor does it provide information regarding the chair of the Governing Body (GRI 2-11). The specific role of the Governing

Body in overseeing the management of impacts (GRI 2-12) and the processes for preventing conflicts of interest (GRI 2-15) are not reported.

Furthermore, STARS does not record the communication of critical concerns to the Governing Body (GRI 2-16), measures to advance the body's collective knowledge (GRI 2-17), or processes for evaluating its performance (GRI 2-18). Detailed remuneration policies (GRI 2-19) and the processes for determining remuneration (GRI 2-20) are also outside the scope of the source data.

Strategy, policies and practices

Strategy, policies and practices

Technological University Dublin (TU Dublin) maintains a sustainability vision focused on the development of an equitable, environmentally responsible, and sustainable institution. This vision is articulated through several primary documents, including the Strategic Intent 2030, the university's Sustainability Strategy, the Climate Action Roadmap, and periodic progress reports regarding the United Nations Sustainable Development Goals. These documents collectively establish the framework for integrating sustainability into the university's core operations and strategic planning.

The university has appointed a Vice President for Sustainability to provide leadership, strategic direction, and oversight for the coordination of sustainability activities. This role reports directly to the President of the University. The university's approach to sustainability education and operational transformation is supported by the Sustainability Education team and the Sustainable Campus programme.

TU Dublin has formalised sustainability commitments that include reporting requirements, as detailed in its strategic documentation and climate action planning. The university maintains a code of conduct to guide suppliers regarding social and environmental expectations and provides sustainability-focused training opportunities for non-academic staff.

The university publishes information regarding grievance resolution and whistleblower protections to ensure these are accessible to employees. Measures to protect employee rights are supported by human resources policies, trade union engagement, and the Workplace Relations office, in alignment with obligations under the European Convention on Human Rights.

Regarding the requirements of the GRI standards, this report notes several limitations in the available data. In accordance with Disclosure GRI 2-22, the university's sustainability vision is documented, but the specific authorship by the highest governance body is not evidenced. Disclosure GRI 2-23 requires commitments to human rights and the UN Guiding Principles; the institution's current reporting focuses on broader sustainability commitments that include reporting requirements, and therefore does not address these specific areas.

Furthermore, Disclosure GRI 2-24 requires a description of how responsibility for commitments is allocated and embedded into procedures and business relationships; the available information describes outcomes and training for non-academic staff rather than the full scope of internal responsibility and integration. Disclosures GRI 2-25 and GRI 2-26 require information on grievance and advice mechanisms for all stakeholders; the institution reports on mechanisms accessible to employees, but this report cannot evidence the broader scope required by the standard. Disclosure GRI 2-28 is limited to commitments with reporting requirements, and the institution's broader memberships in external associations are not collected. Finally, this report cannot evidence compliance with laws and regulations as required by Disclosure GRI 2-27, as the institution does not report on instances of non-compliance or associated enforcement actions.

Stakeholder engagement

Stakeholder Engagement

In accordance with Disclosure GRI 2-29, Technological University Dublin maintains a structured approach to stakeholder engagement, ensuring that students, staff, and local community members are integrated into institutional decision-making processes through various formal and standing bodies.

Student engagement is primarily facilitated through the Students' Union, which acts as the representative conduit for the student body. Students participate in governance and policy development through membership in committees such as the University Steering Committee, the Green Campus committee, the Student Finance Committee, the Research Ethics Committee, and the EUt+ Governing Body. In addition to these standing bodies, the institution conducts regular surveys to capture student feedback on institutional plans and policies.

Academic staff are consulted on institutional decisions through established governance structures, including Faculty and School Boards. Academic quality processes, overseen by the Academic Quality Assurance and Enhancement Committee, provide further mechanisms for staff input. Resource allocation decisions are managed by the University Executive team, which includes representation from academic Deans. Furthermore, the institution engages with a trade union for academic staff, which serves as a social partner in relevant decision-making processes.

The institution maintains ongoing engagement with the local community, particularly regarding the development of the Grangegorman campus. Through collaboration with the Grangegorman Development Agency and the University's Estates and Campus Planning department, local community groups—such as the Stoneybatter SEC "Cosybatter"—have a direct voice in the planning of decarbonisation projects, including the district heating network and geothermal energy initiatives. The institution confirms the existence of standing bodies that allow for the democratic participation of non-affiliated community organisations in its governance.

The institution's approach to research impact also emphasises stakeholder involvement during the design and planning stages of projects to ensure societal relevance. This is supported by resources that provide strategies for identifying and engaging with stakeholders throughout the research lifecycle.

Regarding the limitations of this report, Disclosure GRI 2-29 requires an explanation of how stakeholders are identified and how the institution ensures that engagement is meaningful; however, the available data does not fully address these aspects.

Furthermore, this report cannot evidence the percentage of total employees covered by collective bargaining agreements as required by Disclosure GRI 2-30, as the institution does not report this specific metric.

Environmental performance

Energy consumption and intensity

Under GRI 302-1, Technological University Dublin reports total annual energy consumption of 38,391 Megawatt-hours. Electricity consumption across operations accounts for 15,053 Megawatt-hours, while stationary fuel consumption totals 21,072 Megawatt-hours. By fuel source, non-renewable combustion comprises natural gas at 21,056 Megawatt-hours, heating oil at 16 Megawatt-hours, propane and LPG at 0 Megawatt-hours, and coal or coke at 0 Megawatt-hours. Off-site heating and cooling imported to campus facilities accounts for 2,266 Megawatt-hours, including recovered heat from an adjacent data centre infrastructure network. Total renewable energy consumption stands at 8,397.21 Megawatt-hours, while renewable stationary fuel consumption is 0.21 Megawatt-hours, reflecting that renewable consumption is concentrated in electricity supply rather than combustible fuels. On-site renewable electricity exported to the grid totals 0 Megawatt-hours.

Institutional energy intensity under GRI 302-3 is 1,520.74 Kilowatt-hours and 182.05 Kilowatt-hours per square meter. Energy metrics are reported in megawatt-hours as collected by the source framework rather than joules as specified by GRI 302-1.

Greenhouse gas emissions

Greenhouse gas emissions calculations follow the GHG Protocol Corporate Standard, utilising utility billing records, public sector energy monitoring platforms, and national conversion factors. Under GRI 305-1, Scope 1 direct emissions from stationary combustion are 3,728 Metric tons of CO₂ equivalent, mobile combustion emissions from university fleet vehicles are 2 Metric tons of CO₂ equivalent, fugitive emissions are 55 Metric tons of CO₂ equivalent, and process emissions are 0 Metric tons of CO₂ equivalent. The institution does not report aggregate annual Scope 1 emissions or biogenic emissions separately.

Under GRI 305-2, indirect Scope 2 emissions from purchased electricity are 4,992 Metric tons of CO₂ equivalent under the market-based method and 0 Metric tons of CO₂

equivalent under the location-based method. Emissions associated with off-site heating and cooling imports are 181 Metric tons of CO₂ equivalent. Aggregate annual Scope 2 emissions are not reported as a separate total.

Under GRI 305-3, Scope 3 emissions comprise business travel at 410 Metric tons of CO₂ equivalent, employee and student commuting at 10,694 Metric tons of CO₂ equivalent, purchased goods and services at 26,269 Metric tons of CO₂ equivalent, capital goods at 83 Metric tons of CO₂ equivalent, operational waste handling at 9 Metric tons of CO₂ equivalent, and fuel- and energy-related activities not included in Scope 1 or Scope 2 at 0 Metric tons of CO₂ equivalent.

Operational greenhouse gas intensity under GRI 305-4 is 354.84 Kilograms of CO₂ equivalent and 42.48 Kilograms per square meter. Emissions reduction progress under GRI 305-5 is evaluated against a baseline established in 2018, when metering and billing data alignment was formalised. Baseline Scope 1 and Scope 2 emissions were 10,064 Metric tons of CO₂ equivalent. Current adjusted net emissions are 8,958 Metric tons of CO₂ equivalent, representing a reduction of 10.99% from the baseline. The institution reports 0 Metric tons of CO₂ equivalent of carbon offsets, meaning gross and net reductions are identical.

Water withdrawal and management

Under GRI 303-3, total water withdrawal is 56,570 Cubic meters, consisting entirely of potable water drawn from off-site municipal supply at 56,570 Cubic meters. Potable water withdrawal from on-site abstraction is 0 Cubic meters. Water quantities are recorded in cubic metres rather than megalitres.

In relation to GRI 303-1, physical water quantity risk for the main campus location is assessed as medium-high. The university maintains on-site rainwater harvesting systems to support water conservation.

Waste generation, diversion, and disposal

Under GRI 306-3, annual non-hazardous waste generation is 1,768.85 Metric tons, and construction and demolition waste generation is 1,244.08 Metric tons.

Resource recovery under GRI 306-4 diverted 1,452.64 Metric tons of non-hazardous waste from disposal. This diverted volume comprises 691.73 Metric tons sent for recycling, 56.01 Metric tons composted, and 704.90 Metric tons prepared for reuse. Diversion of construction and demolition waste totals 1,121.85 Metric tons, consisting of 531.95 Metric tons recycled and 589.89 Metric tons prepared for reuse.

Under GRI 306-5, non-hazardous waste directed to disposal in landfill or incineration is 316.21 Metric tons, and construction and demolition waste directed to disposal is 122.23 Metric tons.

Under GRI 306-2, waste minimization programmes include institutional surplus property management for redistribution, donation, or resale, as well as community reuse

initiatives for staff and students. Single-use plastics are partially replaced by certified compostable and paper alternatives, and a dedicated hazardous waste management protocol is maintained.

Supplier screening and reporting limitations

Under GRI 308-1, supplier sustainability considerations are incorporated into 0% of bid solicitations, and the university maintains a supplier code of conduct containing environmental provisions beyond statutory compliance.

Several GRI environmental disclosures cannot be reported from available monitoring systems. Material weight and recycled input disclosures (GRI 301-1, GRI 301-2, and GRI 301-3) and product efficiency metrics (GRI 302-5) do not apply to higher education provision. External value chain energy consumption (GRI 302-2) and energy reductions expressed in joules (GRI 302-4) are not recorded. Effluent discharge quality standards (GRI 303-2), emissions of ozone-depleting substances (GRI 305-6), and other significant air emissions including nitrogen oxides and sulphur oxides (GRI 305-7) are not captured within the framework. Process descriptions of waste generation (GRI 306-1), hazardous waste weights (GRI 306-3), and specific supplier screening results (GRI 308-2) are likewise uncollected.

Social and economic performance

Social and Economic Performance

The University maintains a commitment to fair remuneration and workforce equity. Regarding Disclosure 202-1, the institution benchmarks its wage floor for regular and permanent employees at 16.53. While the University monitors the percentage of employees receiving remuneration equivalent to at least a living wage, currently at 100%, this figure is distinct from the living wage threshold of 13.85. For student workers, the institution aligns its remuneration with the local hourly minimum wage for students, which is 12.70. It should be noted that Disclosure 202-1 requires a gender-based ratio of entry-level wages, which is not captured by current reporting frameworks. Furthermore, Disclosure 202-2 regarding the proportion of senior management hired from the local community, and Disclosure 204-1 concerning the proportion of spending on local suppliers, are not reported.

Workforce diversity is monitored across staff categories. The representation of women or other marginalised gender identities among executive staff is 41.09%. For regular and permanent academic staff, this figure is 41.55%, while for regular and permanent non-academic staff, it is 56.40%. Disclosure 405-1 requires a detailed percentage breakdown by gender and age, as well as information on the diversity of governance bodies; the provided data reflects a concentration index rather than the requested demographic distribution. Additionally, Disclosure 405-2, which requires the ratio of basic salary and remuneration of women to men, is not reported.

The University's approach to occupational health and safety is managed through a comprehensive system, including the University Safety, Health and Welfare Steering Committee, various campus committees, and working groups. These bodies facilitate worker participation and ensure compliance with legislative requirements. The institution provides physical and behavioural health services, offers fitness activities, and maintains a smoke-free campus environment.

Several disclosures under the GRI 403 standard cannot be evidenced by this report. Specifically, the institution does not report on the scope of its safety management system coverage (Disclosure 403-8), hazard identification and incident investigation processes (Disclosure 403-2), worker training (Disclosure 403-5), or the prevention of impacts linked to business relationships (Disclosure 403-7). Furthermore, data regarding work-related injuries (Disclosure 403-9) and work-related ill health (Disclosure 403-10) are not collected.

Regarding employment conditions, the University provides maternity leave entitlements of 26 weeks. The percentage of employees eligible for paid all-gender family or medical leave is 100%. Disclosure 401-1, concerning new employee hires and turnover, and Disclosure 401-2, regarding the specific comparison of benefits between full-time and temporary or part-time staff, are not reported. Disclosure 401-3 is addressed descriptively, though the required headcounts and retention rates are not available.

GRI content index

Reported	Partially reported	Not reported	Not assessed
26	15	37	0

“With reference to”, not “in accordance with.” GRI reserves in accordance for reports answering every Universal Disclosure (GRI 2) plus all disclosures for each material topic. This report does not, so it uses the weaker and correct claim.

GRI 2: General Disclosures 2021

Disclosure	Status	Value / reason	Notes
2-1 Organizational details	Reported	Institutional control: Public	GRI 2-1 also requires the legal name, the location of headquarters and the countries of operation. STARS carries none of these as fields — they are report metadata, not credit data.

Disclosure	Status	Value / reason	Notes
2-2 Entities included in the organization's sustainability reporting	Reported	Narrative outlining the institutional boundary used to complete this report: TU Dublin consists of three campuses, namely City, Tallaght, and Blanchardstown. The Ci...	GRI 2-2-a, the entities included in the report. STARS collects this as a free-text boundary narrative, so it answers the disclosure but is not structured as GRI's list of entities. △ THE THREE SUBMISSIONS DO NOT SHARE A REPORTING BOUNDARY , so figures normalised per person or per unit of area are not like-for-like across them. Cork's boundary narrative excludes its subsidiary companies by name — Campus Accommodation, the Mardyke Arena, the Student Centre and the Irish Management Institute — and excludes rented multi-tenant buildings; Berkeley's covers everything under its operational control, residences and grounds included. This biases Cork's per-person figures DOWNWARD : students living in Campus Accommodation still count in its full-time-equivalent denominator while their residential consumption falls outside the numerator. Per-area figures are less affected, since the excluded buildings are missing from both halves. Where such a figure is cited comparatively, name the boundary difference; never present the gap as performance alone.

Disclosure	Status	Value / reason	Notes
2-3 Reporting period, frequency and contact point	Partially reported	Performance year for scope 1 and 2 GHG emissions: 2023 List of personnel who led the reporting process: Dr. Philippe Lemarchand - Head of Sustainability Intelligence Dr Zeyan Zhao - Data Anal...	STARS has no single reporting period, and the per-credit years diverge inside one submission: Cork's credits run from 2023 (construction waste) to 2025 (living wage, investment), Berkeley's from 2023 to 2024. Only TU Dublin is uniform, at 2023. Any single period stated for a GRI report built on this data would be wrong for some of its figures. GRI 2-3 also requires the reporting frequency, the publication date and a contact point; STARS collects none of these. Named preparers are not a designated contact point: STARS records names and roles without contact details, and does not say who should receive enquiries.
2-4 Restatements of information	Not reported	No STARS data exists for this disclosure.	STARS v2.2 and earlier scored Operations credits against the institution's own baseline and v3.0 scores against a peer group, so cross-version figures are not comparable in the first place — see CLAUDE.md 6.4.

Disclosure	Status	Value / reason	Notes
2-5 External assurance	Reported	Were any independent audits or external assurance processes used in the preparation of this report?: No	GRI 2-5 additionally requires the assurance standard used, the level of assurance obtained, the limitations of the process and the relationship with the assurance provider. STARS captures none of these; the free-text field is optional and unstructured. Only populated where the institution answered yes to the assurance question, so it is absent for most submissions. Not populated by this institution: PRE-4 / Narrative outlining the independent audits or external assurance processes used in the preparation of this report.
2-6 Activities, value chain and other business relationships	Partially reported	Which of the following features are included within the institutional boundary?: Agricultural school	GRI 2-6 asks for the sectors the organization is active in, its value chain, its products and services and the markets served. A list of campus features covers only the activities, and only those with a physical footprint.
2-7 Employees	Partially reported	Full-time equivalent of employees: 2,404	FTE is not a headcount: two half-time staff count as one. GRI 2-7 further requires the breakdown by employment contract (permanent / temporary), by employment type (full- / part-time), by gender and by region. STARS collects a single undifferentiated figure.
2-8 Workers who are not employees	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-9 Governance structure and composition	Reported	Are one or more academic staff representatives included as members of the institution's highest decision-making body?: Yes Are one or more staff members representing non-managerial workers included as members of the institution's highest decision-making body?: Yes Are one or more student representatives included as members of the institution's highest decision-making body?: Yes Narrative and/or website URL outlining academic staff representation on the institution's highest decision-making body: TU Dublin's highest decision-making body is Governing Body. This includes both student ...	GRI 2-9 also requires the number of executive and non-executive members, their independence, tenure, other significant positions held, and composition by gender and under-represented social group. STARS records only whether each constituency is represented. See the caveat on the academic-staff row: representation is recorded, composition is not. See the caveat on the academic-staff row. Free text of variable depth; it is not a substitute for the numeric composition GRI 2-9-c requires.
2-10 Nomination and selection of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-11 Chair of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-12 Role of the highest governance body in overseeing the management of impacts	Not reported	No STARS data exists for this disclosure.	
2-13 Delegation of responsibility for managing impacts	Reported	Does the institution have one or more sustainability officers?: Yes Is at least one of the institution's sustainability committees, officers, or offices charged with coordinating various campus constituencies in the advancement of sustainability across the entire institution?: Yes Narrative and/or website URL providing an overview of the institution's sustainability officers: TU Dublin has a VP of Sustainability, Jennifer Boyer, who is governing 4 sustainability...	GRI 2-13-b also requires whether and how often those executives report to the highest governance body. STARS does not ask. See the caveat on the sustainability-officer row. Free text; the reporting line to the highest governance body is not consistently stated.

Disclosure	Status	Value / reason	Notes
2-14 Role of the highest governance body in sustainability reporting	Partially reported	Executive cover letter: TU_Dublin_Executive_letter_STARS_Application_2024.pdf	Endorsement by a senior executive is not review and approval by the highest governance body, and STARS records neither who approved the content nor whether material topics were reviewed. The field value is an attachment filename, so the letter's text is not in the dataset.
2-15 Conflicts of interest	Not reported	No STARS data exists for this disclosure.	
2-16 Communication of critical concerns	Not reported	No STARS data exists for this disclosure.	
2-17 Collective knowledge of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-18 Evaluation of the performance of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-19 Remuneration policies	Not reported	No STARS data exists for this disclosure.	
2-20 Process to determine remuneration	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-21 Annual total compensation ratio	Partially reported	The factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee: 8.08	The denominator differs and the difference is large. GRI 2-21 divides the highest-paid individual by the MEDIAN of all other employees; STARS divides the highest-paid senior administrator by the LOWEST-paid full-time employee. The STARS figure is therefore a top-to-bottom spread, not a top-to-typical ratio, and is not comparable with any GRI 2-21 figure published elsewhere. IL-62 is also an Innovation & Leadership bonus credit, so it is optional: only TU Dublin reports it (8.08); Berkeley and Cork leave it blank.
2-22 Statement on sustainable development strategy	Partially reported	Narrative detailing the institution's guiding vision or goals for sustainability and the plan(s) in which they are published: TU Dublin's sustainability vision is centered around its commitment to creating a susta...	GRI 2-22 requires the statement to come from the highest governance body or the most senior executive. STARS records the institution's published vision without attributing it to a named signatory, so the authorship the disclosure turns on is absent.
2-23 Policy commitments	Reported	Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	GRI 2-23 specifically requires commitments to respect human rights, to the UN Guiding Principles and to due diligence. A sustainability commitment is broader and does not imply any of these. STARS asks only for commitments carrying a reporting requirement, so commitments without one are out of scope of the field.

Disclosure	Status	Value / reason	Notes
2-24 Embedding policy commitments	Reported	Does the institution have a published code of conduct to guide suppliers on the institution's social and environmental expectations for them?: Yes Does the institution make available sustainability-focused training opportunities to non-academic staff on at least an annual basis?: Yes Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform...	GRI 2-24 also requires how responsibility is allocated internally and how the commitments are embedded in strategies and procedures. STARS asks about non-academic staff only, and about sustainability training generally rather than training on the specific commitments. It describes outcomes, not the allocation of responsibility, the integration into procedures, or the handling of commitments through business relationships that GRI 2-24-a enumerates.
2-25 Processes to remediate negative impacts	Partially reported	Does the institution publish information on grievance resolution in a format that is accessible to all employees?: Yes	STARS records only that the information is published — not how the mechanism operates, who may use it, or its effectiveness — and covers employees only, where GRI 2-25 covers all affected stakeholders.
2-26 Mechanisms for seeking advice and raising concerns	Reported	Does the institution publish information on whistleblower protections in a format that is accessible to all employees?: Yes Narrative and/or website URL providing an overview of the institution's published measures to protect employee rights: This is a legal obligation covered by Article 11 of the European Convention on Human Ri...	STARS records publication, not a description of how the mechanism operates, and covers employees only. GRI 2-26 extends to all individuals, including those in business relationships. Employees only; see the caveat on the whistleblower row.
2-27 Compliance with laws and regulations	Not reported	No STARS data exists for this disclosure.	
2-28 Membership associations	Partially reported	Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	Signing a charter is not membership of an association, and STARS restricts the field to commitments carrying a reporting requirement. The institution's association memberships are not collected as such.

Disclosure	Status	Value / reason	Notes
2-29 Approach to stakeholder engagement	Reported	Description of other mechanisms used to consult students on institutional decisions, plans, or policies: Students in TU Dublin sit on a wide variety of formal committees, working groups, and e... Description of other mechanisms used to consult academic staff on institutional decisions, plans, or policies: The University committee that decides on resource allocation is the University Executiv... Narrative and/or website URL outlining the ad hoc mechanisms used during the previous three years to consult local community members on institutional decisions, plans, or policies: The Stoneybatter SEC "Cosybatter" is engaged with the Grangegorman Development Agency (...) Does the institution have one or more ongoing bodies through which local community-based organizations not affiliated with the institution can democratically participate in its governance?: Yes	GRI 2-29 also asks how stakeholders are identified and how the organization ensures the engagement is meaningful. STARS asks about four fixed constituencies and does not cover suppliers, customers or vulnerable groups. See the caveat on the student-consultation row.
2-30 Collective bargaining agreements	Not reported	No STARS data exists for this disclosure.	

GRI 3: Material Topics 2021

Disclosure	Status	Value / reason	Notes
3-1 Process to determine material topics	Not reported	No STARS data exists for this disclosure.	A structural difference between the two FRAMEWORKS, not missing data and not a criticism of the institution. GRI assumes the organisation identifies and prioritises its own impacts; STARS assumes AASHE settled that for the higher-education sector and asks the institution to answer a fixed credit set. △ DO NOT WRITE THAT THE INSTITUTION DID NOT CONDUCT, DID NOT RUN, OR DOES NOT CARRY OUT A MATERIALITY ASSESSMENT. Nothing here supports it; STARS never asked, so a university that ran one has nowhere to say so. The defensible statement is that this report cannot evidence such a process, and that the topics it covers are AASHE's sector-level determination rather than an institution-specific one. PA-2 records a climate-vulnerability assessment and PA-3 records stakeholder consultation, but neither is a materiality process and neither should be presented as one.

Disclosure	Status	Value / reason	Notes
3-2 List of material topics	Partially reported	Has the institution adopted one or more measurable sustainability objectives that address campus operations?: Yes Has the institution adopted one or more measurable sustainability objectives that address teaching, learning, and/or research?: Yes Has the institution adopted one or more measurable sustainability objectives that address racial equity and/or social justice?: Yes Has the institution adopted one or more measurable sustainability objectives that address administration and/or finance?: Yes Has the institution adopted one or more measurable sustainability objectives that address campus and/or community engagement?: Yes	NOT A MATERIALITY DETERMINATION. These five areas are fixed by STARS and identical for every institution, so they say where an institution has set objectives, not which impacts it judged significant and why. GRI 3-2-b also requires changes against the previous reporting period, which a single STARS submission cannot show. Presenting these as material topics would overstate what this dataset establishes: it shows that objectives exist in an area, never how that area was chosen. Whether the institution determined its own topics outside STARS is not recorded here either way, and must not be asserted in either direction. See the campus-operations row: fixed areas, not a materiality determination.
3-3 Management of material topics	Partially reported	Narrative listing the institution's measurable sustainability objectives that address campus operations: 1. TU Dublin Strategic Plan 2024 - 2028 (Ref 1) include clear measurable sustainability... Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform... Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes	Asked per material topic, and no material-topics list exists (see GRI 3-2) — so these are institution-wide answers to a question GRI asks topic by topic. GRI 3-3 also requires the impacts themselves (3-3-a), whether the organisation is involved through its own activities or its business relationships (3-3-b), and lessons learned (3-3-e-iv). STARS collects none of those. It reports outcomes rather than distinguishing actions that prevent potential harm from actions that remediate actual harm, which is the split GRI 3-3-d asks for.

GRI 202: Market Presence 2016

Disclosure	Status	Value / reason	Notes
202-1 Ratios of standard entry level wage by gender compared to local minimum wage	Reported	Percentage of employees that receive remuneration equivalent to at least a living wage: 100 Living wage: 13.85 Wage floor for regular/permanent employees: 16.53 Local hourly minimum wage for students: 12.70	PARTIALLY SATISFIES GRI 202-1, AND THE RATIO IS DERIVABLE. Both terms are in STARS: PA-13's Wage floor for regular/permanent employees is the standard entry-level wage, and PA-9's Local hourly minimum wage for students is the local statutory minimum. Berkeley $22.54/16.99 = 1.33$, Cork $16.40/14.25 = 1.15$, TU Dublin $16.53/12.70 = 1.30$. Δ TWO LIMITS REMAIN. The minimum-wage field sits in a student-employment credit, so it is the minimum applying to student workers rather than one stated for the workforce generally — in all three cases it matches the statutory local minimum, but say which figure is being used. And GRI requires the ratio BY GENDER, which STARS does not collect at any credit; that half is unanswerable, not merely unsupplied. STARS separately benchmarks pay against a LIVING wage, which is a different and higher threshold than the minimum wage and must not be substituted for it. Values are bare numbers with no currency - EUR for the Irish universities, USD for Berkeley - and are not comparable across them without saying so. It lives in PA-9, a student-employment credit, so it is the minimum applying to student workers. In all three cases it matches the local statutory minimum (Berkeley 16.99, the City of Berkeley rate; Cork 14.25; TU Dublin 12.70, Ireland's national minimum), but the scoping should be stated rather than glossed.
202-2 Proportion of senior management hired from the local community	Not reported	No STARS data exists for this disclosure.	No STARS credit collects this.

GRI 204: Procurement Practices 2016

Disclosure	Status	Value / reason	Notes
204-1 Proportion of spending on local suppliers	Not reported	No STARS data exists for this disclosure.	

GRI 301: Materials 2016

Disclosure	Status	Value / reason	Notes
301-1 Materials used by weight or volume	Not reported	No STARS data exists for this disclosure.	This is a sector-fit finding of the same kind as AC-1 and EN-1 on the STARS side: the framework and the institution type do not line up.
301-2 Recycled input materials used	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
301-3 Reclaimed products and their packaging materials	Not reported	No STARS data exists for this disclosure.	

GRI 302: Energy 2016

Disclosure	Status	Value / reason	Notes
302-1 Energy consumption within the organization	Reported	Total annual energy consumption: 38,391 Megawatt-hours Total electricity consumption: 15,053 Megawatt-hours Total stationary fuel consumption: 21,072 Megawatt-hours Annual renewable energy consumption: 8,397.21 Megawatt-hours Renewable stationary fuels: 0.21 Megawatt-hours Total heating and cooling from off-site sources: 2,266 Megawatt-hours On-site renewable electricity exported: 0 Megawatt-hours Natural gas: 21,056 Megawatt-hours Heating oil: 16 Megawatt-hours Coal/coke: 0 Megawatt-hours Propane/LPG: 0 Megawatt-hours	GRI 302-1 expects joules or multiples and requires fuel consumption split into renewable and non-renewable. STARS reports megawatt-hours. Δ DO NOT CONVERT IN PROSE, AND DO NOT STATE THE CONVERSION FACTOR. A conversion factor is a figure, and no figure may enter the narrative that the code did not substitute. Report the STARS value in its own units and name the unit difference in words; if a figure in GRI's units is ever required, derive it in code from the verified value. Δ BERKELEY ONLY, AND IT IS AN INCOMPLETE RETURN RATHER THAN A RESULT. Berkeley's reported stationary fuel consumption is far too small — by a factor of roughly twenty-five — to have produced the stationary combustion emissions it reports in the same submission, and no fuel burns at that intensity. Its own emissions methodology names natural gas from the campus cogeneration plant as a Scope 1 source, while its energy return records no on-site non-renewable electricity at all: the plant is in the emissions inventory and absent from the energy one. State plainly that Berkeley's energy total is incomplete and that the size of the gap cannot be established from this data. Do NOT present Berkeley's energy figures as an efficiency achievement, and do NOT repeat any of this in Cork's or TU Dublin's report — neither shows the mismatch. GRI 302-1-a is fuel consumption from non-renewable sources. This is the STARS total for it, and the figure the cogeneration arithmetic below turns on. SCOPE MISMATCH. GRI 302-1-b is 'Total fuel consumption from renewable sources'. This STARS field also includes renewable ELECTRICITY (Berkeley 18,173 MWh), so it is broader than GRI's line and would overstate renewable fuel. The precise match is 'Renewable stationary fuels' - see the row below, which is ~0 for all three. Use this field only for a general renewables statement, never for GRI 302-1-b. Correct but near-empty: 0.21 MWh for TU Dublin, 0 for Cork and Berkeley. A finding in itself - these universities' renewable energy is almost entirely purchased electricity, not renewable fuel. GRI 302-1-b is therefore honestly reportable as ~zero. GRI 302-1 requires joules; STARS reports MMBtu or MWh, so this value is not in GRI's unit as collected. Zero for all three institutions in the current reporting year, so the mapping is correct but currently carries no signal. GRI 302-1 expects joules; STARS reports MWh. Zero at Cork; a small residual at TU Dublin and Berkeley. Units are MWh, not joules. A reported zero, not missing data. STARS also carries an Other stationary fuels catch-all, also zero everywhere, which is what makes this list of fuel types complete rather than merely partial.

Disclosure	Status	Value / reason	Notes
302-2 Energy consumption outside of the organization	Not reported	No STARS data exists for this disclosure.	
302-3 Energy intensity	Reported	Annual energy consumption per person: 1,520.74 Kilowatt-hours Annual energy consumption per unit of floor area: 182.05 Kilowatt-hours per square meter	GRI 302-3 energy intensity, normalised per person. Δ THE THREE SUBMISSIONS DO NOT SHARE A REPORTING BOUNDARY, so figures normalised per person or per unit of area are not like-for-like across them. Cork's boundary narrative excludes its subsidiary companies by name — Campus Accommodation, the Mardyke Arena, the Student Centre and the Irish Management Institute — and excludes rented multi-tenant buildings; Berkeley's covers everything under its operational control, residences and grounds included. This biases Cork's per-person figures DOWNWARD: students living in Campus Accommodation still count in its full-time-equivalent denominator while their residential consumption falls outside the numerator. Per-area figures are less affected, since the excluded buildings are missing from both halves. Where such a figure is cited comparatively, name the boundary difference; never present the gap as performance alone. Δ BERKELEY ONLY, AND IT IS AN INCOMPLETE RETURN RATHER THAN A RESULT. Berkeley's reported stationary fuel consumption is far too small — by a factor of roughly twenty-five — to have produced the stationary combustion emissions it reports in the same submission, and no fuel burns at that intensity. Its own emissions methodology names natural gas from the campus cogeneration plant as a Scope 1 source, while its energy return records no on-site non-renewable electricity at all: the plant is in the emissions inventory and absent from the energy one. State plainly that Berkeley's energy total is incomplete and that the size of the gap cannot be established from this data. Do NOT present Berkeley's energy figures as an efficiency achievement, and do NOT repeat any of this in Cork's or TU Dublin's report — neither shows the mismatch. GRI 302-3 energy intensity, normalised per unit of floor area.
302-4 Reduction of energy consumption	Not reported	No STARS data exists for this disclosure.	
302-5 Reductions in energy requirements of products and services	Not reported	No STARS data exists for this disclosure.	

GRI 303: Water and Effluents 2018

Disclosure	Status	Value / reason	Notes
303-1 Interactions with water as a shared resource	Reported	Level of physical water quantity risk for the institution's main campus: Medium-high Does the institution harvest rainwater on-site for storage and use?: Yes	A risk grade is not the description GRI 303-1 asks for: it says nothing about how water is withdrawn, consumed or discharged, how the impacts were identified, or how the institution works with stakeholders on shared water resources. It also covers the main campus only, where a multi-campus institution has several. Only one of the three institutions quantifies the volume harvested; the other two answer the yes/no only.
303-2 Management of water discharge-related impacts	Not reported	No STARS data exists for this disclosure.	
303-3 Water withdrawal	Reported	Total water withdrawal: 56,570 Cubic meters Potable water from off-site sources: 56,570 Cubic meters Potable water from on-site sources: 0 Cubic meters	GRI 303-3 requires a breakdown by source AND a separate figure for areas with water stress. STARS collects neither, so 303-3 cannot be fully satisfied from STARS alone. UNITS: GRI 303-3 requires megaliters and STARS reports cubic meters — a thousandfold difference, so the two are never interchangeable. The same mismatch affects GRI 302-1, which wants joules where STARS reports megawatt-hours. △ DO NOT CONVERT IN PROSE, AND DO NOT STATE THE CONVERSION FACTOR. A conversion factor is a figure, and no figure may enter the narrative that the code did not substitute. Report the STARS value in its own units and name the unit difference in words; if a figure in GRI's units is ever required, derive it in code from the verified value. Maps to the specific GRI 303-3-a-v category 'Third-party water'. It is the ONLY withdrawal source these universities have — on-site abstraction is zero for all three — so this equals the total. Zero for all three institutions, which is itself the finding: none of them abstracts its own water. Retained so the GRI 303-3 source breakdown is complete rather than silent.
303-4 Water discharge	Not reported	Assessed: the nearest STARS field (OP-3 / Annual volume of water recovered and/or returned) was reviewed and rejected as an answer to this disclosure.	GRI 303-4 requires discharge by destination, freshwater/other water split, and treatment level. STARS captures none of that. Weak mapping - verify before use.

Disclosure	Status	Value / reason	Notes
303-5 Water consumption	Not reported	Assessed: the nearest STARS field (OP-3 / Annual potable water use) was reviewed and rejected as an answer to this disclosure.	DEFINITIONS DIFFER. GRI 303-5 water consumption = withdrawal minus discharge. STARS 'annual potable water use' is potable supply only and is not computed that way. Do not present this as GRI 303-5 without recomputing.

GRI 305: Emissions 2016

Disclosure	Status	Value / reason	Notes
305-1 Direct (Scope 1) GHG emissions	Reported	Scope 1 GHG emissions from stationary combustion: 3,728 Metric tons of CO2 equivalent Scope 1 GHG emissions from mobile combustion: 2 Metric tons of CO2 equivalent Scope 1 GHG fugitive emissions: 55 Metric tons of CO2 equivalent Scope 1 GHG process emissions: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-1 additionally requires biogenic CO2 to be reported separately from the gross figure. GRI asks for biogenic CO2 specifically; the STARS field is CO2-equivalent and may not be the same boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-1-e) and the consolidation approach (305-1-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 1 GHG emissions; OP-6 / GHG emissions from biogenic sources.

Disclosure	Status	Value / reason	Notes
305-2 Energy indirect (Scope 2) GHG emissions	Reported	Scope 2 GHG emissions from off-site sources of electricity (market-based): 4,992 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of electricity (location-based): 0 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of heating and cooling: 181 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-2 requires location-based and, where available, market-based figures reported separately. Do not present a single scope 2 number without saying which method. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-2-e) and the consolidation approach (305-2-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 2 GHG emissions.

Disclosure	Status	Value / reason	Notes
305-3 Other indirect (Scope 3) GHG emissions	Reported	Scope 3 GHG emissions from business travel: 410 Metric tons of CO2 equivalent Scope 3 GHG emissions from commuting: 10,694 Metric tons of CO2 equivalent Scope 3 GHG emissions from purchased goods and services: 26,269 Metric tons of CO2 equivalent Scope 3 GHG emissions from capital goods: 83 Metric tons of CO2 equivalent Scope 3 GHG emissions from waste generated in operations: 9 Metric tons of CO2 equivalent Scope 3 GHG emissions from fuel- and energy-related activities not included in scope 1 or scope 2: 0 Metric tons of CO2 equivalent	
305-4 GHG emissions intensity	Reported	Annual scope 1 and 2 GHG emissions per person: 354.84 Kilograms of CO2 equivalent Annual scope 1 and 2 GHG emissions per unit of floor area: 42.48 Kilograms per square meter	GRI 305-4 emissions intensity, normalised per person. ▲ THE THREE SUBMISSIONS DO NOT SHARE A REPORTING BOUNDARY, so figures normalised per person or per unit of area are not like-for-like across them. Cork's boundary narrative excludes its subsidiary companies by name — Campus Accommodation, the Mardyke Arena, the Student Centre and the Irish Management Institute — and excludes rented multi-tenant buildings; Berkeley's covers everything under its operational control, residences and grounds included. This biases Cork's per-person figures DOWNWARD: students living in Campus Accommodation still count in its full-time-equivalent denominator while their residential consumption falls outside the numerator. Per-area figures are less affected, since the excluded buildings are missing from both halves. Where such a figure is cited comparatively, name the boundary difference; never present the gap as performance alone. GRI 305-4 emissions intensity, normalised per unit of floor area.

Disclosure	Status	Value / reason	Notes
305-5 Reduction of GHG emissions	Reported	Percentage reduction in scope 1 and 2 GHG emissions from baseline: 10.99 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Adjusted net scope 1 and 2 GHG emissions: 8,958 Metric tons of CO2 equivalent Third party certified carbon offsets: 0 Metric tons of CO2 equivalent	GRI 305-5 asks for reductions as an ABSOLUTE quantity in metric tons CO2e; STARS gives a percentage. △ THAT PERCENTAGE IS NET OF PURCHASED OFFSETS. STARS computes it from Adjusted net scope 1 and 2 GHG emissions, not from the gross total printed alongside it, so the two do not reconcile wherever an institution holds offsets: Berkeley's reduction is 6.54% gross and 9.83% net, a third of the headline figure being bought rather than achieved. Cork and TU Dublin agree on both bases only because their offsets are zero. Deriving the absolute reduction as baseline minus current gives the GROSS figure — correct, but not the number STARS prints. Say which basis is being quoted, and report the offsets separately as GRI 305-5's compilation requirement 2.9.5 demands. Derive it; do not present the baseline itself as a reduction. The subtraction is only valid because both figures cover the same combined scope 1 + 2 boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. GRI 305-5-b (gases included) and 305-5-d (which scopes the reductions occurred in) remain unanswered — STARS reports the reduction against the combined scope 1 + 2 total without attributing it to either. GROSS AND NET DIVERGE WHERE OFFSETS EXIST. Berkeley's reduction is 6.54% gross and 9.83% net; Cork's and TU Dublin's are identical either way because they hold no offsets. State which basis is being quoted. Berkeley holds 4,858 tCO2e of third-party certified offsets, which is the entire difference between its gross and adjusted-net reduction — about a third of the headline figure. STARS also reports a Net carbon sinks field which is CAPPED and does NOT equal the deduction actually applied, so do not use it to reconcile the two percentages.
305-6 Emissions of ozone-depleting substances (ODS)	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no ODS data at any credit. Cannot be reported from this dataset.
305-7 Nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no criteria-air-pollutant data. Cannot be reported from this dataset.

GRI 306: Waste 2020

Disclosure	Status	Value / reason	Notes
306-1 Waste generation and significant waste-related impacts	Not reported	No STARS data exists for this disclosure.	
306-2 Management of significant waste-related impacts	Reported	Does the institution have a surplus program through which institution-owned items that are no longer needed are stored for eventual sale, donation, or reuse?: Yes Does the institution have or participate in a reuse program through which employees and/or students can donate personal items for redistribution?: Yes Has the institution eliminated the on-site use of at least one form of single-use disposable plastic?: Yes Does the institution have a hazardous waste management program or protocol that includes measures to minimize or reduce the use of hazardous materials?: Yes Narrative and/or website URL providing an overview of the institution's composting program: Some of TU Dublin food service providers provide compostable alternatives to single-use... Does the institution have sufficient data on construction and demolition waste to pursue this indicator?: Yes	GRI 306-3 additionally requires hazardous waste to be quantified separately from non-hazardous. STARS quantifies only non-hazardous and construction-and-demolition waste, so the tonnage is unavailable. It states data sufficiency as a yes/no rather than describing the collection process, and covers construction and demolition waste only.

Disclosure	Status	Value / reason	Notes
306-3 Waste generated	Reported	Annual non-hazardous waste generated: 1,768.85 Metric tons Annual construction and demolition waste generated: 1,244.08 Metric tons	NOT EQUIVALENT - a subset. GRI 306-3-a is TOTAL waste generated including hazardous, broken down by composition. STARS reports non-hazardous only and collects no hazardous tonnage at any credit, so 306-3 cannot be fully satisfied. Do not present non-hazardous waste as the organisation's total waste. (Contrast the 306-4 and 306-5 rows, which are component : GRI has explicit non-hazardous lines at 306-4-c and 306-5-c for the STARS figures to answer, whereas 306-3 has no non-hazardous sub-requirement at all — which is why this row is weaker than those two, not equal to them.)
306-4 Waste diverted from disposal	Reported	Total non-hazardous waste diverted from disposal: 1,452.64 Metric tons Non-hazardous waste recycled: 691.73 Metric tons Non-hazardous waste composted: 56.01 Metric tons Non-hazardous waste prepared for reuse: 704.90 Metric tons Total construction and demolition waste diverted from disposal: 1,121.85 Metric tons Construction and demolition waste recycled: 531.95 Metric tons Construction and demolition waste prepared for reuse: 589.89 Metric tons	Exact scope match on GRI 306-4-c, including its split by recovery operation (reuse / recycling / other) from the rows below. GRI 306-4-d additionally wants each operation split on-site vs off-site, which STARS does not collect. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions. Reuse is a higher-value recovery route than recycling under the waste hierarchy, so omitting it understates the quality of diversion as well as the arithmetic. Cork recovers 1,162.73 of 6,837.95 tonnes this way.
306-5 Waste directed to disposal	Reported	Non-hazardous waste disposed of to a landfill or incinerator: 316.21 Metric tons Construction and demolition waste disposed of to a landfill or incinerator: 122.23 Metric tons	WEAKER THAN THE 306-4 EQUIVALENT: GRI 306-5-c also requires the total split across four disposal operations — incineration with energy recovery, incineration without, landfilling, other — and STARS merges landfill and incineration into a single figure. The waste-to-energy percentage field would separate incineration with recovery, but only two of the three institutions report it, so the split cannot be derived consistently. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.

GRI 308: Supplier Environmental Assessment 2016

Disclosure	Status	Value / reason	Notes
308-1 New suppliers that were screened using environmental criteria	Partially reported	Does the institution's supplier code of conduct include one or more expectations in regard to environmental impact that exceed or are additional to regulatory compliance?: Yes Percentage of bid solicitations that identify supplier sustainability considerations: 0	GRI 308-1 requires a percentage of new suppliers actually screened. STARS reports the existence of the criteria, not their application to any supplier, so no percentage can be derived. The denominator is bid solicitations, not new suppliers, and one solicitation may attract many suppliers or none. 'Sustainability considerations' is also broader than the environmental criteria GRI 308-1 specifies. The figure is 0 percent at TU Dublin, so a low value here should not be read as a screening failure without checking the product-specification field alongside it.
308-2 Negative environmental impacts in the supply chain and actions taken	Not reported	No STARS data exists for this disclosure.	

GRI 401: Employment 2016

Disclosure	Status	Value / reason	Notes
401-1 New employee hires and employee turnover	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no hiring or turnover figures.
401-2 Benefits provided to full-time employees that are not provided to temporary or part-time employees	Partially reported	Percentage of employees eligible for paid all-gender family/medical leave: 100	GRI 401-2 turns on the contrast between full-time employees and temporary or part-time employees, and asks for the benefits by significant location of operation. STARS gives a single institution-wide eligibility rate with no employment-type split, so the comparison the disclosure exists to make cannot be drawn.
401-3 Parental leave	Partially reported	Number of weeks of paid maternity leave: 26 Narrative and/or website URL providing an overview of the maternity leave options available to employees: The Maternity Protection Acts cover the entitlements for allstaff who are pregnant, hav...	GRI 401-3 requires headcounts by gender: employees entitled to parental leave, those who took it, those who returned, those still employed twelve months later, and the resulting return-to-work and retention rates. STARS reports none of these — it reports the policy, not its uptake. 'Maternity' is also narrower than GRI's 'parental'. Descriptive only; supplies none of the headcounts or rates GRI 401-3 requires.

GRI 403: Occupational Health and Safety 2018

Disclosure	Status	Value / reason	Notes
403-1 Occupational health and safety management system	Partially reported	Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	STARS never asks the 403-1 question, so an answer only appears where the institution volunteered it. Nothing records whether the system exists because of a legal requirement, which standard it follows, or which workers, activities and workplaces it covers — that is 403-1-b, and it is absent.
403-2 Hazard identification, risk assessment, and incident investigation	Not reported	No STARS data exists for this disclosure.	
403-3 Occupational health services	Partially reported	Does the institution make physical health services available to employees?: Yes	General employee health services are not occupational health services: GRI 403-3 is about the function that identifies and eliminates workplace hazards, and about how worker health data is kept confidential. STARS asks about neither.
403-4 Worker participation, consultation, and communication on occupational health and safety	Reported	Does the institution have an institution-wide health and safety committee or network of committees that brings together workers and management in the development and review of workplace health and safety policies and procedures?: Yes Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	GRI 403-4-b further requires the committee's responsibilities, meeting frequency, decision-making authority, and whether any workers are unrepresented. STARS records existence only. Depth varies by institution; meeting frequency and decision-making authority are not consistently stated.
403-5 Worker training on occupational health and safety	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
403-6 Promotion of worker health	Reported	Does the institution make physical health services available to employees?: Yes Does the institution make behavioral health services available to employees?: Yes Does the institution make free or reduced cost fitness activities available to employees?: Yes Does the institution prohibit smoking and tobacco use across the entire campus?: Yes Does the institution make contemplative and/or spiritual activities available to employees?: Yes	GRI 403-6-a also requires the scope of access provided; STARS records availability as a yes/no, with the scope left to the narrative. A prohibition is a control rather than a voluntary promotion service; STARS also records the weaker variants (indoor-only, restricted outdoor smoking) in separate fields.
403-7 Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Not reported	No STARS data exists for this disclosure.	
403-8 Workers covered by an occupational health and safety management system	Not reported	No STARS data exists for this disclosure.	
403-9 Work-related injuries	Not reported	No STARS data exists for this disclosure.	PA-11 (Health, Safety and Wellbeing) contains no injury figures - its only numeric fields are STARS scoring artefacts. Cannot be reported.
403-10 Work-related ill health	Not reported	No STARS data exists for this disclosure.	PA-11 contains no ill-health figures. Cannot be reported.

GRI 405: Diversity and Equal Opportunity 2016

Disclosure	Status	Value / reason	Notes
405-1 Diversity of governance bodies and employees	Reported	Ethnic diversity index for executive staff: 0 Revised on Nov. 24, 2025 Percentage of executive staff that identify as women or other marginalized gender identities: 41.09 Percentage of regular/permanent academic staff that identify as women or other marginalized gender identities: 41.55 Percentage of regular/permanent non-academic staff that identify as women or other marginalized gender identities: 56.40 Ethnic diversity index for academic staff: 0 Revised on Nov. 24, 2025 Ethnic diversity index for non-academic staff: 0 Revised on Nov. 24, 2025	This is a diversity INDEX (a single 0-1 concentration score), not the percentage breakdown GRI 405-1-b asks for. It shows how mixed the group is, not what share each group holds. No STARS credit collects employee age at all, so GRI 405-1's age-group split (under 30 / 30-50 / over 50) is unanswerable for every employee category. 405-1-a is still not answered: STARS PA-3 records which constituencies are represented on the highest decision-making body, never what percentage of that body they make up. DATA QUALITY: TU Dublin's value is the string '0 Revised on Nov. 24, 2025' — annotation text concatenated onto the figure — so the field is typed <code>text</code> , not <code>number</code> , and will not parse. Cork and Berkeley are clean. STARS reports one combined figure for 'women or other marginalized gender identities' rather than a percentage per gender, so the split GRI asks for is two buckets, not three.
405-2 Ratio of basic salary and remuneration of women to men	Not reported	No STARS data exists for this disclosure.	STARS FIELDS: nothing. PA-13 covers living-wage coverage and wage floors, not a gender pay ratio — despite the credit being named 'Pay Equity'. BUT the evidence documents linked from STARS answers partially close this: UCC publishes V3EDIGenderPayGapReport2025.pdf and TU Dublin Gender-Pay-Gap-Report-2023-FINALv1.pdf, both stating a mean gender pay gap. Berkeley links no equivalent. NOT a substitute for 405-2: GRI wants the ratio of basic salary and remuneration of women to men PER EMPLOYEE CATEGORY and per significant location; these reports give one organisation-wide percentage. Reportable as context with the source named, for 2 of 3 institutions, and it must be read out of the PDF by a human — it is not in any structured field, so it cannot go through the Jinja2 number path.

Verifying this report

Every figure above is recorded in `report/output/index_provenance.csv` with the exact STARS credit and field it came from, so any number can be traced to a row of the source dataset without trusting the generator. `tests/test_content_index.py` re-derives them independently of the code that produced them.
