

Sustainability Report — Technological University Dublin

Prepared **with reference to** the GRI Standards · compiled 2026-08-30

About this report. It is generated from Technological University Dublin's public AASHE STARS 3.0 submission, mapped onto the GRI Standards. It covers 78 GRI disclosures across 13 standards. Where a disclosure cannot be answered from STARS data, the report says so and why, rather than omitting the question. **How the figures got here — and why they can be trusted.** Every number in this document was copied by code from the extracted STARS dataset. The language model that wrote the prose was never shown a figure: it wrote named placeholders and the values were substituted afterwards, so it could not alter, round or invent one. After substitution the finished text is scanned, and the build fails if any number in it cannot be traced back to the source data. The model chose the sentences; it did not choose the numbers. **What that guarantee does not cover.** It applies to figures. Qualitative statements are drawn from the institution's own STARS narrative answers, but no mechanical check confirms that a sentence describing them is faithful. **"With reference to", not "in accordance with".** GRI reserves *in accordance* for reports answering every Universal Disclosure plus all disclosures for each material topic. This report does not, so it makes the weaker and correct claim. **Source and attribution.** [Technological University Dublin STARS Report](<https://reports.aashe.org/institutions/technological-university-dublin-dublin/report/2024-12-02/>), AASHE. STARS data is publicly accessible and used here with attribution to AASHE; it is not openly licensed.

The organisation and its reporting

Organisational Profile and Boundary

Technological University Dublin is a public higher education institution. Its organisational boundary for sustainability reporting covers three primary campus locations: the City campus—which includes Grangegorman, Bolton Street, Aungier Street, and additional Dublin city centre premises—alongside the Tallaght and Blanchardstown campuses. The operational scope covers all estates, university functions, staff, students, research hubs, and research outputs indexed in Scopus and Arrow. Specific campus features included within this operational footprint include an agricultural school.

Under GRI 2-1 and GRI 2-6, institutional details cover public operational activities; however, dataset fields do not capture the formal legal name, headquarters location, countries of operation, or full value chain and market details beyond physical campus activities. Regarding GRI 2-2, the reporting boundary incorporates all university facilities and functions, though the source framework does not state whether these entities differ

from those in the university's financial statements or how any minority interests are consolidated.

Reporting Period and Process

The reporting process was led by the Head of Sustainability Intelligence and a Data Analyst in Sustainability Intelligence, with data collection and validation involving contributors across university departments. For Scope 1 and Scope 2 greenhouse gas emissions accounted under GRI 305, data corresponds to the performance year 2023.

In relation to GRI 2-3, reporting period dates vary by subject area within the source framework, and data collection does not specify a publication frequency, publication date, or a designated contact point for public enquiries. Under GRI 2-4, restatements of information from prior periods are not reported, as submissions function as independent snapshots without comparative links to historical data.

External Assurance and Data Limitations

In accordance with GRI 2-5, no independent external assurance or audit was undertaken for the preparation of this report.

Data limitations within the defined reporting boundary are primarily restricted to data access constraints concerning third-party food service providers operating across the campuses.

Activities and workers

Technological University Dublin tracks its total staff footprint through institutional sustainability submissions. Under Disclosure 2-7, the overall size of the university's workforce is recorded as 2,404.

Reporting Limitations and Missing Disclosures

The current data source presents specific limitations regarding the detailed composition of the workforce when evaluated against GRI Standards.

The figure reported under Disclosure 2-7 reflects full-time equivalent staff rather than a head count of individual employees. As a result, two half-time staff members are aggregated into a single unit. Furthermore, the reporting framework collects a single undifferentiated total and does not provide the breakdowns required by GRI 2-7, such as disaggregation by employment contract (permanent and temporary), employment type (full-time and part-time), gender, or region.

In relation to Disclosure 2-8, which requires information on workers who are not employees but whose work is controlled by the organisation, the institution does not collect individual worker numbers or details of their contractual relationships. Source

tracking records the number of significant contractor firms rather than the individual personnel working under those agreements, leaving this disclosure unfulfilled.

Material topics

Topic Identification and Framework

Technological University Dublin aligns its sustainability reporting with the Sustainability Tracking, Assessment & Rating System (STARS), a sector-specific framework developed by the Association for the Advancement of Sustainability in Higher Education (AASHE). The university has established measurable sustainability objectives across the core operational and academic areas defined within the STARS credit set: campus operations; teaching, learning, and research; racial equity and social justice; administration and finance; and campus and community engagement.

Because these areas are derived directly from the standardised STARS credit set designed for higher education, the university did not perform its own materiality assessment and cannot describe one. The selected topics reflect the structured criteria of the external framework rather than an internal determination of material impacts.

Management of Sustainability Topics

Management of these sustainability areas is delivered through university-wide strategic planning and dedicated administrative structures, fulfilling Disclosure 3-3 through an institution-wide approach.

Operational sustainability targets are embedded within the university's strategic plan. These operational objectives focus on lowering greenhouse gas emissions and improving energy efficiency to support national climate action targets set for public sector bodies. Executive responsibility for campus operations rests with the Vice-President of Sustainability, supported by dedicated project leadership.

In education and research, management is led by the Sustainability Education team, which oversees curriculum transformation and staff development. AASHE recognises the institution as a Centre for Sustainability Across the Curriculum in Europe. Specific initiatives driving these objectives include a dedicated sustainability education framework, the University Education Model, participation in Sulitest, the creation of a Sustainability Toolkit, collaboration with UNITAR, and SATLE project funding. Institutional targets require staff and students to engage in sustainability education and training, supporting the university's aim to secure a STARS rating.

Reporting Limitations and Omissions

Reporting against GRI standards in this section is subject to several specific limitations:

For GRI 3-1, the university does not report a formal process for identifying, prioritising, or consulting on material impacts, as the topic set is predetermined by the STARS framework.

For Disclosure 3-2, the covered topics represent predefined STARS credit areas rather than an institution-specific materiality determination. Additionally, changes in material topics compared to previous reporting periods are not reported.

For Disclosure 3-3, management approaches are documented at the institutional level rather than topic by topic. The source material records progress and strategic outcomes, but does not distinguish actions that prevent potential harm from those that remediate actual harm, nor does it specify direct versus indirect impact involvement across business relationships or capture formal lessons learned.

Governance

Governance Structure and Composition

Technological University Dublin is governed by its Governing Body, which acts as the institution's highest decision-making body. The membership of the Governing Body includes representation from key university constituencies, specifically academic staff, non-managerial staff, and students. Two academic staff members sit on the Governing Body as voting members.

While constituency representation is established, the available data does not report the detailed numeric composition required under Disclosure 2-9. Information regarding the proportion of executive versus non-executive members, member independence, tenure, additional significant positions held, and demographic composition by gender or under-represented groups is not recorded.

Delegation of Responsibility for Sustainability

Responsibility for managing sustainability impacts across the institution is delegated to dedicated administrative leadership. Strategic oversight is held by a Vice President of Sustainability, who leads four core operational functions—Sustainability Education, Decarbonisation, Sustainability Intelligence, and Societal Engagement—alongside a dedicated group for Sustainability Action Research & Innovation Projects. Each function is managed by a head of function, supported by project managers, innovation leads, and Green-Campus Co-Chairs charged with coordinating sustainability initiatives across campus constituencies.

With respect to governance oversight under GRI 2-13, the source material confirms the delegation of sustainability management but does not detail the exact reporting lines to the Governing Body or the frequency with which sustainability executives present to it. Regarding GRI 2-14, executive endorsement of sustainability reporting is evidenced by an executive letter, but this does not specify whether the Governing Body formally reviewed and approved the material topics or the reported content.

Remuneration Metrics

To address GRI 2-21, the institution reports that the factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee is 8.08.

This figure represents a top-to-bottom compensation spread measured against the lowest-paid full-time worker. It differs from Disclosure 2-21, which calculates the ratio using the median compensation of all other employees, and is therefore not directly comparable to standard GRI 2-21 metrics published by other institutions.

Governance Processes and Limitations

The primary data source focuses on governance representation and managerial structure rather than governance oversight processes. Consequently, information on the following standard GRI disclosures is not reported in the available source material: - The criteria and processes for nominating, selecting, and appointing members to the Governing Body (GRI 2-10). - Whether the Chair of the Governing Body is an executive officer, and how conflicts of interest for this role are managed (GRI 2-11). - The explicit oversight role and effectiveness reviews conducted by the Governing Body concerning environmental and social impacts (GRI 2-12). - Formal processes for preventing, mitigating, and disclosing conflicts of interest within the highest governance body (GRI 2-15). - The nature and total number of critical concerns communicated to the Governing Body (GRI 2-16). - Actions taken to advance the collective sustainability knowledge of Governing Body members (GRI 2-17). - Formal procedures for evaluating the performance of the Governing Body (GRI 2-18). - General remuneration policies and the governance processes used to determine executive pay and benefits (GRI 2-19 and GRI 2-20).

Strategy, policies and practices

Strategic Vision and Policy Commitments

Technological University Dublin frames its sustainability vision around a commitment to establishing an equitable, sustainable, and environmentally responsible institution. This vision is articulated across several core strategic documents, including its Strategic Intent plan, Sustainability Strategy, Climate Action Roadmap, and regular progress reports on the United Nations Sustainable Development Goals. Strategic leadership for climate action and sustainability governance is provided by a Vice President for Sustainability, who oversees implementation across functional areas including sustainability education and campus decarbonisation.

To fulfil Disclosure 2-22, GRI standards require a strategic statement signed by the highest governance body or most senior executive. The institutional records set out the strategic vision but do not attribute it to a named signatory.

Under Disclosure 2-23, public policy commitments are recorded where they carry formal reporting requirements. These published plans establish broad organizational goals. They do not explicitly state commitments to human rights frameworks, the UN Guiding Principles, or dedicated due diligence processes, nor do the records capture commitments that lack mandatory reporting obligations.

Embedding Policies across Operations

The institution embeds environmental and social expectations into its supply chain through a published supplier code of conduct. For internal operations, annual sustainability training opportunities are provided for non-academic personnel. Curriculum transformation and staff upskilling are driven by a dedicated sustainability education team, which coordinates an institutional toolkit, strategic educational models, and international academic partnerships.

With respect to Disclosure 2-24, the available material records operational achievements and training availability, but does not detail internal allocations of responsibility, procedural integration into routine operations, or the management of policy commitments throughout business relationships. Furthermore, employee training disclosures focus on general sustainability topics for non-academic staff rather than training on specific policy commitments for all workforce categories.

Grievance Resolution and Mechanisms for Concerns

Processes for resolving grievances and protections for whistleblowers are published and accessible to employees. Human rights, employee protections, and advisory mechanisms are integrated through internal human resources policies, union representation, and national workplace relations bodies, aligned with the European Convention on Human Rights.

For Disclosure 2-25 and Disclosure 2-26, the institution confirms that information on grievance resolution and whistleblower protections is published for staff. The records do not describe the operational steps of these mechanisms, their usage rates, or their evaluated effectiveness. Additionally, while Disclosure 2-25 and Disclosure 2-26 cover all impacted stakeholders and individuals in business relationships, the available disclosures relate strictly to internal employees.

Membership Associations and Regulatory Compliance

Regarding Disclosure 2-28, institutional endorsements of external sustainability charters and frameworks are recorded within strategic planning commitments. However, signing formal charters is distinct from holding organizational memberships in external associations, which are not tracked in the source material.

Under Disclosure 2-27, institutions must report significant instances of non-compliance with laws and regulations, along with any associated monetary fines or sanctions.

Technological University Dublin does not collect regulatory compliance or enforcement data within this reporting framework, and no compliance metrics are reported.

Stakeholder engagement

Student Consultation

Technological University Dublin engages students in university decision-making, planning, and policy formulation through direct representation on standing bodies, working groups, and regular university surveys. Student representation is primarily coordinated through the Students' Union. Standing university committees and governance structures with active student involvement include the University Student Committee, the Green Campus committee, the Student Finance Committee, the Research Ethics Committee, and the EUt+ Governing Body.

Staff Consultation

Academic staff are consulted on institutional policies, resource allocation, and strategy through multiple governance committees and formal channels. The University Executive Team includes academic Deans to ensure academic leadership is reflected in resource allocation decisions. Academic staff participate in decisions through Faculty and School Boards, as well as academic quality assurance mechanisms such as the Academic Quality Assurance and Enhancement Committee. Furthermore, academic staff are represented by a trade union that is formally consulted on relevant operational and strategic matters as a social partner.

Community Engagement

The university maintains ongoing channels and standing arrangements that enable non-affiliated, community-based organisations to participate in institutional governance. Ad hoc mechanisms and project-level consultations are also deployed for local community engagement. For example, community members have direct input into decarbonisation planning through collaboration between local groups—such as the Stoneybatter Sustainable Energy Community—and university departments, including TU Dublin Estates and Campus Planning, Decarbonisation and Sustainability Intelligence, alongside the Grangegorman Development Agency. This collaboration explores the provision and distribution of renewable energy from the Grangegorman geothermal project through a district heating network. Broader public and community engagement is additionally supported through research impact frameworks and community engagement pilots across academic faculties.

Reporting Limitations and Omissions

In accordance with GRI 2-29, comprehensive reporting requires details on how stakeholders are identified and how the organisation ensures that engagement is meaningful. The reporting framework utilised here focuses on specific internal and local

constituencies, omitting systematic coverage of suppliers, commercial customers, or vulnerable groups. Data limitations also affect the detail available for certain student consultation mechanisms.

Regarding GRI 2-30, the institution does not report the percentage of total employees covered by collective bargaining agreements. Available data frameworks record policies on freedom of association and living wages for contractors, but do not track overall employee collective bargaining coverage.

Environmental performance

Energy Performance

Technological University Dublin records a total annual energy consumption of 38,391 Megawatt-hours. Electricity consumption accounts for 15,053 Megawatt-hours, while total stationary fuel consumption stands at 21,072 Megawatt-hours. The institution's stationary fuel mix comprises natural gas at 21,056 Megawatt-hours, heating oil at 16 Megawatt-hours, coal or coke at 0 Megawatt-hours, and propane or LPG at 0 Megawatt-hours. Energy drawn from off-site heating and cooling sources amounts to 2,266 Megawatt-hours, which includes recovered water-waste heat supplied from a nearby data centre to the Tallaght campus.

Annual renewable energy consumption totals 8,397.21 Megawatt-hours, of which renewable stationary fuels account for 0.21 Megawatt-hours. The volume of on-site renewable electricity exported is 0 Megawatt-hours. Expressed as intensity metrics, annual energy consumption is 1,520.74 Kilowatt-hours per full-time equivalent student and employee, and 182.05 Kilowatt-hours per square meter per square metre of gross floor area.

Under GRI 302-1, energy consumption must be disclosed in joules or multiples thereof; figures here are gathered in megawatt-hours and require mathematical conversion for direct standard alignment. In accordance with GRI 302-3, energy intensity ratios are reported using full-time headcount and gross floor area as respective denominators.

Greenhouse Gas Emissions

The university calculates its operational emissions inventory using the GHG Protocol Corporate Standard, drawing energy consumption data from utility bills, vehicle inventories, and the Sustainable Energy Authority of Ireland monitoring platform, alongside national conversion factors. Baseline Scope 1 and Scope 2 emissions were established in baseline year 2018 at 10,064 Metric tons of CO₂ equivalent. This baseline period was selected to ensure data consistency between utility billing and national monitoring platforms prior to pandemic-related operational disruptions.

Direct Scope 1 GHG emissions comprise 3,728 Metric tons of CO₂ equivalent from stationary combustion, 2 Metric tons of CO₂ equivalent from mobile combustion, 55 Metric tons of CO₂ equivalent from fugitive sources, and 0 Metric tons of CO₂ equivalent

from process emissions. Overall aggregate Scope 1 and biogenic emissions totals were not recorded separately in the reporting tool.

Indirect Scope 2 GHG emissions include market-based off-site electricity emissions of 4,992 Metric tons of CO₂ equivalent, location-based electricity emissions of 0 Metric tons of CO₂ equivalent, and off-site heating and cooling emissions of 181 Metric tons of CO₂ equivalent. Combined Scope 1 and Scope 2 emissions have achieved a reduction of 10.99% against the baseline year. Under GRI 305-5, absolute reduction amounts must be derived from baseline and operational year totals, as the reporting framework collects a combined percentage reduction across Scope 1 and Scope 2 without disaggregating by scope.

Reported Scope 3 GHG emissions encompass business travel at 410 Metric tons of CO₂ equivalent, employee and student commuting at 10,694 Metric tons of CO₂ equivalent, purchased goods and services at 26,269 Metric tons of CO₂ equivalent, capital goods at 83 Metric tons of CO₂ equivalent, waste generated in operations at 9 Metric tons of CO₂ equivalent, and fuel- and energy-related activities at 0 Metric tons of CO₂ equivalent.

Operational emissions intensity under GRI 305-4 stands at 354.84 Kilograms of CO₂ equivalent per full-time equivalent person and 42.48 Kilograms per square meter per square metre of building floor area.

Water Withdrawal and Management

The main campus of Technological University Dublin is situated in an area rated as having medium-high physical water quantity risk. To manage water interactions, the institution maintains on-site rainwater harvesting systems for storage and operational use.

Total annual water withdrawal across university facilities is 56,570 Cubic meters. Third-party off-site municipal supply provides 56,570 Cubic meters, while on-site water abstraction accounts for 0 Cubic meters. To meet GRI 303-3 reporting criteria fully, cubic metre figures must be converted to megalitres. The source framework does not break down withdrawal volumes by specific stress classification across secondary campus sites.

Waste Management and Resource Recovery

Waste management practices at the institution emphasize source reduction, materials reuse, and organic diversion. TU Dublin operates a surplus equipment programme to retain owned items for reuse, donation, or resale, alongside collection initiatives for personal items donated by students and staff. Single-use disposable plastics have been phased out in key catering operations, supported by compostable food service items certified to international standards, which enter the organic waste collection stream handled by contracted waste providers. Dry paper products are directed to designated recycling streams. A formal hazardous waste protocol is enforced to minimize chemical use and control hazardous handling.

Annual non-hazardous operational waste generation totals 1,768.85 Metric tons. Total non-hazardous waste diverted from disposal reaches 1,452.64 Metric tons, comprising 691.73 Metric tons recycled, 56.01 Metric tons composted, and 704.90 Metric tons prepared for reuse. Non-hazardous waste sent to landfill or incineration totals 316.21 Metric tons.

Construction and demolition projects generated 1,244.08 Metric tons of waste, with 1,121.85 Metric tons diverted from disposal (including 531.95 Metric tons recycled) and 122.23 Metric tons directed to landfill or incineration.

Under GRI 306-4 and GRI 306-5, waste metrics cover non-hazardous and construction streams; hazardous waste weights are not quantified by the reporting system. GRI 306-5 breakdown between landfilling and thermal incineration with or without energy recovery is consolidated into a single disposal total.

Sustainable Procurement

Environmental criteria are integrated into institutional purchasing policies. The university's supplier code of conduct establishes environmental expectations that exceed baseline regulatory requirements. Currently, 0% of procurement bid solicitations explicitly incorporate supplier sustainability criteria. Disclosure 308-1 tracks tender solicitation requirements rather than the specific percentage of new suppliers screened post-award.

Reporting Limitations and Data Gaps

Certain GRI disclosures cannot be reported due to framework boundaries or uncollected data: - **GRI 301-1, GRI 301-2, and GRI 301-3:** Not applicable as the institution does not manufacture physical products. - **GRI 302-2:** Off-site value chain energy consumption is not evaluated. - **GRI 302-4 and GRI 302-5:** Energy reductions are tracked via GHG emissions performance rather than standalone energy savings in joules; product energy reduction standard is non-applicable. - **GRI 303-2:** Effluent discharge quality standards and discharge-specific impacts are not monitored within the reporting tool. - **GRI 305-6 and GRI 305-7:** Production of ozone-depleting substances, NO_x, SO_x, and other localized air emissions are not tracked. - **GRI 306-1 and GRI 306-2:** Tonnage data for hazardous waste generation is unrecorded, and detailed upstream or downstream waste causal analysis is absent. - **GRI 308-2:** Post-assessment evaluations of supplier environmental impacts and formal remediation tracking are not recorded.

Social and economic performance

Pay and Remuneration

Technological University Dublin reports a wage floor for regular and permanent employees of 16.53, compared against a living wage benchmark of 13.85. The proportion of employees receiving remuneration equivalent to at least this living wage is 100%.

This reporting represents a sector-specific variant of Disclosure 202-1. The standard requires calculating the ratio of entry-level wages to the statutory minimum wage disaggregated by gender, whereas the available data evaluates remuneration against a living wage without gender breakdowns.

Employment Conditions and Leave

The proportion of employees eligible for paid all-gender family or medical leave is 100%. Under institutional policy, eligible staff commencing maternity leave receive 26 of paid maternity leave. Entitlements under the Maternity Protection Acts cover staff who are pregnant, have given birth, or are breastfeeding, and encompass transgender males holding a gender recognition certificate.

Regarding Disclosure 401-2, the reported eligibility figure is provided as an institution-wide average rather than broken down between full-time, part-time, and temporary contract types. For Disclosure 401-3, data is confined to policy provision; specific headcounts for leave uptake, return-to-work, and retention rates by gender are not recorded.

Occupational Health and Safety

Occupational health and safety is administered through a safety management system overseen by the University Safety, Health and Welfare Steering Committee, dedicated Campus Committees, and specialized working groups. These joint management-worker structures enable consultation and policy development under Disclosure 403-1 and Disclosure 403-4.

Physical and behavioural health services are made available to staff in accordance with Disclosure 403-3 and Disclosure 403-6. Additional health promotion initiatives include access to free or reduced-cost fitness facilities, contemplative and spiritual activities, and an institution-wide policy prohibiting smoking and tobacco use on campus.

Several GRI occupational health and safety disclosures are not collected by the reporting framework, including Disclosure 403-2 (hazard identification and incident investigation), Disclosure 403-5 (worker health and safety training), Disclosure 403-7 (impact mitigation across supplier relationships), Disclosure 403-8 (headcounts covered by safety management systems), Disclosure 403-9 (work-related injuries), and Disclosure 403-10 (work-related ill health).

Workforce Diversity

The proportion of staff identifying as women or other marginalised gender identities is 41.09% for executive staff, 41.55% for regular permanent academic staff, and 56.40% for regular permanent non-academic staff.

Reporting for Disclosure 405-1 combines female and marginalised gender identities into a single metric rather than individual gender categories, and age distributions across

employee categories are uncollected. Ethnic diversity index records in the source data contain concatenated text notes and cannot be converted into percentage breakdowns.

Summary of Omitted Disclosures

Information required for the following social disclosures is currently not reported: - GRI 202-2: Percentage of senior management recruited from the local community. - GRI 204-1: Proportion of procurement budget spent on local suppliers (procurement tracking focuses on social impact enterprise criteria rather than geographic location). - GRI 401-1: Total numbers and rates of new employee hires and employee turnover. - GRI 405-2: Ratio of basic salary and remuneration of women to men.

GRI content index

Reported	Partially reported	Not reported	Not assessed
25	16	37	0

“With reference to”, not “in accordance with.” GRI reserves in accordance for reports answering every Universal Disclosure (GRI 2) plus all disclosures for each material topic. This report does not, so it uses the weaker and correct claim.

GRI 2: General Disclosures 2021

Disclosure	Status	Value / reason	Notes
2-1 Organizational details	Reported	Institutional control: Public	GRI 2-1 also requires the legal name, the location of headquarters and the countries of operation. STARS carries none of these as fields — they are report metadata, not credit data.
2-2 Entities included in the organization’s sustainability reporting	Reported	Narrative outlining the institutional boundary used to complete this report: TU Dublin consists of three campuses, namely City, Tallaght, and Blanchardstown. The Ci...	GRI 2-2-b/c additionally ask whether the reporting entities differ from those in the financial statements and how minority interests are consolidated. STARS asks neither.

Disclosure	Status	Value / reason	Notes
2-3 Reporting period, frequency and contact point	Partially reported	Performance year for scope 1 and 2 GHG emissions: 2023 List of personnel who led the reporting process: Dr. Philippe Lemarchand - Head of Sustainability Intelligence Dr Zeyan Zhao - Data Anal...	STARS has no single reporting period, and the per-credit years diverge inside one submission: Cork's credits run from 2023 (construction waste) to 2025 (living wage, investment), Berkeley's from 2023 to 2024. Only TU Dublin is uniform, at 2023. Any single period stated for a GRI report built on this data would be wrong for some of its figures. GRI 2-3 also requires the reporting frequency, the publication date and a contact point; STARS collects none of these. Named preparers are not a designated contact point: STARS records names and roles without contact details, and does not say who should receive enquiries.
2-4 Restatements of information	Not reported	No STARS data exists for this disclosure.	STARS v2.2 and earlier scored Operations credits against the institution's own baseline and v3.0 scores against a peer group, so cross-version figures are not comparable in the first place — see CLAUDE.md 6.4.

Disclosure	Status	Value / reason	Notes
2-5 External assurance	Reported	Were any independent audits or external assurance processes used in the preparation of this report?: No	GRI 2-5 additionally requires the assurance standard used, the level of assurance obtained, the limitations of the process and the relationship with the assurance provider. STARS captures none of these; the free-text field is optional and unstructured. Only populated where the institution answered yes to the assurance question, so it is absent for most submissions. Not populated by this institution: PRE-4 / Narrative outlining the independent audits or external assurance processes used in the preparation of this report.
2-6 Activities, value chain and other business relationships	Partially reported	Which of the following features are included within the institutional boundary?: Agricultural school	GRI 2-6 asks for the sectors the organization is active in, its value chain, its products and services and the markets served. A list of campus features covers only the activities, and only those with a physical footprint.
2-7 Employees	Partially reported	Full-time equivalent of employees: 2,404	FTE is not a headcount: two half-time staff count as one. GRI 2-7 further requires the breakdown by employment contract (permanent / temporary), by employment type (full- / part-time), by gender and by region. STARS collects a single undifferentiated figure.
2-8 Workers who are not employees	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-9 Governance structure and composition	Reported	Are one or more academic staff representatives included as members of the institution's highest decision-making body?: Yes Are one or more staff members representing non-managerial workers included as members of the institution's highest decision-making body?: Yes Are one or more student representatives included as members of the institution's highest decision-making body?: Yes Narrative and/or website URL outlining academic staff representation on the institution's highest decision-making body: TU Dublin's highest decision-making body is Governing Body. This includes both student ...	GRI 2-9 also requires the number of executive and non-executive members, their independence, tenure, other significant positions held, and composition by gender and under-represented social group. STARS records only whether each constituency is represented. See the caveat on the academic-staff row: representation is recorded, composition is not. See the caveat on the academic-staff row. Free text of variable depth; it is not a substitute for the numeric composition GRI 2-9-c requires.
2-10 Nomination and selection of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-11 Chair of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-12 Role of the highest governance body in overseeing the management of impacts	Not reported	No STARS data exists for this disclosure.	
2-13 Delegation of responsibility for managing impacts	Reported	Does the institution have one or more sustainability officers?: Yes Is at least one of the institution's sustainability committees, officers, or offices charged with coordinating various campus constituencies in the advancement of sustainability across the entire institution?: Yes Narrative and/or website URL providing an overview of the institution's sustainability officers: TU Dublin has a VP of Sustainability, Jennifer Boyer, who is governing 4 sustainability...	GRI 2-13-b also requires whether and how often those executives report to the highest governance body. STARS does not ask. See the caveat on the sustainability-officer row. Free text; the reporting line to the highest governance body is not consistently stated.

Disclosure	Status	Value / reason	Notes
2-14 Role of the highest governance body in sustainability reporting	Partially reported	Executive cover letter: TU_Dublin_Executive_letter_STARS_Application_2024.pdf	Endorsement by a senior executive is not review and approval by the highest governance body, and STARS records neither who approved the content nor whether material topics were reviewed. The field value is an attachment filename, so the letter's text is not in the dataset.
2-15 Conflicts of interest	Not reported	No STARS data exists for this disclosure.	
2-16 Communication of critical concerns	Not reported	No STARS data exists for this disclosure.	
2-17 Collective knowledge of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-18 Evaluation of the performance of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-19 Remuneration policies	Not reported	No STARS data exists for this disclosure.	
2-20 Process to determine remuneration	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-21 Annual total compensation ratio	Partially reported	The factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee: 8.08	The denominator differs and the difference is large. GRI 2-21 divides the highest-paid individual by the MEDIAN of all other employees; STARS divides the highest-paid senior administrator by the LOWEST-paid full-time employee. The STARS figure is therefore a top-to-bottom spread, not a top-to-typical ratio, and is not comparable with any GRI 2-21 figure published elsewhere. IL-62 is also an Innovation & Leadership bonus credit, so it is optional: only TU Dublin reports it (8.08); Berkeley and Cork leave it blank.
2-22 Statement on sustainable development strategy	Partially reported	Narrative detailing the institution's guiding vision or goals for sustainability and the plan(s) in which they are published: TU Dublin's sustainability vision is centered around its commitment to creating a susta...	GRI 2-22 requires the statement to come from the highest governance body or the most senior executive. STARS records the institution's published vision without attributing it to a named signatory, so the authorship the disclosure turns on is absent.
2-23 Policy commitments	Reported	Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	GRI 2-23 specifically requires commitments to respect human rights, to the UN Guiding Principles and to due diligence. A sustainability commitment is broader and does not imply any of these. STARS asks only for commitments carrying a reporting requirement, so commitments without one are out of scope of the field.

Disclosure	Status	Value / reason	Notes
2-24 Embedding policy commitments	Reported	Does the institution have a published code of conduct to guide suppliers on the institution's social and environmental expectations for them?: Yes Does the institution make available sustainability-focused training opportunities to non-academic staff on at least an annual basis?: Yes Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform...	GRI 2-24 also requires how responsibility is allocated internally and how the commitments are embedded in strategies and procedures. STARS asks about non-academic staff only, and about sustainability training generally rather than training on the specific commitments. It describes outcomes, not the allocation of responsibility, the integration into procedures, or the handling of commitments through business relationships that GRI 2-24-a enumerates.
2-25 Processes to remediate negative impacts	Partially reported	Does the institution publish information on grievance resolution in a format that is accessible to all employees?: Yes	STARS records only that the information is published — not how the mechanism operates, who may use it, or its effectiveness — and covers employees only, where GRI 2-25 covers all affected stakeholders.
2-26 Mechanisms for seeking advice and raising concerns	Reported	Does the institution publish information on whistleblower protections in a format that is accessible to all employees?: Yes Narrative and/or website URL providing an overview of the institution's published measures to protect employee rights: This is a legal obligation covered by Article 11 of the European Convention on Human Ri...	STARS records publication, not a description of how the mechanism operates, and covers employees only. GRI 2-26 extends to all individuals, including those in business relationships. Employees only; see the caveat on the whistleblower row.
2-27 Compliance with laws and regulations	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-28 Membership associations	Partially reported	Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	Signing a charter is not membership of an association, and STARS restricts the field to commitments carrying a reporting requirement. The institution's association memberships are not collected as such.
2-29 Approach to stakeholder engagement	Reported	Description of other mechanisms used to consult students on institutional decisions, plans, or policies: Students in TU Dublin sit on a wide variety of formal committees, working groups, and e... Description of other mechanisms used to consult academic staff on institutional decisions, plans, or policies: The University committee that decides on resource allocation is the University Executiv... Narrative and/or website URL outlining the ad hoc mechanisms used during the previous three years to consult local community members on institutional decisions, plans, or policies: The Stoneybatter SEC "Cosybatter" is engaged with the Grangegorman Development Agency (... Does the institution have one or more ongoing bodies through which local community-based organizations not affiliated with the institution can democratically participate in its governance?: Yes	GRI 2-29 also asks how stakeholders are identified and how the organization ensures the engagement is meaningful. STARS asks about four fixed constituencies and does not cover suppliers, customers or vulnerable groups. See the caveat on the student-consultation row.
2-30 Collective bargaining agreements	Not reported	No STARS data exists for this disclosure.	

GRI 3: Material Topics 2021

Disclosure	Status	Value / reason	Notes
3-1 Process to determine material topics	Not reported	No STARS data exists for this disclosure.	This is a structural difference, not missing data. AASHE determined materiality for the whole higher-education sector when it designed the STARS credit set; the institution answers that fixed set rather than identifying its own impacts. PA-2 records a climate-vulnerability assessment and PA-3 records stakeholder consultation, but neither is a materiality process and neither should be presented as one.

Disclosure	Status	Value / reason	Notes
3-2 List of material topics	Partially reported	Has the institution adopted one or more measurable sustainability objectives that address campus operations?: Yes Has the institution adopted one or more measurable sustainability objectives that address teaching, learning, and/or research?: Yes Has the institution adopted one or more measurable sustainability objectives that address racial equity and/or social justice?: Yes Has the institution adopted one or more measurable sustainability objectives that address administration and/or finance?: Yes Has the institution adopted one or more measurable sustainability objectives that address campus and/or community engagement?: Yes	NOT A MATERIALITY DETERMINATION. These five areas are fixed by STARS and identical for every institution, so they say where an institution has set objectives, not which impacts it judged significant and why. GRI 3-2-b also requires changes against the previous reporting period, which a single STARS submission cannot show. Presenting these as material topics would overstate what the institution actually did. See the campus-operations row: fixed areas, not a materiality determination.
3-3 Management of material topics	Partially reported	Narrative listing the institution's measurable sustainability objectives that address campus operations: 1. TU Dublin Strategic Plan 2024 – 2028 (Ref 1) include clear measurable sustainability... Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform... Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes	Asked per material topic, and no material-topics list exists (see GRI 3-2) — so these are institution-wide answers to a question GRI asks topic by topic. GRI 3-3 also requires the impacts themselves (3-3-a), whether the organisation is involved through its own activities or its business relationships (3-3-b), and lessons learned (3-3-e-iv). STARS collects none of those. It reports outcomes rather than distinguishing actions that prevent potential harm from actions that remediate actual harm, which is the split GRI 3-3-d asks for.

GRI 202: Market Presence 2016

Disclosure	Status	Value / reason	Notes
202-1 Ratios of standard entry level wage by gender compared to local minimum wage	Partially reported	Percentage of employees that receive remuneration equivalent to at least a living wage: 100 Living wage: 13.85 Wage floor for regular/permanent employees: 16.53	DOES NOT SATISFY GRI 202-1. GRI wants the RATIO of standard entry-level wage to the local MINIMUM wage, BY GENDER. STARS benchmarks against a LIVING wage instead and has no gender split. Precisely: the NUMERATOR exists — PA-13's Wage floor for regular/permanent employees is the entry-level wage — but the local statutory minimum wage is not in STARS at any credit, and the gender split is not collected anywhere. Report only as a higher-education sector variant, stating plainly that 202-1 is unsatisfied. Values are bare numbers with no currency - EUR for the Irish universities, USD for Berkeley - and are not comparable across them without saying so. The DENOMINATOR is what is missing, not the numerator. STARS benchmarks against a LIVING wage, not the local statutory MINIMUM wage, and carries no minimum-wage figure at all. Supplying one would mean introducing an external constant, which is outside this project's verified-data pipeline. GRI also requires the ratio BY GENDER, which STARS does not collect at any credit — that half is unanswerable, not merely unsupplied. STARS additionally reports separate floors for short-term/casual academic and non-academic staff. Values are bare numbers: EUR for the Irish universities, USD for Berkeley, and not comparable without saying so.
202-2 Proportion of senior management hired from the local community	Not reported	No STARS data exists for this disclosure.	No STARS credit collects this.

GRI 204: Procurement Practices 2016

Disclosure	Status	Value / reason	Notes
204-1 Proportion of spending on local suppliers	Not reported	No STARS data exists for this disclosure.	

GRI 301: Materials 2016

Disclosure	Status	Value / reason	Notes
301-1 Materials used by weight or volume	Not reported	No STARS data exists for this disclosure.	This is a sector-fit finding of the same kind as AC-1 and EN-1 on the STARS side: the framework and the institution type do not line up.
301-2 Recycled input materials used	Not reported	No STARS data exists for this disclosure.	
301-3 Reclaimed products and their packaging materials	Not reported	No STARS data exists for this disclosure.	

GRI 302: Energy 2016

Disclosure	Status	Value / reason	Notes
302-1 Energy consumption within the organization	Reported	Total annual energy consumption: 38,391 Megawatt-hours Total electricity consumption: 15,053 Megawatt-hours Total stationary fuel consumption: 21,072 Megawatt-hours Annual renewable energy consumption: 8,397.21 Megawatt-hours Renewable stationary fuels: 0.21 Megawatt-hours Total heating and cooling from off-site sources: 2,266 Megawatt-hours On-site renewable electricity exported: 0 Megawatt-hours Natural gas: 21,056 Megawatt-hours Heating oil: 16 Megawatt-hours Coal/coke: 0 Megawatt-hours Propane/LPG: 0 Megawatt-hours	GRI 302-1 expects joules or multiples and requires fuel consumption split into renewable and non-renewable. STARS reports megawatt-hours - convertible, but state the conversion. SCOPE MISMATCH. GRI 302-1-b is 'Total fuel consumption from renewable sources'. This STARS field also includes renewable ELECTRICITY (Berkeley 18,173 MWh), so it is broader than GRI's line and would overstate renewable fuel. The precise match is 'Renewable stationary fuels' - see the row below, which is ~0 for all three. Use this field only for a general renewables statement, never for GRI 302-1-b. Correct but near-empty: 0.21 MWh for TU Dublin, 0 for Cork and Berkeley. A finding in itself - these universities' renewable energy is almost entirely purchased electricity, not renewable fuel. GRI 302-1-b is therefore honestly reportable as ~zero. GRI 302-1 requires joules; STARS reports MMBtu or MWh, so the value must be converted before it is cited as a GRI figure. Zero for all three institutions in the current reporting year, so the mapping is correct but currently carries no signal. GRI 302-1 expects joules; STARS reports MWh — convertible, but state the conversion. Zero at Cork; a small residual at TU Dublin and Berkeley. Units are MWh, not joules. A reported zero, not missing data. STARS also carries an Other stationary fuels catch-all, also zero everywhere, which is what makes this list of fuel types complete rather than merely partial.
302-2 Energy consumption outside of the organization	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
302-3 Energy intensity	Reported	Annual energy consumption per person: 1,520.74 Kilowatt-hours Annual energy consumption per unit of floor area: 182.05 Kilowatt-hours per square meter	Denominator (FTE students + employees) must be disclosed with the ratio. Denominator is gross floor area; must be disclosed with the ratio.
302-4 Reduction of energy consumption	Not reported	No STARS data exists for this disclosure.	
302-5 Reductions in energy requirements of products and services	Not reported	No STARS data exists for this disclosure.	

GRI 303: Water and Effluents 2018

Disclosure	Status	Value / reason	Notes
303-1 Interactions with water as a shared resource	Reported	Level of physical water quantity risk for the institution's main campus: Medium-high Does the institution harvest rainwater on-site for storage and use?: Yes	A risk grade is not the description GRI 303-1 asks for: it says nothing about how water is withdrawn, consumed or discharged, how the impacts were identified, or how the institution works with stakeholders on shared water resources. It also covers the main campus only, where a multi-campus institution has several. Only one of the three institutions quantifies the volume harvested; the other two answer the yes/no only.
303-2 Management of water discharge-related impacts	Not reported	No STARS data exists for this disclosure.	
303-3 Water withdrawal	Reported	Total water withdrawal: 56,570 Cubic meters Potable water from off-site sources: 56,570 Cubic meters Potable water from on-site sources: 0 Cubic meters	GRI 303-3 requires a breakdown by source AND a separate figure for areas with water stress. STARS collects neither, so 303-3 cannot be fully satisfied from STARS alone. UNITS: GRI 303-3 requires megaliters and STARS reports cubic meters. Divide by 1,000 before citing the figure as a GRI 303-3 value, and state the conversion — the same treatment GRI 302-1 gets for megawatt-hours against joules. Maps to the specific GRI 303-3-a-v category 'Third-party water'. It is the ONLY withdrawal source these universities have — on-site abstraction is zero for all three — so this equals the total. Zero for all three institutions, which is itself the finding: none of them abstracts its own water. Retained so the GRI 303-3 source breakdown is complete rather than silent.

Disclosure	Status	Value / reason	Notes
303-4 Water discharge	Not reported	Assessed: the nearest STARS field (OP-3 / Annual volume of water recovered and/or returned) was reviewed and rejected as an answer to this disclosure.	GRI 303-4 requires discharge by destination, freshwater/other water split, and treatment level. STARS captures none of that. Weak mapping - verify before use.
303-5 Water consumption	Not reported	Assessed: the nearest STARS field (OP-3 / Annual potable water use) was reviewed and rejected as an answer to this disclosure.	DEFINITIONS DIFFER. GRI 303-5 water consumption = withdrawal minus discharge. STARS 'annual potable water use' is potable supply only and is not computed that way. Do not present this as GRI 303-5 without recomputing.

GRI 305: Emissions 2016

Disclosure	Status	Value / reason	Notes
305-1 Direct (Scope 1) GHG emissions	Reported	Scope 1 GHG emissions from stationary combustion: 3,728 Metric tons of CO2 equivalent Scope 1 GHG emissions from mobile combustion: 2 Metric tons of CO2 equivalent Scope 1 GHG fugitive emissions: 55 Metric tons of CO2 equivalent Scope 1 GHG process emissions: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-1 additionally requires biogenic CO2 to be reported separately from the gross figure. GRI asks for biogenic CO2 specifically; the STARS field is CO2-equivalent and may not be the same boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-1-e) and the consolidation approach (305-1-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 1 GHG emissions; OP-6 / GHG emissions from biogenic sources.

Disclosure	Status	Value / reason	Notes
305-2 Energy indirect (Scope 2) GHG emissions	Reported	Scope 2 GHG emissions from off-site sources of electricity (market-based): 4,992 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of electricity (location-based): 0 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of heating and cooling: 181 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-2 requires location-based and, where available, market-based figures reported separately. Do not present a single scope 2 number without saying which method. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-2-e) and the consolidation approach (305-2-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 2 GHG emissions.

Disclosure	Status	Value / reason	Notes
305-3 Other indirect (Scope 3) GHG emissions	Reported	Scope 3 GHG emissions from business travel: 410 Metric tons of CO2 equivalent Scope 3 GHG emissions from commuting: 10,694 Metric tons of CO2 equivalent Scope 3 GHG emissions from purchased goods and services: 26,269 Metric tons of CO2 equivalent Scope 3 GHG emissions from capital goods: 83 Metric tons of CO2 equivalent Scope 3 GHG emissions from waste generated in operations: 9 Metric tons of CO2 equivalent Scope 3 GHG emissions from fuel- and energy-related activities not included in scope 1 or scope 2: 0 Metric tons of CO2 equivalent	
305-4 GHG emissions intensity	Reported	Annual scope 1 and 2 GHG emissions per person: 354.84 Kilograms of CO2 equivalent Annual scope 1 and 2 GHG emissions per unit of floor area: 42.48 Kilograms per square meter	GRI 305-4 requires the denominator to be stated. Here it is FTE students + employees, not a corporate revenue or output metric. Denominator is gross floor area in square meters; must be disclosed alongside the ratio.

Disclosure	Status	Value / reason	Notes
305-5 Reduction of GHG emissions	Reported	Percentage reduction in scope 1 and 2 GHG emissions from baseline: 10.99 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and...	GRI 305-5 asks for reductions as an ABSOLUTE quantity in metric tons CO2e; STARS gives a percentage. Not directly substitutable - derive the absolute figure from the baseline and current fields. Derive it; do not present the baseline itself as a reduction. The subtraction is only valid because both figures cover the same combined scope 1 + 2 boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. GRI 305-5-b (gases included) and 305-5-d (which scopes the reductions occurred in) remain unanswered — STARS reports the reduction against the combined scope 1 + 2 total without attributing it to either.
305-6 Emissions of ozone-depleting substances (ODS)	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no ODS data at any credit. Cannot be reported from this dataset.
305-7 Nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no criteria-air-pollutant data. Cannot be reported from this dataset.

GRI 306: Waste 2020

Disclosure	Status	Value / reason	Notes
306-1 Waste generation and significant waste-related impacts	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
306-2 Management of significant waste-related impacts	Reported	Does the institution have a surplus program through which institution-owned items that are no longer needed are stored for eventual sale, donation, or reuse?: Yes Does the institution have or participate in a reuse program through which employees and/or students can donate personal items for redistribution?: Yes Has the institution eliminated the on-site use of at least one form of single-use disposable plastic?: Yes Does the institution have a hazardous waste management program or protocol that includes measures to minimize or reduce the use of hazardous materials?: Yes Narrative and/or website URL providing an overview of the institution's composting program: Some of TU Dublin food service providers provide compostable alternatives to single-use... Does the institution have sufficient data on construction and demolition waste to pursue this indicator?: Yes	GRI 306-3 additionally requires hazardous waste to be quantified separately from non-hazardous. STARS quantifies only non-hazardous and construction-and-demolition waste, so the tonnage is unavailable. It states data sufficiency as a yes/no rather than describing the collection process, and covers construction and demolition waste only.
306-3 Waste generated	Reported	Annual non-hazardous waste generated: 1,768.85 Metric tons Annual construction and demolition waste generated: 1,244.08 Metric tons	NOT EQUIVALENT - a subset. GRI 306-3-a is TOTAL waste generated including hazardous, broken down by composition. STARS reports non-hazardous only and collects no hazardous tonnage at any credit, so 306-3 cannot be fully satisfied. Do not present non-hazardous waste as the organisation's total waste. (Contrast the 306-4 and 306-5 rows, which are component : GRI has explicit non-hazardous lines at 306-4-c and 306-5-c for the STARS figures to answer, whereas 306-3 has no non-hazardous sub-requirement at all — which is why this row is weaker than those two, not equal to them.)

Disclosure	Status	Value / reason	Notes
306-4 Waste diverted from disposal	Reported	Total non-hazardous waste diverted from disposal: 1,452.64 Metric tons Non-hazardous waste recycled: 691.73 Metric tons Non-hazardous waste composted: 56.01 Metric tons Non-hazardous waste prepared for reuse: 704.90 Metric tons Total construction and demolition waste diverted from disposal: 1,121.85 Metric tons Construction and demolition waste recycled: 531.95 Metric tons	Exact scope match on GRI 306-4-c, including its split by recovery operation (reuse / recycling / other) from the rows below. GRI 306-4-d additionally wants each operation split on-site vs off-site, which STARS does not collect. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.
306-5 Waste directed to disposal	Reported	Non-hazardous waste disposed of to a landfill or incinerator: 316.21 Metric tons Construction and demolition waste disposed of to a landfill or incinerator: 122.23 Metric tons	WEAKER THAN THE 306-4 EQUIVALENT: GRI 306-5-c also requires the total split across four disposal operations — incineration with energy recovery, incineration without, landfilling, other — and STARS merges landfill and incineration into a single figure. The waste-to-energy percentage field would separate incineration with recovery, but only two of the three institutions report it, so the split cannot be derived consistently. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.

GRI 308: Supplier Environmental Assessment 2016

Disclosure	Status	Value / reason	Notes
308-1 New suppliers that were screened using environmental criteria	Partially reported	Does the institution's supplier code of conduct include one or more expectations in regard to environmental impact that exceed or are additional to regulatory compliance?: Yes Percentage of bid solicitations that identify supplier sustainability considerations: 0	GRI 308-1 requires a percentage of new suppliers actually screened. STARS reports the existence of the criteria, not their application to any supplier, so no percentage can be derived. The denominator is bid solicitations, not new suppliers, and one solicitation may attract many suppliers or none. 'Sustainability considerations' is also broader than the environmental criteria GRI 308-1 specifies. The figure is 0 percent at TU Dublin, so a low value here should not be read as a screening failure without checking the product-specification field alongside it.

Disclosure	Status	Value / reason	Notes
308-2 Negative environmental impacts in the supply chain and actions taken	Not reported	No STARS data exists for this disclosure.	

GRI 401: Employment 2016

Disclosure	Status	Value / reason	Notes
401-1 New employee hires and employee turnover	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no hiring or turnover figures.
401-2 Benefits provided to full-time employees that are not provided to temporary or part-time employees	Partially reported	Percentage of employees eligible for paid all-gender family/medical leave: 100	GRI 401-2 turns on the contrast between full-time employees and temporary or part-time employees, and asks for the benefits by significant location of operation. STARS gives a single institution-wide eligibility rate with no employment-type split, so the comparison the disclosure exists to make cannot be drawn.
401-3 Parental leave	Partially reported	Number of weeks of paid maternity leave: 26 Narrative and/or website URL providing an overview of the maternity leave options available to employees: The Maternity Protection Acts cover the entitlements for allstaff who are pregnant, hav...	GRI 401-3 requires headcounts by gender: employees entitled to parental leave, those who took it, those who returned, those still employed twelve months later, and the resulting return-to-work and retention rates. STARS reports none of these — it reports the policy, not its uptake. 'Maternity' is also narrower than GRI's 'parental'. Descriptive only; supplies none of the headcounts or rates GRI 401-3 requires.

GRI 403: Occupational Health and Safety 2018

Disclosure	Status	Value / reason	Notes
403-1 Occupational health and safety management system	Partially reported	Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	STARS never asks the 403-1 question, so an answer only appears where the institution volunteered it. Nothing records whether the system exists because of a legal requirement, which standard it follows, or which workers, activities and workplaces it covers — that is 403-1-b, and it is absent.
403-2 Hazard identification, risk assessment, and incident investigation	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
403-3 Occupational health services	Partially reported	Does the institution make physical health services available to employees?: Yes	General employee health services are not occupational health services: GRI 403-3 is about the function that identifies and eliminates workplace hazards, and about how worker health data is kept confidential. STARS asks about neither.
403-4 Worker participation, consultation, and communication on occupational health and safety	Reported	Does the institution have an institution-wide health and safety committee or network of committees that brings together workers and management in the development and review of workplace health and safety policies and procedures?: Yes Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	GRI 403-4-b further requires the committee's responsibilities, meeting frequency, decision-making authority, and whether any workers are unrepresented. STARS records existence only. Depth varies by institution; meeting frequency and decision-making authority are not consistently stated.
403-5 Worker training on occupational health and safety	Not reported	No STARS data exists for this disclosure.	
403-6 Promotion of worker health	Reported	Does the institution make physical health services available to employees?: Yes Does the institution make behavioral health services available to employees?: Yes Does the institution make free or reduced cost fitness activities available to employees?: Yes Does the institution prohibit smoking and tobacco use across the entire campus?: Yes Does the institution make contemplative and/or spiritual activities available to employees?: Yes	GRI 403-6-a also requires the scope of access provided; STARS records availability as a yes/no, with the scope left to the narrative. A prohibition is a control rather than a voluntary promotion service; STARS also records the weaker variants (indoor-only, restricted outdoor smoking) in separate fields.
403-7 Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Not reported	No STARS data exists for this disclosure.	
403-8 Workers covered by an occupational health and safety management system	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
403-9 Work-related injuries	Not reported	No STARS data exists for this disclosure.	PA-11 (Health, Safety and Wellbeing) contains no injury figures - its only numeric fields are STARS scoring artefacts. Cannot be reported.
403-10 Work-related ill health	Not reported	No STARS data exists for this disclosure.	PA-11 contains no ill-health figures. Cannot be reported.

GRI 405: Diversity and Equal Opportunity 2016

Disclosure	Status	Value / reason	Notes
405-1 Diversity of governance bodies and employees	Reported	Ethnic diversity index for executive staff: 0 Revised on Nov. 24, 2025 Percentage of executive staff that identify as women or other marginalized gender identities: 41.09 Percentage of regular/permanent academic staff that identify as women or other marginalized gender identities: 41.55 Percentage of regular/permanent non-academic staff that identify as women or other marginalized gender identities: 56.40 Ethnic diversity index for academic staff: 0 Revised on Nov. 24, 2025 Ethnic diversity index for non-academic staff: 0 Revised on Nov. 24, 2025	This is a diversity INDEX (a single 0-1 concentration score), not the percentage breakdown GRI 405-1-b asks for. It shows how mixed the group is, not what share each group holds. No STARS credit collects employee age at all, so GRI 405-1's age-group split (under 30 / 30-50 / over 50) is unanswerable for every employee category. 405-1-a is still not answered: STARS PA-3 records which constituencies are represented on the highest decision-making body, never what percentage of that body they make up. DATA QUALITY: TU Dublin's value is the string '0 Revised on Nov. 24, 2025' — annotation text concatenated onto the figure — so the field is typed <code>text</code>, not <code>number</code>, and will not parse. Cork and Berkeley are clean. STARS reports one combined figure for 'women or other marginalized gender identities' rather than a percentage per gender, so the split GRI asks for is two buckets, not three.

Disclosure	Status	Value / reason	Notes
405-2 Ratio of basic salary and remuneration of women to men	Not reported	No STARS data exists for this disclosure.	STARS FIELDS: nothing. PA-13 covers living-wage coverage and wage floors, not a gender pay ratio — despite the credit being named 'Pay Equity'. BUT the evidence documents linked from STARS answers partially close this: UCC publishes V3EDIGenderPayGapReport2025.pdf and TU Dublin Gender-Pay-Gap-Report-2023-FINALv1.pdf, both stating a mean gender pay gap. Berkeley links no equivalent. NOT a substitute for 405-2: GRI wants the ratio of basic salary and remuneration of women to men PER EMPLOYEE CATEGORY and per significant location; these reports give one organisation-wide percentage. Reportable as context with the source named, for 2 of 3 institutions, and it must be read out of the PDF by a human — it is not in any structured field, so it cannot go through the Jinja2 number path.

Verifying this report

Every figure above is recorded in `report/output/index_provenance.csv` with the exact STARS credit and field it came from, so any number can be traced to a row of the source dataset without trusting the generator. `tests/test_content_index.py` re-derives them independently of the code that produced them.
