

Sustainability Report — Technological University Dublin

Prepared **with reference to** the GRI Standards · compiled 2026-08-30

About this report. It is generated from Technological University Dublin's public AASHE STARS 3.0 submission, mapped onto the GRI Standards. It covers 78 GRI disclosures across 13 standards. Where a disclosure cannot be answered from STARS data, the report says so and why, rather than omitting the question. **How the figures got here — and why they can be trusted.** Every number in this document was copied by code from the extracted STARS dataset. The language model that wrote the prose was never shown a figure: it wrote named placeholders and the values were substituted afterwards, so it could not alter, round or invent one. After substitution the finished text is scanned, and the build fails if any number in it cannot be traced back to the source data. The model chose the sentences; it did not choose the numbers. **What that guarantee does not cover.** It applies to figures. Qualitative statements are drawn from the institution's own STARS narrative answers, but no mechanical check confirms that a sentence describing them is faithful. **"With reference to", not "in accordance with".** GRI reserves *in accordance* for reports answering every Universal Disclosure plus all disclosures for each material topic. This report does not, so it makes the weaker and correct claim. **Source and attribution.** [Technological University Dublin STARS Report](<https://reports.aashe.org/institutions/technological-university-dublin-dublin/report/2024-12-02/>), AASHE. STARS data is publicly accessible and used here with attribution to AASHE; it is not openly licensed.

The organisation and its reporting

Organizational Profile and Reporting Boundary

Technological University Dublin (TU Dublin) is a public higher education institution based in Ireland. The institutional boundary defined for this sustainability report encompasses operations across the City, Tallaght, and Blanchardstown campuses. The City campus encompasses multiple sites, including Grangegorman, Bolton Street, Aungier Street, and other facilities situated in Dublin city centre.

The reporting boundary covers all university estates, buildings, operational functions, academic and non-academic staff, students, research hubs, and institutional outputs captured in Scopus and the university repository, Arrow. Operational activities covered within this physical footprint include an agricultural school. Data collection and validation were coordinated across the institution under the leadership of the Head of Sustainability Intelligence, Dr Philippe Lemarchand, and Sustainability Intelligence Data Analyst, Dr Zeyan Zhao, with contributions from personnel across multiple university functions.

Reporting Period and External Assurance

The reporting period for Scope 1 and Scope 2 greenhouse gas emissions is defined by the performance year 2023.

In relation to Disclosure 2-5, no independent external assurance or external audit was conducted for the information presented in this report.

Reporting Limitations

Several disclosures required by the GRI Standards cannot be fully addressed due to the data boundaries of the primary data source: - **GRI 2-1:** Legal entity details, headquarters location, and specific countries of operation are omitted, as the primary data collection framework records submission metadata rather than these institutional fields. - **GRI 2-2:** The report does not clarify whether the entities included in sustainability reporting differ from those in the institution's financial statements, nor how minority interests are consolidated. - **GRI 2-3:** Specific contact details for public enquiries, overall reporting frequency, and publication dates are not captured; named leads are recorded without direct contact information. - **GRI 2-4:** Restatements of information from prior reporting periods are not reported, as submissions operate as independent snapshots without comparative linkages to previous datasets. - **Disclosure 2-5:** Detailed metadata regarding external assurance—such as assurance standards, obtained levels of assurance, process limitations, and provider relationships—is omitted because external verification was not undertaken. - **GRI 2-6:** While physical campus features such as the agricultural school are noted, complete details regarding downstream value chains, service markets, and supply chain boundaries are not reported.

Activities and workers

Workforce Size and Composition

Technological University Dublin records its total operational workforce using full-time equivalent (FTE) metrics. Under the STARS framework, the university reports a total workforce capacity of 2,404 FTE employees across its academic, administrative, and operational divisions.

Reporting Limitations and Exclusions

The current data capture presents several limitations when benchmarked against GRI requirements:

- **GRI 2-7 (Employees):** The reported FTE figure does not constitute a total headcount, as part-time contracts are aggregated into full-time equivalents. Furthermore, the source framework provides a single undifferentiated figure and does not capture required disaggregations by gender, region, employment contract (permanent versus temporary), or employment type (full-time versus part-time).

- **GRI 2-8 (Workers who are not employees):** The institution does not report data on non-employee workers whose work is directly controlled by the university, nor their contractual arrangements. Institutional records monitor direct employee FTE and student totals, alongside counts of contracting firms rather than the individual personnel working under those contracts.

Material topics

Topic Identification and Framework

Technological University Dublin aligns its sustainability reporting with the Sustainability Tracking, Assessment & Rating System (STARS), a sector-specific framework developed by the Association for the Advancement of Sustainability in Higher Education (AASHE). The university has established measurable sustainability objectives across the core operational and academic areas defined within the STARS credit set: campus operations; teaching, learning, and research; racial equity and social justice; administration and finance; and campus and community engagement.

Because these areas are derived directly from the standardised STARS credit set designed for higher education, the university did not perform its own materiality assessment and cannot describe one. The selected topics reflect the structured criteria of the external framework rather than an internal determination of material impacts.

Management of Sustainability Topics

Management of these sustainability areas is delivered through university-wide strategic planning and dedicated administrative structures, fulfilling Disclosure 3-3 through an institution-wide approach.

Operational sustainability targets are embedded within the university's strategic plan. These operational objectives focus on lowering greenhouse gas emissions and improving energy efficiency to support national climate action targets set for public sector bodies. Executive responsibility for campus operations rests with the Vice-President of Sustainability, supported by dedicated project leadership.

In education and research, management is led by the Sustainability Education team, which oversees curriculum transformation and staff development. AASHE recognises the institution as a Centre for Sustainability Across the Curriculum in Europe. Specific initiatives driving these objectives include a dedicated sustainability education framework, the University Education Model, participation in Sulitest, the creation of a Sustainability Toolkit, collaboration with UNITAR, and SATLE project funding. Institutional targets require staff and students to engage in sustainability education and training, supporting the university's aim to secure a STARS rating.

Reporting Limitations and Omissions

Reporting against GRI standards in this section is subject to several specific limitations:

For GRI 3-1, the university does not report a formal process for identifying, prioritising, or consulting on material impacts, as the topic set is predetermined by the STARS framework.

For Disclosure 3-2, the covered topics represent predefined STARS credit areas rather than an institution-specific materiality determination. Additionally, changes in material topics compared to previous reporting periods are not reported.

For Disclosure 3-3, management approaches are documented at the institutional level rather than topic by topic. The source material records progress and strategic outcomes, but does not distinguish actions that prevent potential harm from those that remediate actual harm, nor does it specify direct versus indirect impact involvement across business relationships or capture formal lessons learned.

Governance

Governance Structure and Composition

The highest decision-making body at Technological University Dublin is the Governing Body. In accordance with GRI 2-9, representation on this body includes academic staff, non-managerial staff, and students. Academic staff representatives hold voting rights on the Governing Body.

Delegation of Responsibility for Managing Impacts

Under Disclosure 2-13, overall responsibility for managing sustainability impacts across the institution is delegated to executive and operational roles. Technological University Dublin maintains a Vice President of Sustainability, who provides strategic direction, governance, and management for campus-wide sustainability activities.

Sustainability oversight is organized across four core functions: Sustainability Education, Decarbonisation, Sustainability Intelligence, and Societal Engagement, each led by a head of function. Institutional activities are further supported by a dedicated sustainability project group comprising project managers, innovation leads, and Green-Campus co-chairs. Operational departments, including Campus & Estates, collaborate with executive leadership to implement environmental policies, energy action plans, and sustainability standards.

Role in Sustainability Reporting and Compensation

In relation to GRI 2-14, executive endorsement of the institution's sustainability disclosures is documented through an executive letter accompanying the submission.

Regarding executive compensation under GRI 2-21, the institution tracks the pay ratio between senior leadership and workers. The factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee is 8.08.

Reporting Limitations and Exclusions

The institutional data source presents specific reporting limitations across several standard disclosures: - Under GRI 2-9, while constituency representation is documented, the dataset does not report numerical breakdowns for member independence, tenure, executive status, gender composition, or representation of under-represented social groups. - Under GRI 2-13, the source confirms executive sustainability oversight but does not record the formal reporting lines or the frequency of progress reports delivered to the Governing Body. - Under GRI 2-14, senior executive endorsement is recorded, but the data does not clarify whether the Governing Body directly reviewed, formally approved, or endorsed the material sustainability topics. - Under GRI 2-21, the ratio measures the difference between the highest-paid administrator and the lowest-paid full-time employee, whereas standard GRI 2-21 metrics compare executive compensation to the median pay of all other employees.

The reporting source does not provide information to address the following governance disclosures: - GRI 2-10: Criteria and processes for nominating and selecting members of the highest governance body. - GRI 2-11: Whether the chair of the highest governance body is a senior executive, and how potential conflicts of interest are managed. - GRI 2-12: The role of the highest governance body in overseeing environmental and social due diligence, stakeholder engagement, and impact management. - GRI 2-15: Processes for preventing, mitigating, and disclosing conflicts of interest within governance structures. - GRI 2-16: Protocols for communicating critical concerns to the highest governance body, as well as the total number of concerns raised. - GRI 2-17: Measures taken to advance the collective sustainable development knowledge of the highest governance body. - GRI 2-18: Formal processes for evaluating the performance of the highest governance body in overseeing sustainability. - GRI 2-19 and GRI 2-20: Policies and formal decision-making processes governing remuneration for senior executives and members of the highest governance body.

Strategy, policies and practices

Strategic Vision and Policy Commitments

Technological University Dublin frames its sustainability vision around a commitment to establishing an equitable, sustainable, and environmentally responsible institution. This vision is articulated across several core strategic documents, including its Strategic Intent plan, Sustainability Strategy, Climate Action Roadmap, and regular progress reports on the United Nations Sustainable Development Goals. Strategic leadership for climate action and sustainability governance is provided by a Vice President for Sustainability, who oversees implementation across functional areas including sustainability education and campus decarbonisation.

To fulfil Disclosure 2-22, GRI standards require a strategic statement signed by the highest governance body or most senior executive. The institutional records set out the strategic vision but do not attribute it to a named signatory.

Under Disclosure 2-23, public policy commitments are recorded where they carry formal reporting requirements. These published plans establish broad organizational goals. They do not explicitly state commitments to human rights frameworks, the UN Guiding Principles, or dedicated due diligence processes, nor do the records capture commitments that lack mandatory reporting obligations.

Embedding Policies across Operations

The institution embeds environmental and social expectations into its supply chain through a published supplier code of conduct. For internal operations, annual sustainability training opportunities are provided for non-academic personnel. Curriculum transformation and staff upskilling are driven by a dedicated sustainability education team, which coordinates an institutional toolkit, strategic educational models, and international academic partnerships.

With respect to Disclosure 2-24, the available material records operational achievements and training availability, but does not detail internal allocations of responsibility, procedural integration into routine operations, or the management of policy commitments throughout business relationships. Furthermore, employee training disclosures focus on general sustainability topics for non-academic staff rather than training on specific policy commitments for all workforce categories.

Grievance Resolution and Mechanisms for Concerns

Processes for resolving grievances and protections for whistleblowers are published and accessible to employees. Human rights, employee protections, and advisory mechanisms are integrated through internal human resources policies, union representation, and national workplace relations bodies, aligned with the European Convention on Human Rights.

For Disclosure 2-25 and Disclosure 2-26, the institution confirms that information on grievance resolution and whistleblower protections is published for staff. The records do not describe the operational steps of these mechanisms, their usage rates, or their evaluated effectiveness. Additionally, while Disclosure 2-25 and Disclosure 2-26 cover all impacted stakeholders and individuals in business relationships, the available disclosures relate strictly to internal employees.

Membership Associations and Regulatory Compliance

Regarding Disclosure 2-28, institutional endorsements of external sustainability charters and frameworks are recorded within strategic planning commitments. However, signing formal charters is distinct from holding organizational memberships in external associations, which are not tracked in the source material.

Under Disclosure 2-27, institutions must report significant instances of non-compliance with laws and regulations, along with any associated monetary fines or sanctions.

Technological University Dublin does not collect regulatory compliance or enforcement data within this reporting framework, and no compliance metrics are reported.

Stakeholder engagement

Student Consultation

Technological University Dublin engages students in university decision-making, planning, and policy formulation through direct representation on standing bodies, working groups, and regular university surveys. Student representation is primarily coordinated through the Students' Union. Standing university committees and governance structures with active student involvement include the University Student Committee, the Green Campus committee, the Student Finance Committee, the Research Ethics Committee, and the EUt+ Governing Body.

Staff Consultation

Academic staff are consulted on institutional policies, resource allocation, and strategy through multiple governance committees and formal channels. The University Executive Team includes academic Deans to ensure academic leadership is reflected in resource allocation decisions. Academic staff participate in decisions through Faculty and School Boards, as well as academic quality assurance mechanisms such as the Academic Quality Assurance and Enhancement Committee. Furthermore, academic staff are represented by a trade union that is formally consulted on relevant operational and strategic matters as a social partner.

Community Engagement

The university maintains ongoing channels and standing arrangements that enable non-affiliated, community-based organisations to participate in institutional governance. Ad hoc mechanisms and project-level consultations are also deployed for local community engagement. For example, community members have direct input into decarbonisation planning through collaboration between local groups—such as the Stoneybatter Sustainable Energy Community—and university departments, including TU Dublin Estates and Campus Planning, Decarbonisation and Sustainability Intelligence, alongside the Grangegorman Development Agency. This collaboration explores the provision and distribution of renewable energy from the Grangegorman geothermal project through a district heating network. Broader public and community engagement is additionally supported through research impact frameworks and community engagement pilots across academic faculties.

Reporting Limitations and Omissions

In accordance with GRI 2-29, comprehensive reporting requires details on how stakeholders are identified and how the organisation ensures that engagement is meaningful. The reporting framework utilised here focuses on specific internal and local

constituencies, omitting systematic coverage of suppliers, commercial customers, or vulnerable groups. Data limitations also affect the detail available for certain student consultation mechanisms.

Regarding GRI 2-30, the institution does not report the percentage of total employees covered by collective bargaining agreements. Available data frameworks record policies on freedom of association and living wages for contractors, but do not track overall employee collective bargaining coverage.

Environmental performance

Energy Consumption and Intensity

Total annual energy consumption within the institution (GRI 302-1) stands at 38,391 Megawatt-hours Megawatt-hours. Electricity consumption accounts for 15,053 Megawatt-hours Megawatt-hours, while total stationary fuel consumption equals 21,072 Megawatt-hours Megawatt-hours. Off-site thermal energy sources supply 2,266 Megawatt-hours Megawatt-hours of heating and cooling, which includes recovered waste heat from an AWS data centre serving the Tallaght campus.

By fuel type, stationary fuel consumption comprises 21,056 Megawatt-hours Megawatt-hours of natural gas, 16 Megawatt-hours Megawatt-hours of heating oil, 0 Megawatt-hours Megawatt-hours of coal/coke, and 0 Megawatt-hours Megawatt-hours of propane/LPG. Annual renewable energy consumption totals 8,397.21 Megawatt-hours Megawatt-hours, of which 0.21 Megawatt-hours Megawatt-hours is derived from renewable stationary fuels. The university exported 0 Megawatt-hours Megawatt-hours of on-site generated renewable electricity.

Under Disclosure 302-3, energy intensity is reported as 1,520.74 Kilowatt-hours Kilowatt-hours per person (calculated across full-time equivalent students and staff) and 182.05 Kilowatt-hours per square meter Kilowatt-hours per square metre of gross floor area.

Reporting standard note: GRI 302-1 requires energy consumption to be reported in joules; figures reported here in Megawatt-hours require conversion for standard GRI alignment.

Water Withdrawal and Stewardship

The university's main campus is located in a geographic region categorized as having medium-high physical water quantity risk. To manage on-site resources, rainwater harvesting systems are operational across institutional premises.

Total water withdrawal (GRI 303-3) is 56,570 Cubic meters cubic metres. Third-party off-site municipal sources supply 56,570 Cubic meters cubic metres of potable water, while on-site potable sources supply 0 Cubic meters cubic metres.

Reporting standard note: GRI 303-3 requires water quantities to be expressed in megalitres. Figures provided in cubic metres require conversion by dividing by a factor of one thousand.

Greenhouse Gas Emissions

Emissions inventories are calculated in accordance with the GHG Protocol Corporate Standard using energy utility records, SEAI Monitoring and Reporting data, fleet vehicle logs, and national conversion factors. A baseline period of 2018 was established to provide a consistent pre-pandemic reference benchmark, recording 10,064 Metric tons of CO₂ equivalent metric tons of CO₂ equivalent in baseline Scope 1 and Scope 2 emissions.

Direct Scope 1 GHG emissions (GRI 305-1) total 3,728 Metric tons of CO₂ equivalent metric tons of CO₂ equivalent from stationary combustion, 2 Metric tons of CO₂ equivalent metric tons from mobile combustion, 55 Metric tons of CO₂ equivalent metric tons from fugitive emissions, and 0 Metric tons of CO₂ equivalent metric tons from process emissions. Total combined Scope 1 emissions were left unstated in the source inventory submission.

Indirect Scope 2 GHG emissions (GRI 305-2) comprise 0 Metric tons of CO₂ equivalent metric tons of CO₂ equivalent from off-site electricity (location-based) and 181 Metric tons of CO₂ equivalent metric tons from off-site heating and cooling. Total combined Scope 2 emissions were left unstated in the source inventory submission.

Other indirect Scope 3 GHG emissions (GRI 305-3) cover 410 Metric tons of CO₂ equivalent metric tons of CO₂ equivalent from business travel, 10,694 Metric tons of CO₂ equivalent metric tons from commuting, 26,269 Metric tons of CO₂ equivalent metric tons from purchased goods and services, 83 Metric tons of CO₂ equivalent metric tons from capital goods, 9 Metric tons of CO₂ equivalent metric tons from operational waste generation, and 0 Metric tons of CO₂ equivalent metric tons from fuel- and energy-related activities not captured under Scope 1 or Scope 2.

Emissions intensity metrics (GRI 305-4) record 354.84 Kilograms of CO₂ equivalent kilograms of CO₂ equivalent per person and 42.48 Kilograms per square meter kilograms of CO₂ equivalent per square metre of gross floor area. Under Disclosure 305-5, the reduction in Scope 1 and Scope 2 GHG emissions relative to the baseline year is 10.99%.

Waste Management and Circularity

Waste totals represent non-hazardous operational waste and construction activities. Under Disclosure 306-3, annual non-hazardous operational waste generated equals 1,768.85 Metric tons metric tons, alongside 1,244.08 Metric tons metric tons of construction and demolition waste.

Non-hazardous waste diverted from disposal (GRI 306-4) totals 1,452.64 Metric tons metric tons, consisting of 691.73 Metric tons metric tons recycled, 56.01 Metric tons metric tons composted, and 704.90 Metric tons metric tons prepared for reuse. Diverted

construction and demolition waste totals 1,121.85 Metric tons metric tons, of which 531.95 Metric tons metric tons is recycled.

Waste directed to disposal (GRI 306-5) through landfill or incineration includes 316.21 Metric tons metric tons of non-hazardous waste and 122.23 Metric tons metric tons of construction and demolition waste.

Operational stewardship measures include a central surplus equipment programme for institutional asset storage, sale, or internal reuse; donation schemes for personal items; hazardous material reduction protocols; and the elimination of single-use disposable plastics across food services in favour of certified compostable bioplastics and paper products.

Supplier Environmental Assessment

Under Disclosure 308-1, 0% of bid solicitations explicitly incorporate supplier sustainability criteria. Procurement policies are governed by a supplier code of conduct containing environmental provisions that exceed statutory regulatory requirements.

Data Limitations and Omissions

The source submission contains the following reporting gaps against standard GRI disclosures: - GRI 301-1, Disclosure 301-2, and Disclosure 301-3 are not applicable as the institution does not manufacture physical products. - GRI 302-2 (value-chain energy consumption) and GRI 302-4 (joule-denominated energy reductions) are not tracked. - GRI 303-2 (effluent discharge quality standards) and exact hazardous waste tonnages under Disclosure 306-3, Disclosure 306-4, and Disclosure 306-5 are unquantified. - GRI 305-6 (ozone-depleting substances) and GRI 305-7 (NOx, SOx, and air emissions) are omitted. - GRI 308-2 (supplier negative environmental impact assessments and corrective actions) is not reported.

Social and economic performance

Pay and Employment Conditions

Technological University Dublin records a wage floor for regular and permanent employees of 16.53, set against a local living wage benchmark of 13.85. Overall, 100 of employees receive remuneration equivalent to or exceeding this living wage baseline. Figures are denominated in local currency (EUR). These metrics are reported as a higher-education sector variant; Disclosure 202-1 is not fully satisfied because entry-level wages are evaluated against a living wage benchmark rather than the local statutory minimum wage, and ratios broken down by gender are not collected.

Regarding employee leave and benefits, 100 of employees are eligible for paid all-gender family or medical leave. Under statutory protections, pregnant employees—inclusive of transgender males holding a gender recognition certificate—are entitled to 26 consecutive weeks of paid maternity leave. In terms of GRI reporting alignment,

Disclosure 401-2 requires a contrast between benefits provided to full-time employees and those offered to temporary or part-time staff across operating locations, which is not captured in the aggregated eligibility percentage. Additionally, Disclosure 401-3 requires headcounts of parental leave entitlement, uptake, return, and retention rates disaggregated by gender, whereas available institutional data reflects policy eligibility rather than uptake statistics.

Occupational Health and Safety

The institution manages workplace safety through an integrated governance structure. The University Safety, Health and Welfare Steering Committee, alongside campus-level safety committees and designated working groups, oversees compliance, policy implementation, and worker consultation.

Physical and behavioural health services are accessible to employees. Broader health promotion initiatives include access to free or reduced-cost fitness facilities and contemplative spaces. Smoking and tobacco use are prohibited across campus grounds.

In relation to GRI standards, Disclosure 403-1 and Disclosure 403-4 are partially addressed; institutional reporting confirms safety committee existence and joint worker-management representation, but omits explicit management system standard certifications, meeting frequencies, and decision-making mandates. Physical and behavioural health offerings reported under Disclosure 403-3 and Disclosure 403-6 represent general employee wellness services rather than dedicated occupational hazard identification functions or health data confidentiality protocols.

Diversity and Governance

Workforce diversity indicators show that women or individuals with other marginalised gender identities represent 41.09 of executive staff, 41.55 of regular and permanent academic staff, and 56.40 of regular and permanent non-academic staff. Diversity and inclusion measures include targeted leadership development opportunities and institutional alignment with the Athena SWAN framework.

Disclosure 405-1 is partially fulfilled. The reported gender metrics combine women and marginalised gender identities into a single proportion rather than distinct gender categories, and the percentage breakdown of governance body members is not reported. Employee age group distributions are also unrecorded across all staff categories. Institutional data for ethnic diversity indices contains formatting irregularities in the source reporting and is omitted.

Summary of Omissions and Limitations

The university does not track or report data for several disclosures under the GRI Standards. On local economic impacts and procurement, GRI 202-2 (proportion of senior management hired from the local community) and GRI 204-1 (spend on local suppliers)

are omitted; recorded metrics on social impact procurement assess social enterprise criteria rather than local geographical vendor status.

Regarding workforce dynamics, GRI 401-1 (new employee hires and turnover counts) and Disclosure 405-2 (ratio of basic salary and remuneration of women to men) are not reported. Within occupational health and safety, data is absent for GRI 403-2 (hazard identification, risk assessment, and incident investigation processes), GRI 403-5 (worker safety training), GRI 403-7 (prevention of safety impacts across supply relationships), GRI 403-8 (number of workers covered by audited or certified safety systems), GRI 403-9 (work-related injuries), and GRI 403-10 (work-related ill health).

GRI content index

Reported	Partially reported	Not reported	Not assessed
25	16	37	0

“With reference to”, not “in accordance with.” GRI reserves in accordance for reports answering every Universal Disclosure (GRI 2) plus all disclosures for each material topic. This report does not, so it uses the weaker and correct claim.

GRI 2: General Disclosures 2021

Disclosure	Status	Value / reason	Notes
2-1 Organizational details	Reported	Institutional control: Public	GRI 2-1 also requires the legal name, the location of headquarters and the countries of operation. STARS carries none of these as fields — they are report metadata, not credit data.
2-2 Entities included in the organization’s sustainability reporting	Reported	Narrative outlining the institutional boundary used to complete this report: TU Dublin consists of three campuses, namely City, Tallaght, and Blanchardstown. The Ci...	GRI 2-2-b/c additionally ask whether the reporting entities differ from those in the financial statements and how minority interests are consolidated. STARS asks neither.

Disclosure	Status	Value / reason	Notes
2-3 Reporting period, frequency and contact point	Partially reported	Performance year for scope 1 and 2 GHG emissions: 2023 List of personnel who led the reporting process: Dr. Philippe Lemarchand - Head of Sustainability Intelligence Dr Zeyan Zhao - Data Anal...	STARS has no single reporting period, and the per-credit years diverge inside one submission: Cork's credits run from 2023 (construction waste) to 2025 (living wage, investment), Berkeley's from 2023 to 2024. Only TU Dublin is uniform, at 2023. Any single period stated for a GRI report built on this data would be wrong for some of its figures. GRI 2-3 also requires the reporting frequency, the publication date and a contact point; STARS collects none of these. Named preparers are not a designated contact point: STARS records names and roles without contact details, and does not say who should receive enquiries.
2-4 Restatements of information	Not reported	No STARS data exists for this disclosure.	STARS v2.2 and earlier scored Operations credits against the institution's own baseline and v3.0 scores against a peer group, so cross-version figures are not comparable in the first place — see CLAUDE.md 6.4.

Disclosure	Status	Value / reason	Notes
2-5 External assurance	Reported	Were any independent audits or external assurance processes used in the preparation of this report?: No	GRI 2-5 additionally requires the assurance standard used, the level of assurance obtained, the limitations of the process and the relationship with the assurance provider. STARS captures none of these; the free-text field is optional and unstructured. Only populated where the institution answered yes to the assurance question, so it is absent for most submissions. Not populated by this institution: PRE-4 / Narrative outlining the independent audits or external assurance processes used in the preparation of this report.
2-6 Activities, value chain and other business relationships	Partially reported	Which of the following features are included within the institutional boundary?: Agricultural school	GRI 2-6 asks for the sectors the organization is active in, its value chain, its products and services and the markets served. A list of campus features covers only the activities, and only those with a physical footprint.
2-7 Employees	Partially reported	Full-time equivalent of employees: 2,404	FTE is not a headcount: two half-time staff count as one. GRI 2-7 further requires the breakdown by employment contract (permanent / temporary), by employment type (full- / part-time), by gender and by region. STARS collects a single undifferentiated figure.
2-8 Workers who are not employees	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-9 Governance structure and composition	Reported	Are one or more academic staff representatives included as members of the institution's highest decision-making body?: Yes Are one or more staff members representing non-managerial workers included as members of the institution's highest decision-making body?: Yes Are one or more student representatives included as members of the institution's highest decision-making body?: Yes Narrative and/or website URL outlining academic staff representation on the institution's highest decision-making body: TU Dublin's highest decision-making body is Governing Body. This includes both student ...	GRI 2-9 also requires the number of executive and non-executive members, their independence, tenure, other significant positions held, and composition by gender and under-represented social group. STARS records only whether each constituency is represented. See the caveat on the academic-staff row: representation is recorded, composition is not. See the caveat on the academic-staff row. Free text of variable depth; it is not a substitute for the numeric composition GRI 2-9-c requires.
2-10 Nomination and selection of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-11 Chair of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-12 Role of the highest governance body in overseeing the management of impacts	Not reported	No STARS data exists for this disclosure.	
2-13 Delegation of responsibility for managing impacts	Reported	Does the institution have one or more sustainability officers?: Yes Is at least one of the institution's sustainability committees, officers, or offices charged with coordinating various campus constituencies in the advancement of sustainability across the entire institution?: Yes Narrative and/or website URL providing an overview of the institution's sustainability officers: TU Dublin has a VP of Sustainability, Jennifer Boyer, who is governing 4 sustainability...	GRI 2-13-b also requires whether and how often those executives report to the highest governance body. STARS does not ask. See the caveat on the sustainability-officer row. Free text; the reporting line to the highest governance body is not consistently stated.

Disclosure	Status	Value / reason	Notes
2-14 Role of the highest governance body in sustainability reporting	Partially reported	Executive cover letter: TU_Dublin_Executive_letter_STARS_Application_2024.pdf	Endorsement by a senior executive is not review and approval by the highest governance body, and STARS records neither who approved the content nor whether material topics were reviewed. The field value is an attachment filename, so the letter's text is not in the dataset.
2-15 Conflicts of interest	Not reported	No STARS data exists for this disclosure.	
2-16 Communication of critical concerns	Not reported	No STARS data exists for this disclosure.	
2-17 Collective knowledge of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-18 Evaluation of the performance of the highest governance body	Not reported	No STARS data exists for this disclosure.	
2-19 Remuneration policies	Not reported	No STARS data exists for this disclosure.	
2-20 Process to determine remuneration	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-21 Annual total compensation ratio	Partially reported	The factor by which the compensation of the highest compensated senior administrator exceeds that of the lowest compensated full-time employee: 8.08	The denominator differs and the difference is large. GRI 2-21 divides the highest-paid individual by the MEDIAN of all other employees; STARS divides the highest-paid senior administrator by the LOWEST-paid full-time employee. The STARS figure is therefore a top-to-bottom spread, not a top-to-typical ratio, and is not comparable with any GRI 2-21 figure published elsewhere. IL-62 is also an Innovation & Leadership bonus credit, so it is optional: only TU Dublin reports it (8.08); Berkeley and Cork leave it blank.
2-22 Statement on sustainable development strategy	Partially reported	Narrative detailing the institution's guiding vision or goals for sustainability and the plan(s) in which they are published: TU Dublin's sustainability vision is centered around its commitment to creating a susta...	GRI 2-22 requires the statement to come from the highest governance body or the most senior executive. STARS records the institution's published vision without attributing it to a named signatory, so the authorship the disclosure turns on is absent.
2-23 Policy commitments	Reported	Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	GRI 2-23 specifically requires commitments to respect human rights, to the UN Guiding Principles and to due diligence. A sustainability commitment is broader and does not imply any of these. STARS asks only for commitments carrying a reporting requirement, so commitments without one are out of scope of the field.

Disclosure	Status	Value / reason	Notes
2-24 Embedding policy commitments	Reported	Does the institution have a published code of conduct to guide suppliers on the institution's social and environmental expectations for them?: Yes Does the institution make available sustainability-focused training opportunities to non-academic staff on at least an annual basis?: Yes Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform...	GRI 2-24 also requires how responsibility is allocated internally and how the commitments are embedded in strategies and procedures. STARS asks about non-academic staff only, and about sustainability training generally rather than training on the specific commitments. It describes outcomes, not the allocation of responsibility, the integration into procedures, or the handling of commitments through business relationships that GRI 2-24-a enumerates.
2-25 Processes to remediate negative impacts	Partially reported	Does the institution publish information on grievance resolution in a format that is accessible to all employees?: Yes	STARS records only that the information is published — not how the mechanism operates, who may use it, or its effectiveness — and covers employees only, where GRI 2-25 covers all affected stakeholders.
2-26 Mechanisms for seeking advice and raising concerns	Reported	Does the institution publish information on whistleblower protections in a format that is accessible to all employees?: Yes Narrative and/or website URL providing an overview of the institution's published measures to protect employee rights: This is a legal obligation covered by Article 11 of the European Convention on Human Ri...	STARS records publication, not a description of how the mechanism operates, and covers employees only. GRI 2-26 extends to all individuals, including those in business relationships. Employees only; see the caveat on the whistleblower row.
2-27 Compliance with laws and regulations	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
2-28 Membership associations	Partially reported	Narrative and/or website URL outlining the institution's external sustainability commitments that include a reporting requirement: The following URL and documents highlight our sustainability commitments that include r...	Signing a charter is not membership of an association, and STARS restricts the field to commitments carrying a reporting requirement. The institution's association memberships are not collected as such.
2-29 Approach to stakeholder engagement	Reported	Description of other mechanisms used to consult students on institutional decisions, plans, or policies: Students in TU Dublin sit on a wide variety of formal committees, working groups, and e... Description of other mechanisms used to consult academic staff on institutional decisions, plans, or policies: The University committee that decides on resource allocation is the University Executiv... Narrative and/or website URL outlining the ad hoc mechanisms used during the previous three years to consult local community members on institutional decisions, plans, or policies: The Stoneybatter SEC "Cosybatter" is engaged with the Grangegorman Development Agency (...) Does the institution have one or more ongoing bodies through which local community-based organizations not affiliated with the institution can democratically participate in its governance?: Yes	GRI 2-29 also asks how stakeholders are identified and how the organization ensures the engagement is meaningful. STARS asks about four fixed constituencies and does not cover suppliers, customers or vulnerable groups. See the caveat on the student-consultation row.
2-30 Collective bargaining agreements	Not reported	No STARS data exists for this disclosure.	

GRI 3: Material Topics 2021

Disclosure	Status	Value / reason	Notes
3-1 Process to determine material topics	Not reported	No STARS data exists for this disclosure.	This is a structural difference, not missing data. AASHE determined materiality for the whole higher-education sector when it designed the STARS credit set; the institution answers that fixed set rather than identifying its own impacts. PA-2 records a climate-vulnerability assessment and PA-3 records stakeholder consultation, but neither is a materiality process and neither should be presented as one.

Disclosure	Status	Value / reason	Notes
3-2 List of material topics	Partially reported	Has the institution adopted one or more measurable sustainability objectives that address campus operations?: Yes Has the institution adopted one or more measurable sustainability objectives that address teaching, learning, and/or research?: Yes Has the institution adopted one or more measurable sustainability objectives that address racial equity and/or social justice?: Yes Has the institution adopted one or more measurable sustainability objectives that address administration and/or finance?: Yes Has the institution adopted one or more measurable sustainability objectives that address campus and/or community engagement?: Yes	NOT A MATERIALITY DETERMINATION. These five areas are fixed by STARS and identical for every institution, so they say where an institution has set objectives, not which impacts it judged significant and why. GRI 3-2-b also requires changes against the previous reporting period, which a single STARS submission cannot show. Presenting these as material topics would overstate what the institution actually did. See the campus-operations row: fixed areas, not a materiality determination.
3-3 Management of material topics	Partially reported	Narrative listing the institution's measurable sustainability objectives that address campus operations: 1. TU Dublin Strategic Plan 2024 – 2028 (Ref 1) include clear measurable sustainability... Narrative outlining the activities and substantive accomplishments of the institution-wide coordinating body or officer during the previous three years: TU Dublin Sustainability Education team (Ref 1) is driving the sustainability transform... Has the institution made a public commitment to sustainability, as evidenced by an external commitment or a published plan?: Yes	Asked per material topic, and no material-topics list exists (see GRI 3-2) — so these are institution-wide answers to a question GRI asks topic by topic. GRI 3-3 also requires the impacts themselves (3-3-a), whether the organisation is involved through its own activities or its business relationships (3-3-b), and lessons learned (3-3-e-iv). STARS collects none of those. It reports outcomes rather than distinguishing actions that prevent potential harm from actions that remediate actual harm, which is the split GRI 3-3-d asks for.

GRI 202: Market Presence 2016

Disclosure	Status	Value / reason	Notes
202-1 Ratios of standard entry level wage by gender compared to local minimum wage	Partially reported	Percentage of employees that receive remuneration equivalent to at least a living wage: 100 Living wage: 13.85 Wage floor for regular/permanent employees: 16.53	DOES NOT SATISFY GRI 202-1. GRI wants the RATIO of standard entry-level wage to the local MINIMUM wage, BY GENDER. STARS benchmarks against a LIVING wage instead and has no gender split. Precisely: the NUMERATOR exists — PA-13's Wage floor for regular/permanent employees is the entry-level wage — but the local statutory minimum wage is not in STARS at any credit, and the gender split is not collected anywhere. Report only as a higher-education sector variant, stating plainly that 202-1 is unsatisfied. Values are bare numbers with no currency - EUR for the Irish universities, USD for Berkeley - and are not comparable across them without saying so. The DENOMINATOR is what is missing, not the numerator. STARS benchmarks against a LIVING wage, not the local statutory MINIMUM wage, and carries no minimum-wage figure at all. Supplying one would mean introducing an external constant, which is outside this project's verified-data pipeline. GRI also requires the ratio BY GENDER, which STARS does not collect at any credit — that half is unanswerable, not merely unsupplied. STARS additionally reports separate floors for short-term/casual academic and non-academic staff. Values are bare numbers: EUR for the Irish universities, USD for Berkeley, and not comparable without saying so.
202-2 Proportion of senior management hired from the local community	Not reported	No STARS data exists for this disclosure.	No STARS credit collects this.

GRI 204: Procurement Practices 2016

Disclosure	Status	Value / reason	Notes
204-1 Proportion of spending on local suppliers	Not reported	No STARS data exists for this disclosure.	

GRI 301: Materials 2016

Disclosure	Status	Value / reason	Notes
301-1 Materials used by weight or volume	Not reported	No STARS data exists for this disclosure.	This is a sector-fit finding of the same kind as AC-1 and EN-1 on the STARS side: the framework and the institution type do not line up.
301-2 Recycled input materials used	Not reported	No STARS data exists for this disclosure.	
301-3 Reclaimed products and their packaging materials	Not reported	No STARS data exists for this disclosure.	

GRI 302: Energy 2016

Disclosure	Status	Value / reason	Notes
302-1 Energy consumption within the organization	Reported	Total annual energy consumption: 38,391 Megawatt-hours Total electricity consumption: 15,053 Megawatt-hours Total stationary fuel consumption: 21,072 Megawatt-hours Annual renewable energy consumption: 8,397.21 Megawatt-hours Renewable stationary fuels: 0.21 Megawatt-hours Total heating and cooling from off-site sources: 2,266 Megawatt-hours On-site renewable electricity exported: 0 Megawatt-hours Natural gas: 21,056 Megawatt-hours Heating oil: 16 Megawatt-hours Coal/coke: 0 Megawatt-hours Propane/LPG: 0 Megawatt-hours	GRI 302-1 expects joules or multiples and requires fuel consumption split into renewable and non-renewable. STARS reports megawatt-hours - convertible, but state the conversion. SCOPE MISMATCH. GRI 302-1-b is 'Total fuel consumption from renewable sources'. This STARS field also includes renewable ELECTRICITY (Berkeley 18,173 MWh), so it is broader than GRI's line and would overstate renewable fuel. The precise match is 'Renewable stationary fuels' - see the row below, which is ~0 for all three. Use this field only for a general renewables statement, never for GRI 302-1-b. Correct but near-empty: 0.21 MWh for TU Dublin, 0 for Cork and Berkeley. A finding in itself - these universities' renewable energy is almost entirely purchased electricity, not renewable fuel. GRI 302-1-b is therefore honestly reportable as ~zero. GRI 302-1 requires joules; STARS reports MMBtu or MWh, so the value must be converted before it is cited as a GRI figure. Zero for all three institutions in the current reporting year, so the mapping is correct but currently carries no signal. GRI 302-1 expects joules; STARS reports MWh — convertible, but state the conversion. Zero at Cork; a small residual at TU Dublin and Berkeley. Units are MWh, not joules. A reported zero, not missing data. STARS also carries an Other stationary fuels catch-all, also zero everywhere, which is what makes this list of fuel types complete rather than merely partial.
302-2 Energy consumption outside of the organization	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
302-3 Energy intensity	Reported	Annual energy consumption per person: 1,520.74 Kilowatt-hours Annual energy consumption per unit of floor area: 182.05 Kilowatt-hours per square meter	Denominator (FTE students + employees) must be disclosed with the ratio. Denominator is gross floor area; must be disclosed with the ratio.
302-4 Reduction of energy consumption	Not reported	No STARS data exists for this disclosure.	
302-5 Reductions in energy requirements of products and services	Not reported	No STARS data exists for this disclosure.	

GRI 303: Water and Effluents 2018

Disclosure	Status	Value / reason	Notes
303-1 Interactions with water as a shared resource	Reported	Level of physical water quantity risk for the institution's main campus: Medium-high Does the institution harvest rainwater on-site for storage and use?: Yes	A risk grade is not the description GRI 303-1 asks for: it says nothing about how water is withdrawn, consumed or discharged, how the impacts were identified, or how the institution works with stakeholders on shared water resources. It also covers the main campus only, where a multi-campus institution has several. Only one of the three institutions quantifies the volume harvested; the other two answer the yes/no only.
303-2 Management of water discharge-related impacts	Not reported	No STARS data exists for this disclosure.	
303-3 Water withdrawal	Reported	Total water withdrawal: 56,570 Cubic meters Potable water from off-site sources: 56,570 Cubic meters Potable water from on-site sources: 0 Cubic meters	GRI 303-3 requires a breakdown by source AND a separate figure for areas with water stress. STARS collects neither, so 303-3 cannot be fully satisfied from STARS alone. UNITS: GRI 303-3 requires megaliters and STARS reports cubic meters. Divide by 1,000 before citing the figure as a GRI 303-3 value, and state the conversion — the same treatment GRI 302-1 gets for megawatt-hours against joules. Maps to the specific GRI 303-3-a-v category 'Third-party water'. It is the ONLY withdrawal source these universities have — on-site abstraction is zero for all three — so this equals the total. Zero for all three institutions, which is itself the finding: none of them abstracts its own water. Retained so the GRI 303-3 source breakdown is complete rather than silent.

Disclosure	Status	Value / reason	Notes
303-4 Water discharge	Not reported	Assessed: the nearest STARS field (OP-3 / Annual volume of water recovered and/or returned) was reviewed and rejected as an answer to this disclosure.	GRI 303-4 requires discharge by destination, freshwater/other water split, and treatment level. STARS captures none of that. Weak mapping - verify before use.
303-5 Water consumption	Not reported	Assessed: the nearest STARS field (OP-3 / Annual potable water use) was reviewed and rejected as an answer to this disclosure.	DEFINITIONS DIFFER. GRI 303-5 water consumption = withdrawal minus discharge. STARS 'annual potable water use' is potable supply only and is not computed that way. Do not present this as GRI 303-5 without recomputing.

GRI 305: Emissions 2016

Disclosure	Status	Value / reason	Notes
305-1 Direct (Scope 1) GHG emissions	Reported	Scope 1 GHG emissions from stationary combustion: 3,728 Metric tons of CO2 equivalent Scope 1 GHG emissions from mobile combustion: 2 Metric tons of CO2 equivalent Scope 1 GHG fugitive emissions: 55 Metric tons of CO2 equivalent Scope 1 GHG process emissions: 0 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-1 additionally requires biogenic CO2 to be reported separately from the gross figure. GRI asks for biogenic CO2 specifically; the STARS field is CO2-equivalent and may not be the same boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-1-e) and the consolidation approach (305-1-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 1 GHG emissions; OP-6 / GHG emissions from biogenic sources.

Disclosure	Status	Value / reason	Notes
305-2 Energy indirect (Scope 2) GHG emissions	Reported	Scope 2 GHG emissions from off-site sources of electricity (market-based): 4,992 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of electricity (location-based): 0 Metric tons of CO2 equivalent Scope 2 GHG emissions from off-site sources of heating and cooling: 181 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and... Description of the methodology or calculator used to conduct the scope 1 and 2 GHG emissions inventory: Calculation followed the GHG Protocol Corporate Standard. Consolidated data from Gas bi...	GRI 305-2 requires location-based and, where available, market-based figures reported separately. Do not present a single scope 2 number without saying which method. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. So it answers 305-1-d-ii and 305-2-d-ii only as a combined total, which is weaker than either disclosure asks for on its own. GRI additionally requires the source of the emission factors and GWP rates (305-2-e) and the consolidation approach (305-2-f); STARS collects neither. Not populated by this institution: OP-6 / Annual scope 2 GHG emissions.

Disclosure	Status	Value / reason	Notes
305-3 Other indirect (Scope 3) GHG emissions	Reported	Scope 3 GHG emissions from business travel: 410 Metric tons of CO2 equivalent Scope 3 GHG emissions from commuting: 10,694 Metric tons of CO2 equivalent Scope 3 GHG emissions from purchased goods and services: 26,269 Metric tons of CO2 equivalent Scope 3 GHG emissions from capital goods: 83 Metric tons of CO2 equivalent Scope 3 GHG emissions from waste generated in operations: 9 Metric tons of CO2 equivalent Scope 3 GHG emissions from fuel- and energy-related activities not included in scope 1 or scope 2: 0 Metric tons of CO2 equivalent	
305-4 GHG emissions intensity	Reported	Annual scope 1 and 2 GHG emissions per person: 354.84 Kilograms of CO2 equivalent Annual scope 1 and 2 GHG emissions per unit of floor area: 42.48 Kilograms per square meter	GRI 305-4 requires the denominator to be stated. Here it is FTE students + employees, not a corporate revenue or output metric. Denominator is gross floor area in square meters; must be disclosed alongside the ratio.

Disclosure	Status	Value / reason	Notes
305-5 Reduction of GHG emissions	Reported	Percentage reduction in scope 1 and 2 GHG emissions from baseline: 10.99 Baseline scope 1 and 2 GHG emissions: 10,064 Metric tons of CO2 equivalent Baseline year for scope 1 and 2 GHG emissions: 2018 Narrative outlining when and why the GHG emissions baseline was adopted: 2016-2018 Period when electricity and gas data start to be consistent between bills and...	GRI 305-5 asks for reductions as an ABSOLUTE quantity in metric tons CO2e; STARS gives a percentage. Not directly substitutable - derive the absolute figure from the baseline and current fields. Derive it; do not present the baseline itself as a reduction. The subtraction is only valid because both figures cover the same combined scope 1 + 2 boundary. STARS reports ONE baseline covering scope 1 and scope 2 together. GRI states the base year separately for 305-1 and 305-2, so this figure serves both jointly and neither alone — it cannot be split. GRI 305-5-b (gases included) and 305-5-d (which scopes the reductions occurred in) remain unanswered — STARS reports the reduction against the combined scope 1 + 2 total without attributing it to either.
305-6 Emissions of ozone-depleting substances (ODS)	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no ODS data at any credit. Cannot be reported from this dataset.
305-7 Nitrogen oxides (NOx), sulfur oxides (SOx), and other significant air emissions	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no criteria-air-pollutant data. Cannot be reported from this dataset.

GRI 306: Waste 2020

Disclosure	Status	Value / reason	Notes
306-1 Waste generation and significant waste-related impacts	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
306-2 Management of significant waste-related impacts	Reported	Does the institution have a surplus program through which institution-owned items that are no longer needed are stored for eventual sale, donation, or reuse?: Yes Does the institution have or participate in a reuse program through which employees and/or students can donate personal items for redistribution?: Yes Has the institution eliminated the on-site use of at least one form of single-use disposable plastic?: Yes Does the institution have a hazardous waste management program or protocol that includes measures to minimize or reduce the use of hazardous materials?: Yes Narrative and/or website URL providing an overview of the institution's composting program: Some of TU Dublin food service providers provide compostable alternatives to single-use... Does the institution have sufficient data on construction and demolition waste to pursue this indicator?: Yes	GRI 306-3 additionally requires hazardous waste to be quantified separately from non-hazardous. STARS quantifies only non-hazardous and construction-and-demolition waste, so the tonnage is unavailable. It states data sufficiency as a yes/no rather than describing the collection process, and covers construction and demolition waste only.
306-3 Waste generated	Reported	Annual non-hazardous waste generated: 1,768.85 Metric tons Annual construction and demolition waste generated: 1,244.08 Metric tons	NOT EQUIVALENT - a subset. GRI 306-3-a is TOTAL waste generated including hazardous, broken down by composition. STARS reports non-hazardous only and collects no hazardous tonnage at any credit, so 306-3 cannot be fully satisfied. Do not present non-hazardous waste as the organisation's total waste. (Contrast the 306-4 and 306-5 rows, which are component : GRI has explicit non-hazardous lines at 306-4-c and 306-5-c for the STARS figures to answer, whereas 306-3 has no non-hazardous sub-requirement at all — which is why this row is weaker than those two, not equal to them.)

Disclosure	Status	Value / reason	Notes
306-4 Waste diverted from disposal	Reported	Total non-hazardous waste diverted from disposal: 1,452.64 Metric tons Non-hazardous waste recycled: 691.73 Metric tons Non-hazardous waste composted: 56.01 Metric tons Non-hazardous waste prepared for reuse: 704.90 Metric tons Total construction and demolition waste diverted from disposal: 1,121.85 Metric tons Construction and demolition waste recycled: 531.95 Metric tons	Exact scope match on GRI 306-4-c, including its split by recovery operation (reuse / recycling / other) from the rows below. GRI 306-4-d additionally wants each operation split on-site vs off-site, which STARS does not collect. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.
306-5 Waste directed to disposal	Reported	Non-hazardous waste disposed of to a landfill or incinerator: 316.21 Metric tons Construction and demolition waste disposed of to a landfill or incinerator: 122.23 Metric tons	WEAKER THAN THE 306-4 EQUIVALENT: GRI 306-5-c also requires the total split across four disposal operations — incineration with energy recovery, incineration without, landfilling, other — and STARS merges landfill and incineration into a single figure. The waste-to-energy percentage field would separate incineration with recovery, but only two of the three institutions report it, so the split cannot be derived consistently. NOT THE WHOLE DISCLOSURE: the hazardous half is absent. STARS weighs no hazardous waste anywhere — OP-11 records only whether a hazardous-waste programme exists and describes it in prose. For a research university that is a materially significant stream going unreported, and it is a finding about STARS rather than about these institutions.

GRI 308: Supplier Environmental Assessment 2016

Disclosure	Status	Value / reason	Notes
308-1 New suppliers that were screened using environmental criteria	Partially reported	Does the institution's supplier code of conduct include one or more expectations in regard to environmental impact that exceed or are additional to regulatory compliance?: Yes Percentage of bid solicitations that identify supplier sustainability considerations: 0	GRI 308-1 requires a percentage of new suppliers actually screened. STARS reports the existence of the criteria, not their application to any supplier, so no percentage can be derived. The denominator is bid solicitations, not new suppliers, and one solicitation may attract many suppliers or none. 'Sustainability considerations' is also broader than the environmental criteria GRI 308-1 specifies. The figure is 0 percent at TU Dublin, so a low value here should not be read as a screening failure without checking the product-specification field alongside it.

Disclosure	Status	Value / reason	Notes
308-2 Negative environmental impacts in the supply chain and actions taken	Not reported	No STARS data exists for this disclosure.	

GRI 401: Employment 2016

Disclosure	Status	Value / reason	Notes
401-1 New employee hires and employee turnover	Not reported	No STARS data exists for this disclosure.	STARS 3.0 collects no hiring or turnover figures.
401-2 Benefits provided to full-time employees that are not provided to temporary or part-time employees	Partially reported	Percentage of employees eligible for paid all-gender family/medical leave: 100	GRI 401-2 turns on the contrast between full-time employees and temporary or part-time employees, and asks for the benefits by significant location of operation. STARS gives a single institution-wide eligibility rate with no employment-type split, so the comparison the disclosure exists to make cannot be drawn.
401-3 Parental leave	Partially reported	Number of weeks of paid maternity leave: 26 Narrative and/or website URL providing an overview of the maternity leave options available to employees: The Maternity Protection Acts cover the entitlements for allstaff who are pregnant, hav...	GRI 401-3 requires headcounts by gender: employees entitled to parental leave, those who took it, those who returned, those still employed twelve months later, and the resulting return-to-work and retention rates. STARS reports none of these — it reports the policy, not its uptake. 'Maternity' is also narrower than GRI's 'parental'. Descriptive only; supplies none of the headcounts or rates GRI 401-3 requires.

GRI 403: Occupational Health and Safety 2018

Disclosure	Status	Value / reason	Notes
403-1 Occupational health and safety management system	Partially reported	Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	STARS never asks the 403-1 question, so an answer only appears where the institution volunteered it. Nothing records whether the system exists because of a legal requirement, which standard it follows, or which workers, activities and workplaces it covers — that is 403-1-b, and it is absent.
403-2 Hazard identification, risk assessment, and incident investigation	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
403-3 Occupational health services	Partially reported	Does the institution make physical health services available to employees?: Yes	General employee health services are not occupational health services: GRI 403-3 is about the function that identifies and eliminates workplace hazards, and about how worker health data is kept confidential. STARS asks about neither.
403-4 Worker participation, consultation, and communication on occupational health and safety	Reported	Does the institution have an institution-wide health and safety committee or network of committees that brings together workers and management in the development and review of workplace health and safety policies and procedures?: Yes Narrative and/or website URL providing an overview of the institution's workplace health and safety committees: TU Dublin has established a comprehensive safety management system (Ref 1) that include...	GRI 403-4-b further requires the committee's responsibilities, meeting frequency, decision-making authority, and whether any workers are unrepresented. STARS records existence only. Depth varies by institution; meeting frequency and decision-making authority are not consistently stated.
403-5 Worker training on occupational health and safety	Not reported	No STARS data exists for this disclosure.	
403-6 Promotion of worker health	Reported	Does the institution make physical health services available to employees?: Yes Does the institution make behavioral health services available to employees?: Yes Does the institution make free or reduced cost fitness activities available to employees?: Yes Does the institution prohibit smoking and tobacco use across the entire campus?: Yes Does the institution make contemplative and/or spiritual activities available to employees?: Yes	GRI 403-6-a also requires the scope of access provided; STARS records availability as a yes/no, with the scope left to the narrative. A prohibition is a control rather than a voluntary promotion service; STARS also records the weaker variants (indoor-only, restricted outdoor smoking) in separate fields.
403-7 Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	Not reported	No STARS data exists for this disclosure.	
403-8 Workers covered by an occupational health and safety management system	Not reported	No STARS data exists for this disclosure.	

Disclosure	Status	Value / reason	Notes
403-9 Work-related injuries	Not reported	No STARS data exists for this disclosure.	PA-11 (Health, Safety and Wellbeing) contains no injury figures - its only numeric fields are STARS scoring artefacts. Cannot be reported.
403-10 Work-related ill health	Not reported	No STARS data exists for this disclosure.	PA-11 contains no ill-health figures. Cannot be reported.

GRI 405: Diversity and Equal Opportunity 2016

Disclosure	Status	Value / reason	Notes
405-1 Diversity of governance bodies and employees	Reported	Ethnic diversity index for executive staff: 0 Revised on Nov. 24, 2025 Percentage of executive staff that identify as women or other marginalized gender identities: 41.09 Percentage of regular/permanent academic staff that identify as women or other marginalized gender identities: 41.55 Percentage of regular/permanent non-academic staff that identify as women or other marginalized gender identities: 56.40 Ethnic diversity index for academic staff: 0 Revised on Nov. 24, 2025 Ethnic diversity index for non-academic staff: 0 Revised on Nov. 24, 2025	This is a diversity INDEX (a single 0-1 concentration score), not the percentage breakdown GRI 405-1-b asks for. It shows how mixed the group is, not what share each group holds. No STARS credit collects employee age at all, so GRI 405-1's age-group split (under 30 / 30-50 / over 50) is unanswerable for every employee category. 405-1-a is still not answered: STARS PA-3 records which constituencies are represented on the highest decision-making body, never what percentage of that body they make up. DATA QUALITY: TU Dublin's value is the string '0 Revised on Nov. 24, 2025' — annotation text concatenated onto the figure — so the field is typed <code>text</code>, not <code>number</code>, and will not parse. Cork and Berkeley are clean. STARS reports one combined figure for 'women or other marginalized gender identities' rather than a percentage per gender, so the split GRI asks for is two buckets, not three.

Disclosure	Status	Value / reason	Notes
405-2 Ratio of basic salary and remuneration of women to men	Not reported	No STARS data exists for this disclosure.	STARS FIELDS: nothing. PA-13 covers living-wage coverage and wage floors, not a gender pay ratio — despite the credit being named 'Pay Equity'. BUT the evidence documents linked from STARS answers partially close this: UCC publishes V3EDIGenderPayGapReport2025.pdf and TU Dublin Gender-Pay-Gap-Report-2023-FINALv1.pdf, both stating a mean gender pay gap. Berkeley links no equivalent. NOT a substitute for 405-2: GRI wants the ratio of basic salary and remuneration of women to men PER EMPLOYEE CATEGORY and per significant location; these reports give one organisation-wide percentage. Reportable as context with the source named, for 2 of 3 institutions, and it must be read out of the PDF by a human — it is not in any structured field, so it cannot go through the Jinja2 number path.

Verifying this report

Every figure above is recorded in `report/output/index_provenance.csv` with the exact STARS credit and field it came from, so any number can be traced to a row of the source dataset without trusting the generator. `tests/test_content_index.py` re-derives them independently of the code that produced them.
